

IVERMECTIN- ivermectin paste
Stellarnet Limited

PawBliss

Anthelmintic and Boticide
Ivermectin Horse Paste 1.87

For Oral Use in Horses Only

IVERMECTIN

(ivermectin paste) 1.87%

Net Wt. 0.21 oz (6.08 g)

Contents treat up to 1,250 lb body weight

Approved by FDA under ANADA # 200-326

Apple Flavored

Removes worms and bots with a single dose.

INDICATIONS: Consult your veterinarian for assistance in the diagnosis, treatment, and control of parasitism. Ivermectin paste provides effective treatment and control of the following parasites in horses: large strongyles (adults), including *Strongylus vulgaris* (including early forms in blood vessels), *S. edentatus* (including tissue stages), *S. equinus*, *Triodontophorus* spp. including *T. brevicauda* and *T. serratus*, and *Craterostomum acuticaudatum*; small strongyles (adults, including those resistant to some benzimidazole-class compounds), including *Coronocylus* spp. (*C. coronatus*, *C. labratus*, and *C. labiatus*), *Cyathostomum* spp. (*C. catinatum* and *C. pateratum*), *Cylicocylus* spp. (*C. insignis*, *C. leptostomum*, *C. nassatus*, and *C. brevicapsulatus*), *Cylicodontophorus* spp., *Cylicostephanus* spp. (*C. calicatus*, *C. goldi*, *C. longibursatus*, and *C. minutus*), and *Poteriostomum* spp.; small strongyles (fourth-stage larvae); pinworms (adults and fourth-stage larvae), *Oxyuris equi*; ascarids (adults and third- and fourth-stage larvae), *Parascaris equorum*; hairworms (adults), *Trichostrongylus axei*; large-mouthed stomach worms (adults), *Habronema muscae*; bots (oral and gastric stages), *Gasterophilus* spp. including *G. intestinalis* and *G. nasalis*; lungworms (adults and fourth-stage larvae), *Dictyocaulus arnfieldi*; intestinal threadworms (adults), *Strongyloides westeri*; summer sores caused by *Habronema* and *Draschia* spp. (cutaneous third-stage larvae); and dermatitis caused by neck threadworm microfilariae (*Onchocerca* spp.).

DOSAGE: This syringe contains sufficient paste to treat one 1,250 lb horse at the recommended dose rate of 91 mcg ivermectin per lb (200 mcg/kg) of body weight. Each weight marking on the syringe plunger delivers sufficient paste to treat 250 lb of body weight. Do not underdose. Ensure each animal receives a complete dose based on a current body weight. Underdosing may result in ineffective treatment and may encourage the development of parasite resistance.

PARASITE CONTROL PROGRAM: All horses should be included in a regular parasite control program, with particular attention given to mares, foals, and yearlings. Foals should be treated initially at 6 to 8 weeks of age, with routine treatments repeated as appropriate. Consult your veterinarian to develop a parasite control program that meets

your specific needs. Ivermectin paste effectively controls gastrointestinal nematodes and bots of horses. Regular treatment reduces the likelihood of verminous arteritis caused by *Strongylus vulgaris*.

PRODUCT ADVANTAGES: Broad-spectrum control — ivermectin paste eliminates important internal parasites of horses, including bots and the arterial stages of *Strongylus vulgaris*, with a single dose. Ivermectin is a potent antiparasitic agent that is neither a benzimidazole nor an organophosphate.

ANIMAL SAFETY: Ivermectin paste may be used in horses of all ages, including mares at any stage of pregnancy. Stallions may be treated without adversely affecting fertility.

STORAGE INFORMATION: Store at 68°F to 77°F (20°C to 25°C). Excursions between 59°F and 86°F (15°C to 30°C) are permitted.

