Always use caution when introducing your cows to a new teat dip.

Remember these industry quidelines:

Replace dip cups and/or clean dip lines
When introducing a new dip to a dairy herd, always replace dip cups and/or brushes to prevent the new dip
from mixing with the old dip. If spray or dip pumps are used, lines should be flushed with hot water to clean
out any residues of the old dip.

Aggressively remove keratin and exfoliated skin from teats.

A temporary exfoliation of dead teat skin is common after new dips are introduced. Be sure to aggressively clean teats to remove exfoliated skin and clean teat so muse that the dead skin is removed.

Monitor cows for changes in skin condition Many text dips are designed with emollients and other skin conditioning ingredients to maintain healthy text skin and fight germs. Rare text skin reactions due to allergic or environmental conditions may occur. Closely monitor text skin whenever a new dip is introduced. If unusual skin conditions are found, monitor closely and, if persistent, replace dip with one containing a different germicide and/or emollient formula.

Siempre tener cuidado al usar un nuevo sellador de pezones en las vacas.

Tomar en cuenta las siguientes recomendaciones de la industria:

Usar tazas del sellador limpias y/o limpiar los tubos del rociador del sellador Cuando seusa un nuevo sellador de pezones en las vacas, se deben siempre reempiazar las tazas de aplicación del sellador y también los segilos para evitar la meccia del sellador anterior con el nuevo. Si se usan rociadores o bombas selladoras, limpiar los tubos con a qua caliente para retirar cualquier residuo del sellador anterior.

Limpiar fuertemente los pezones para retirar la keratina y las escamas Cuando se usa un nuevo sellador en las vacas, es necesario la exfoliación de las escamas que pueden formar en la piel. Limpiar bien fuertemente los pezones y extremos del pezón para eliminar las escamas en la piel.

Controlar las vacas y observar los cambios de condición de la piel Muchos selladores de pezones contienen emolientes y otros ingredientes acondiconadores de la piel para la

mantención saludable de la piel del pezón y para la de trucción de gérmenes patógenos. Ocasi podrá no restruccion salutuante de la piet de present y pará a in existrucción de germenes patogentos. Vicadorian immene, se podrán producir reacciones alérgicas o ambientales por lo que se debe controlar de cerca la piet de los pezones cuando se usa un nuevo sellador. Si se presenta cuanquier condición inusual persistente de la piet, reemplaza el sellador con torto que contenga una fórmula con diferente germicida o emolente.
