ANDA 200484

Caraco Pharmaceutical Laboratories, Ltd.
U.S. Agent for: Sun Pharma Global FZE
Attention: Kalpana R. Vanam
Vice President, Regulatory Affairs
270 Prospect Plains Road
Cranbury, NJ 08512

Dear Madam:

This is in reference to your abbreviated new drug application (ANDA) dated September 29, 2009, submitted pursuant to section 505(j) of the Federal Food, Drug, and Cosmetic Act (the Act), for Niacin Extended-release Tablets USP, 500 mg and 1000 mg.

Reference is also made to the Tentative Approval letter issued on June 10, 2013, and to your amendments dated March 21, and April 2, 2014

We have completed the review of this ANDA and have concluded that adequate information has been presented to demonstrate that the drug is safe and effective for use as recommended in the submitted labeling. Accordingly the ANDA is approved, effective on the date of this letter. The Division of Bioequivalence has determined your Niacin Extended-release Tablets USP, 500 mg and 1000 mg, to be bioequivalent and, therefore, therapeutically equivalent to the reference listed drug (RLD), Niaspan Extended-release Tablets 500 mg and 1000 mg, respectively, of AbbVie Inc. (AbbVie).

Your dissolution testing should be incorporated into the stability and quality control program using the same method proposed in your ANDA. The "interim" dissolution specifications are as follows:

Dissolution Testing should be conducted in:

Medium:	Water
Volume:	900 mL
Temperature:	37°C ± 0.5°C

USP Apparatus: I (Basket)
Rotational Speed: 100 rpm

"Interim" Specifications:

Time (Hours)	Percent Dissolved
1	NMT (b) (4)
3	(b) (4)
6	
9	
12	
20	NLT (b) (4)

The "interim" dissolution test(s) and tolerances should be finalized by submitting dissolution data from the first three production size batches. These data should be submitted as a "Special Supplement - Changes Being Effected" if there are no revisions to be made to the "interim" specifications, or if the final specifications are tighter than the "interim" specifications. In all other instances, the information should be submitted in the form of a Prior Approval Supplement.

The RLD upon which you have based your ANDA, AbbVie's Niaspan Extended-release Tablets, 500 mg and 1000 mg, is subject to periods of patent protection. As noted in the agency's publication titled Approved Drug Products with Therapeutic Equivalence Evaluations (the "Orange Book"), U.S. Patent Nos. 6,080,428 (the '428 patent) and 6,469,035 (the '035 patent) are scheduled to expire on May 27, 2017, and March 15, 2018, respectively.

Your ANDA contains paragraph IV certifications under section 505(j)(2)(A)(vii)(IV) of the Act stating that each of these patents is invalid, unenforceable, or will not be infringed by your manufacture, use, or sale of Niacin Extended-release Tablets USP, 500 mg and 1000 mg, under this ANDA. You have notified the agency that Sun Pharma Global FZE (Sun) complied with the requirements of section 505(j)(2)(B) of the Act, that litigation was initiated against Sun for infringement of the both patents within the statutory 45-day period in the United States District Court for the District of Delaware [AbbVie Inc. and AbbVie Respiratory LLC v. Sun Pharmaceutical Industries LTD. and Sun Pharma Global FZE, Civil Action No. 10-112], and that the case was dismissed.

Under section 506A of the Act, certain changes in the conditions described in this ANDA require an approved supplemental application before the change may be made.

Please note that if FDA requires a Risk Evaluation & Mitigation Strategy (REMS) for a listed drug, an ANDA citing that listed drug also will be required to have a REMS. See section 505-1(i) of the Act.

Postmarketing reporting requirements for this ANDA are set forth in 21 CFR 314.80-81 and 314.98. You should advise the Office of Generic Drugs of any change in the marketing status of this drug.

Promotional materials may be submitted to FDA for comment prior to publication or dissemination. Please note that these submissions are voluntary. If you desire comments on proposed launch promotional materials with respect to compliance with applicable regulatory requirements, we recommend you submit, in draft or mock-up form, two copies of both the promotional materials and package insert directly to:

Food and Drug Administration
Center for Drug Evaluation and Research
Office of Prescription Drug Promotion
5901-B Ammendale Road
Beltsville, MD 20705

We call your attention to 21 CFR 314.81(b)(3) which requires that all promotional materials be submitted to the Office of Prescription Drug Promotion with a completed Form FDA 2253 at the time of their initial use.