ADMINISTRATION:

1. While holding the plunger, turn the knurled ring on the plunger one-quarter (1/4) turn to the left and slide it to the position corresponding to the prescribed weight, aligning the arrow on the ring with the line between the weight marking and “lb,” as shown in the pictogram.
2. Lock the ring in place by making a one-quarter (1/4) turn to the right. Ensure that it is locked and no longer slides.
3. Ensure that the horse’s mouth contains no feed.
4. Remove the cover from the tip of the syringe.
5. Insert the syringe tip into the horse’s mouth at the space between the teeth.
6. Depress the plunger as far as it will go, depositing the paste on the back of the tongue.
7. Immediately raise the horse’s head for a few seconds after dosing.

WARNING: Do not use in horses intended for human consumption. **Not for use in humans. Keep this and all drugs out of the reach of children.** Refrain from smoking or eating when handling this product. Wash hands after use. Avoid contact with eyes.

PRECAUTIONS: Ivermectin paste has been formulated specifically for use in horses only. This product should not be used in other animal species, as severe adverse reactions, including fatalities in dogs, may result.

OTHER WARNINGS: Parasite resistance may develop to any dewormer. Resistance has been reported for most classes of dewormers. Frequent treatment with a dewormer, used in conjunction with parasite management practices appropriate to the geographic area and the animal(s) to be treated, may slow the development of parasite resistance. Clinical examinations, diagnostic tests, and parasite management history should be used to determine whether this product is appropriate for the herd prior to the use of any dewormer. Following the use of any dewormer, the effectiveness of treatment should be monitored (for example, through fecal egg count reduction tests or other appropriate methods). A decrease in a drug's effectiveness over time, as determined by fecal egg count reduction tests, may indicate the development of resistance to the dewormer administered. Parasite management programs should be adjusted accordingly based on regular monitoring.

ENVIRONMENTAL SAFETY: Ivermectin and excreted ivermectin residues may adversely affect aquatic organisms. Do not contaminate ground or surface water. Dispose of the syringe in an approved landfill or by incineration.

INFORMATION FOR HORSE OWNERS: Swelling and itching reactions after treatment with ivermectin paste have occurred in horses carrying heavy infections of neck threadworm (*Onchocerca* spp.) microfilariae. These reactions are most likely the result of microfilariae dying in large numbers. Symptomatic treatment may be advisable. Consult your veterinarian should any such reactions occur. Healing of summer sores involving extensive tissue changes may require additional appropriate therapy in conjunction with treatment with ivermectin paste. Reinfection and measures for its prevention should also be considered. Consult your veterinarian if the condition does not improve.

IVERMECTIN

(ivermectin PASTE 1.87%)

INDICATIONS: Consult your veterinarian for assistance in the diagnosis, treatment, and control of parasitic infestations in horses. Large Strongids (adults) strongid plus tablets (also early forms in blood vessels). Small Strongids (adults) strongid plus tablets (also early forms in blood vessels). Sideratus (also tissue stages), S. equinus, Trichostrongylus axei, pinworms, C. irritans, C. oedematis, C. punctum, Cylicodontophorus, including C. cyathostomus, C. leptocephalus, C. nasalis, and Cheilosporous, Cyclospora spp., Gyrodactylus spp., Cyathostomus, Gasterophilus, including G. intestinalis and G. nasalis, Lungworms (adults and fourth stage larvae), Dictyocaulus viviparus, Pinworms (adults and third-stage larvae), Pinworms (adults and third-stage larvae), Stomach Worms (adults), Habronema muscae, Bots (larvae and pupae stages), Gasterophilus spp. including G. intestinalis and G. nasalis, Lungworms (adults and fourth stage larvae), Dictyocaulus viviparus, Intestinal Threadworms (adults), Strongylidae weevils, Summer Sores caused by Habronema muscae and Dracina spp., cutaneous third stage larvae, Dermatitis caused by neck threadworm microfilariae, Onchocerca sp.

