10. Keep container closed.

### STOP USE AND ASK DOCTOR

If you experience chest pain, a rapid heart beat, faintness, or dizziness, or if scalp irritation or redness occurs. These may be signs of a serious condition.

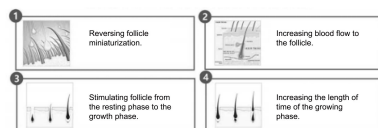

### DOES BIOTIN HELP PREVENT HAIR LOSS?

Biotin, also known as vitamin B7, stimulates keratin production in hair and can increase the rate of follicle growth. The biotin can help make your hair stronger and more resistant to falling out.

### HOW DOES 5% MINOXIDIL WORK?

The 5% Minoxidil is a treatment used widely by men and women with hair loss. Minoxidil is designed to dilate blood vessels and improve the flow of blood to the areas it's applied. It improves their ability to deliver nutrients and oxygen to the hair follicles. Minoxidil also helps increase the size of hair follicles, which promotes the growth of thicker, longer hairs. In addition, the topical treatment shortens the resting (anagen) phase of hair growth, which means your hair stays in the growth (anagen) phase longer.

### CLINICALLY PROVEN TO STRENGTHEN AND REGROW HAIR

### HOW TO USE

1. Wash your hair before use.
2. Apply 1ML of serum on your scalp affected area.
3. Massage evenly and thoroughly into the scalp until you feel the serum has been absorbed (2-3 minutes).
4. For best result, use twice daily on clean dry hair.

### APPLICATION AREAS

Areas that need thicker, stronger hair, e.g. hair, beard.

### HOW LONG UNTIL YOU SEE MINOXIDIL RESULTS?

Because of minoxidil's mechanism of action, you won't experience immediate hair growth after you start using this medication. Instead, you may shed slightly more hair than normal during the first few weeks of treatment with minoxidil. This is because your hairs need to rapidly go through the telogen and shedding phases of the hair growth cycle before starting the anagen phase, and then begin a new anagen phase.

Most research shows that it takes a few months before you'll noticeably improvements in your hair after you start using minoxidil. Although results can vary from one person to another, you should generally expect to see some improvement from minoxidil after about three to six months, with more significant results after a full year or 2 years of treatment.

### WHEN TO APPLY 5% MINOXIDIL SERUM AFTER DERMAROLLER?

In fact, research shows that microneedling and 5% minoxidil are actually more effective at reducing hair loss and improving hair growth when used together. But please don't apply minoxidil right after!

It is advised not to apply 5% minoxidil serum on the day of microneedling treatment, but apply 5% minoxidil about 24 hours after microneedling. Because if you do it right after, minoxidil can easily pass through your skin barrier in greater quantities and enter the blood stream. While this can increase the potency of minoxidil on the scalp, you can also experience side effects of minoxidil. You'll still get boost in your hair regrowth if you apply Minoxidil 24 hours later, so don't rush with it.