The Generic Drug User Fee Amendments of 2012 (GDUFA)(Public Law 112-144, Title III) established certain provisions with respect to self-identification of facilities and payment of annual facility fees. Your ANDA identifies at least one facility that is subject to the self-identification requirement and payment of an annual facility fee. Self-identification must occur by June 1 of each year for the next fiscal year. Facility fees must be paid each year by the date specified in the Federal Register notice announcing facility fee amounts. All finished dosage forms (FDFs) or active pharmaceutical ingredients (APIs) manufactured in a facility that has not met its obligations to self-identify or to pay fees when they are due will be deemed misbranded. This means that it will be a violation of federal law to ship these products in interstate commerce or to import them into the United States. Such violations can result in

prosecution of those responsible, injunctions, or seizures of misbranded products. Products misbranded because of failure to self-identify or pay facility fees are subject to being denied entry into the United States.

As soon as possible, but no later than 14 days from the date of this letter, submit, using the FDA automated drug registration and listing system (eLIST), the content of labeling [21 CFR 314.50(l)] in structured product labeling (SPL) format, as described at http://www.fda.gov/ForIndustry/DataStandards/StructuredProductLabeling/default.htm, that is identical in content to the approved labeling (including the package insert, and any patient package insert and/or Medication Guide that may be required). Information on submitting SPL files using eLIST may be found in the guidance for industry titled "SPL Standard for Content of Labeling Technical Qs and As" at http://www.fda.gov/downloads/DrugsGuidanceComplianceRegulatoryInformation/Guidances/UCM072392.pdf. The SPL will be accessible via publicly available labeling repositories.

Sincerely yours,

{See appended electronic signature page}

Kathleen Uhl, M.D.
Acting Director
Office of Generic Drugs
Center for Drug Evaluation and Research

ANDA 200484

Caraco Pharmaceutical Laboratories Ltd.
U.S. Agent for Sun Pharma Global FZE
Attention: Kalpana R. Vanam
Vice President, Regulatory Affairs
Cranbury, NJ 08512

Dear Madam:

This is in reference to your abbreviated new drug application (ANDA) dated September 29, 2009, submitted pursuant to section 505(j) of the Federal Food, Drug, and Cosmetic Act (the Act), for Niacin Extended-Release Tablets USP, 500 mg and 1000 mg.

Reference is made to your amendments dated January 4, January 13, April 20, April 27, May 26, and September 6, 2010; January 11, February 17, September 6, September 20, September 27, September 30, October 8, October 21, October 22, November 21, and December 20, 2011; May 8 , May 26, and September 5, 2012; and January 12, March 6, April 3, and May 8, 2013.

We have completed the review of this ANDA, and based upon the information you have presented to date we have concluded that the drug is safe and effective for use as recommended in the submitted labeling. However, we are unable to grant final approval to your ANDA at this time because of the patent issue noted below. Therefore, the ANDA is **tentatively approved**. This determination is based upon information available to the agency at this time (i.e., information in your ANDA and the status of current good manufacturing practice (cGMP) at the facilities used in the manufacture and testing of the drug product). This determination is subject to change on the basis of new information that may come to our attention. This letter does not address issues related to the 180-day exclusivity provisions under section 505(j)(5)(B)(iv) of the Act.

The reference listed drug (RLD) upon which you have based your ANDA, Niaspan Extended-release Tablets of Abbvie Inc. is subject to periods of patent protection. The following patents and

their expiration dates are currently listed in the agency's publication titled Approved Drug Products with Therapeutic Equivalence Evaluations (the "Orange Book") for this drug product:

U.S. Patent Number	Expiration Date
6,129,930 (the '930 patent)	September 20, 2013
6,406,715 (the '715 patent)	September 20, 2013
6,676,967 (the '967 patent)	September 20, 2013
6,746,691 (the '691 patent)	September 20, 2013
6,818,229 (the '229 patent)	September 20, 2013
7,011,848 (the '848 patent)	September 20, 2013
7,998,506 (the '506 patent)	September 20, 2013
6,080,428 (the '428 patent)	May 27, 2017
6,469,035 (the '035 patent)	March 15, 2018

With respect to each of these patents, your ANDA contains paragraph IV certifications under section 505(j)(2)(A)(vii)(IV) of the Act stating that each patent is invalid, unenforceable, or will not be infringed by your manufacture, use, or sale of Niacin Extended-Release Tablets USP, 500 mg and 1000 mg, under this ANDA. You have notified the agency that Sun Pharma Global FZE (Sun) complied with the requirements of section 505(j)(2)(B) of the Act, and litigation for infringement of the '930, '715, '967, '691, '229, '848, '428 and '035 patents was brought against Sun within the statutory 45-day period in the United States District Court for the District of Delaware [Abbott Laboratories and Abbott Respiratory LLC v. Sun Pharma Global FZE, Civil Action No. 1:10-CV-00112].

