**A PIONEER IN SUN PROTECTION RESEARCH FOR OVER 30 YEARS**

Every day, dermatologists observe skin damage caused by UVA and UVB rays.

UVB rays mainly cause **Burning**. They cause tanning and are mainly responsible for sunburn. SPF or "Sun Protection Factor" is the degree of protection a sunscreen offers against UVB rays.

UVA rays mainly cause **Skin Aging** or Sun Allergies. UVA rays directly contribute to skin aging (wrinkles, sagging, dark spots) and are the #1 cause of sun intolerances (allergies).

Both UVA and UVB rays have been proven to cause damage to skin cells, including DNA, and can weaken the immune system. This damage can potentially lead to the development of skin cancer.

La Roche-Posay is dedicated to providing photostable, broad-spectrum protection through the use of **CELL-OX SHIELD**, a synergistic combination of UVA/UVB filters combined with antioxidants.