DOSEAGE: This syringe contains sufficient paste to treat one 1250 lb horse at the recommended dose rate of 0.1 mcg ivermectin per lb (0.03 mg/kg) body weight. Each

weight marking on the syringe plunger delivers enough paste to treat 250 lb body weight. Do not overdose. Ensure each animal receives a complete dose based on a current body weight. Underdosing may result in ineffective treatment, and encourage the development of parasite resistance.

PARASITE CONTROL PROGRAM: All horses should be included in a regular parasite control program with particular attention being paid to mares, foals and yearlings. Foals should be treated orally every 6-8 weeks of age, and routine treatment repeated as appropriate. Consult your veterinarian for a control program to meet your specific needs. Ivermectin (PawBiss) effectively controls gastrointestinal nematodes and bots of horses. Regular treatment will reduce the chances of verminous artemias caused by Strongylus vulgaris.

PRODUCT ADVANTAGES: Broad-spectrum control - PawBiss kills important internal parasites, including bots and the aerial stages of S. vulgaris, with a single dose. PawBiss is a potent antiseptic agent that is neither bacteriocidal nor an organophosphate.

ANIMAL SAFETY: PawBiss (ivermectin paste) may be used in horses of all ages, including mares at any stage of pregnancy. Stallions may be treated without adversely affecting their fertility.

STORAGE INFORMATION: Store at 68°F - 77°F (20°C - 25°C), excursions between 59°F - 87°F (-15°C - 30°C) permitted.

ADMINISTRATION:

- (1) While holding plungers, turn the knurled ring on the plunger 1/4 turn to the left and slide it to the side nearest the barrel so as the prescribed weight marking, aligning the arrow on the ring to the line between the weight and lbs, as shown in the picturegram.
- (2) Lock the ring in place by making a 1/4 turn to the right. Ensure it is locked (it should no longer slide).
- (3) Make sure that the horse's mouth remains closed.
- (4) Remove the cover from the tip of the syringe.
- (5) Insert the syringe tip into the horse's mouth at the space between the teeth.
- (6) Depress the plunger as far as will go, depositing paste on the back of the tongue.
- (7) Immediately raise the horse's head for a few seconds after dosing.

WARNING: Do not use in humans intended for human consumption Not for use in horses. Keep this and all drug out of reach of children. Before feeding or eating when handling. Wash hands after use. Avoid contact with eyes.

PRECAUTIONS: PawBiss (ivermectin paste) has been formulated specifically for use in horses only. This product should not be used in other animal species as severe adverse reactions, including fatalities, have occurred.

OTHER WARNINGS: Parasite resistance may develop if any dewormer practice has been reported for most classes of deworming. Infection with a dewormer used in conjunction with parasite management practices appropriate to the geographic area and the animals to be treated may slow down the development of parasite resistance. Clinical efficacy against other diastrophic pests and parasites may vary. The veterinary should be determined if the product is appropriate for the herd, prior to the use of any dewormer. Following the use of any dewormer, effectiveness of treatment should be monitored (for example, with the use of fecal egg count reduction tests or another appropriate test). A decrease in a drug's effectiveness over time as calculated by fecal egg count reduction tests may indicate the development of resistance to the dewormer administered. Your parasite management plan should be adjusted accordingly based on regular monitoring.

Environmental Safety: Ivermectin and excipients (ivermectin residues may adversely affect aquatic organisms. Do not contaminate ground or surface water. Dispose of the syringe in an approved landfill or by incineration.

INFORMATION FOR HORSE OWNERS: Swelling and itching reactions after treatment with PawBiss (ivermectin paste) have occurred in horses carrying heavy infections of neck threadworms (*Onchocerca* sp.) microfilariae. These reactions were most likely the result of microfilariae dying in large numbers. Symptomatic treatment may be advisable; consult your veterinarian should any such reactions occur. Healing of summer sores involving extensive tissue changes may require other appropriate therapies combined with treatment with PawBiss. Reinfestation, and measures for its prevention should also be considered. Consult your veterinarian if this condition does not improve.