Therefore, final approval cannot be granted until:

1. a. the expiration of the 30-month period (pertaining to the '930, '715, '967, '691, '229, and '848 patents) provided for in section 505(j)(5)(B)(iii),

   b. the date the court decides[1] that the '930, '715, '967, '691, '229, and '848 patents are invalid or not infringed (see sections 505(j)(5)(B)(iii)(I), (II), and (III) of the Act), or

   c. the '930, '715, '967, '691, '229, and '848 patents have expired, and

[1] This decision may be either a decision of the district court or the court of appeals, whichever court is the first to decide that the patent is invalid or not infringed.

2. The agency is assured there is no new information that would affect whether final approval should be granted.

Please note that if FDA requires a Risk Evaluation & Mitigation Strategy (REMS) for a listed drug, an ANDA citing that listed drug also will be required to have a REMS. See section 505-1(i) of the Act.

To reactivate your ANDA prior to final approval, please submit a "MINOR AMENDMENT – FINAL APPROVAL REQUESTED" 90 days prior to the date you believe that your ANDA will be eligible for final approval. This amendment should provide the legal/regulatory basis for your request for final approval and should include a copy of a court decision, or a settlement or licensing agreement, as appropriate. It should also identify changes, if any, in the conditions under which the ANDA was tentatively approved, i.e., updated information such as final-printed labeling, chemistry, manufacturing, and controls data as appropriate. This amendment should be submitted even if none of these changes were made, and it should be designated clearly in your cover letter as a MINOR AMENDMENT – FINAL APPROVAL REQUESTED.

In addition to the amendment requested above, the agency may request at any time prior to the date of final approval that you submit an additional amendment containing the requested information. Failure to submit either or, if requested, both amendments may result in rescission of the tentative approval status of your ANDA, or may result in a delay in the issuance of the final approval letter.

Any significant changes in the conditions outlined in this ANDA as well as changes in the status of the manufacturing and testing facilities' cGMP are subject to agency review before final approval of the ANDA will be made. Such changes should be categorized as representing either "major" or "minor" changes, and they will be reviewed according to OGD policy in effect at the time of receipt. The submission of multiple amendments prior to final approval may also result in a delay in the issuance of the final approval letter.

This drug product may not be marketed without final agency approval under section 505 of the Act. The introduction or delivery for introduction into interstate commerce of this drug product before the final approval date is prohibited under

section 301 of the Act. Also, until the agency issues the final approval letter, this drug product will not be deemed to be approved for marketing under section 505 of the Act, and will not be listed in the "Orange Book."

The Generic Drug User Fee Amendments of 2012 (GDUFA) (Public Law 112-144, Title III) established certain provisions with respect to self-identification of facilities and payment of annual facility fees. Your ANDA identifies at least one facility that is subject to the self-identification requirement and payment of an annual facility fee. Self-identification must occur by June 1 of each year for the next fiscal year. Facility fees must be paid each year by the date specified in the Federal Register notice announcing facility fee amounts. All finished dose form (FDFs) or active pharmaceutical ingredient (APIs) manufactured in a facility that has not met its obligations to self-identify or to pay fees when they are due will be deemed misbranded. This means that it will be a violation of federal law to ship these products in interstate commerce or to import them into the United States. Such violations can result in prosecution of those responsible, injunctions, or seizures of misbranded products. Products misbranded because of failure to self-identify or pay facility fees are subject to being denied entry into the United States.

In addition, we note that GDUFA requires that certain non-manufacturing sites and organizations listed in generic drug submissions comply with the self-identification requirement. The failure of any facility, site, or organization to comply with its obligation to self-identify and/or to pay fees when due may raise significant concerns about that site or organization and is a factor that may increase the likelihood of a site inspection prior to approval. FDA does not expect to give priority to completion of inspections that are required simply because facilities, sites, or organizations fail to comply with the law requiring self-identification or fee payment.

Additionally, we note that the failure of any facility referenced in the application to self-identify and pay applicable fees means that FDA will not consider the GDUFA application review goal dates to apply to that application.

