DIRECTIONS FOR USE

For Use As An Udder Wash: Note: The laws in some states require that the sanitizing solution remain in contact with the surface for two minutes. Follow the recommendations of your health department.

Not to be used as a teat dip. Always use fresh solution. Prepare a wash solution using 1 ounce **UDDERDYNE**[®] to each 5 gallons of lukewarm water (100°F). This solution provides 25 ppm Iodine. For a 50 ppm titratable Iodine solution, blend 1 oz. of **UDDERDYNE** to 2 1/2 gallons of water. Dip a single-service paper or cloth towel into wash solution and wash teats to the base of the udder. Forestrip. Dry teat with individual paper or cloth towel. Attach milker unit. Prepare a fresh solution if wash solution fades noticeably or becomes diluted or soiled.

Undiluted product may undergo an increase in viscosity when exposed to cold temperatures. Pumps must be recalibrated in those conditions to maintain accurate dosing. If product freezes, thaw it completely and mix properly before use. Consult your DeLaval representative for questions on specific applications.
