Vitamin E+AD

Vitamin E+AD

Injectable Tocopherol + AD

(Vitamin A, D_3 , and E)

INTRAMUSCULAR OR SUBCUTANEOUS INJECTION ONLY

Indications: Vitamin E+AD AD is a clear, sterile, non-aqueous solution of vitamin A, vitamin D_3 , and vitamin E. The product is intended as a supplemental source of vitamins A, D and E in cattle.

Natural vitamin A (carotenes), and tocopherols can be destroyed in feedstuffs through processing, ensiling and storage. Due to these losses, reduced intakes of fat-soluble vitamins can occur in animals maintained in continual confinement compared to animals allowed to graze in lush pasture. Intramuscular or subcutaneous injections offer an efficient and rapid method to increase vitamin A, vitamin D and Vitamin E status of animals.

Each mL contains:

ACTIVE INGREDIENTS: 300IU's vitamin E (as d-alpha-tocopherol, a natural source of vitamin E); 100,000 IU's Vitamin A Propionate:; 10,000 IU's Vitamin D_{3} .

INACTIVE INGREDIENTS: 2% benzyl alcohol (preservative) in a water emulsifiable base.

Caution:

Do not exceed recommended dosage. Occasionally, reactions of an anaphylactic or allergic nature may occur. Should such reactions occur, treat immediately with injection of epinephrine or antihistamines. Administration of this product to well nourished animals may cause hypervitaminosis D which may result in hypercalcemia.

Warning:

Do not add water to solution.

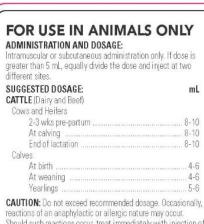

FOR USE IN ANIMALS ONLY
KEEP OUT OF REACH OF CHILDREN
TAKE TIME
OBSERVE LABEL DIRECTIONS

Store between 15°-30°C (59°-86°F) in a dark place.

ADMINISTRATION AND DOSAGE:

Intramuscular or Subcutaneous Administration Only. May be repeated. If dose is greater than 5 mL, equally divide the dose and inject at two different sites.

SUGGESTED DOSAGE:	mL	
CATTLE (Dairy and Beef)		
Cows and Heifers		
2-3 wks pre-partum	8-10	
At calving		
End of lactation	8-10	
Calves		
At birth	4-6
