

Chemical Structure: C1=CC=C(C=C1)C(=O)O (Benzoic acid)

Properties: Benzoic acid is a white crystalline solid with a melting point of 122.5 °C and a boiling point of 249 °C. It is soluble in organic solvents like benzene and ether, but only slightly soluble in water.

Uses: It is used in the synthesis of pharmaceuticals, dyes, and polymers. It is also used as a preservative in food and as a component in perfumes.

Environmental Impact: Benzoic acid is biodegradable and is not considered highly toxic. However, it can be harmful to aquatic life in high concentrations.

Health Effects: It is generally safe for consumption in small amounts, but it can cause irritation to the skin and respiratory system in higher concentrations.
