Positions for using this enema

Left-side position: Lie on left side with knees bent and arms resting comfortably.

Knee-chest position: Kneel, then lower head and chest forward until left side of face is resting on surface with left arm folded comfortably.

How to use this enema

- Remove the peel-away safety seal and protective shield
- Hold bottle upright, grasping bottle cap with fingers. Grasp protective shield with other hand and pull gently to remove.

Administering an enema:

- With a steady pressure, gently insert enema tip into rectum with a slight side-to-side movement, with tip pointing toward navel. Insertion may be easier if person receiving enema bears down, as if having a bowel movement. This helps relax the muscles around the anus.
- Do not force the enema tip into rectum as this may cause injury.
- Squeeze bottle until nearly all liquid is gone. It is not necessary to empty bottle completely, as it contains more liquid than needed.
- Remove tip from rectum and maintain position until target evacuation is strong (usually 2 to 15 minutes).
- Discontinue use if resistance is encountered, forcing the enema can result in injury.
- Retain enema in accordance with doctor's instructions.

Bottle, cap, and shield are NOT MADE WITH NATURAL RUBBER LATEX
