Numbing cream is a topical anesthetic that is applied to the skin to reduce pain and discomfort during some procedures such as hair removal and tattooing. The cream works by blocking the transmission of nerve impulses, which numbs the area and reduces pain.

Due to the difference in temperature and skin type, the duration of the numbness effect will be different. Recommended to test in a small area first to ensure the best numbness effect. (The longer the wrap time, the better effect)

If the product does not work well or you have any problem with using the product, please contact us immediately through email at service@Jakwork.com. Surely we will give you a 100% satisfactory solution.