For further information on the status of this ANDA, or prior to submitting additional amendments, please contact Dat Doan, Project Manager, at (240) 276-9336.

Sincerely yours,

Each film-coated tablet contains 1000 mg of niacin USP.

USUAL DOSAGE: See attached package insert for complete directions for use.

Do not accept if seal over bottle opening is broken or missing.

Store at 20° to 25°C (68° to 77°F); excursions permitted between 15° and 30°C (59° and 86°F) [see USP Controlled Room Temperature].

Dispense in tight container with child-resistant closure.

Niacin Extended-Release Tablets, USP 500 mg and 1000 mg

HIGHLIGHTS OF PRESCRIBING INFORMATION

These highlights do not include all the information needed to use NIACIN extended-release safely and effectively. See full prescribing information for NIACIN extended-release tablets.

NIACIN extended-release tablets, USP, film-coated, extended-release for oral use

Initial U.S. Approval: 1997

--RECENT MAJOR CHANGES--

Indications and Usage: Limitations of Use (1) 02/2013
Warnings and Precautions, Mortality and Coronary Heart Disease Morbidity (5.1) 02/2013

--INDICATIONS AND USAGE--

Niacin extended-release tablets, USP contain extended-release niacin (nicotinic acid), and are indicated:

- To reduce elevated TC, LDL-C, Apo B and TG, and to increase HDL-C in patients with primary hyperlipidemia and mixed dyslipidemia.(1)
- *In combination with simvastatin or lovastatin:* to treat primary hyperlipidemia and mixed dyslipidemia when treatment with niacin extended-release tablets, simvastatin, or lovastatin monotherapy is considered inadequate. (1)
- To reduce the risk of recurrent nonfatal myocardial infarction in patients with a history of myocardial infarction and hyperlipidemia.(1)
- *In combination with a bile acid binding resin:*
  - Slows progression or promotes regression of atherosclerotic disease in patients with a history of coronary artery disease (CAD) and hyperlipidemia. (1)
  - As an adjunct to diet to reduce elevated TC and LDL-C in adult patients with primary hyperlipidemia. (1)
- To reduce TG in adult patients with severe hypertriglyceridemia. (1)

Limitations of use:
No incremental benefit of niacin extended-release coadministered with simvastatin or lovastatin on cardiovascular morbidity and mortality over and above that demonstrated for niacin, simvastatin and lovastatin monotherapy, has been established.

Niacin extended-release, at doses of 1,500 to 2,000 mg/day, in combination with simvastatin, did not reduce the incidence of cardiovascular events more than simvastatin in a randomized controlled trial of patients with cardiovascular disease and mean baseline LDL-C levels of 74 mg per deciliter (5.1).

---------------------------------------DOSAGE AND ADMINISTRATION---------------------------------------

- Niacin extended-release tablets, USP should be taken at bedtime with a low-fat snack. (2)
- Dose range: 500 mg to 2000 mg once daily. (2)
- Therapy with niacin extended-release tablets, USP must be initiated at 500 mg at bedtime in order to reduce the incidence and severity of side effects which may occur during early therapy and should not be increased by more than 500 mg in any four week period. (2)
- Maintenance dose: 1000 mg to 2000 mg once daily. (2)
- Doses greater than 2000 mg daily are not recommended. (2)
- Concomitant therapy with lovastatin: Initial dose of lovastatin is 20 mg once a day; combination therapy with niacin extended-release tablets, USP and lovastatin should not exceed doses of 2000 mg and 40 mg daily, respectively. (2)
- Concomitant therapy with simvastatin: Initial dose of simvastatin is 20 mg once a day; combination therapy with niacin extended-release tablets, USP and simvastatin should not exceed doses of 2000 mg and 40 mg daily, respectively. (2)

--------------------------------------DOSAGE FORMS AND STRENGTHS--------------------------------------

Unscored film-coated tablets for oral administration: 500 mg and 1000 mg niacin extended-release. (3)

---CONTRAINDICATIONS---

- Active liver disease, which may include unexplained persistent elevations in hepatic transaminase levels. (4, 5.3)
- Active peptic ulcer disease. (4)
- Arterial bleeding. (4)
- Known hypersensitivity to product components. (4, 6.1)

-------------------------------------WARNINGS AND PRECAUTIONS-------------------------------------

- Severe hepatic toxicity has occurred in patients substituting sustained-release niacin for immediate-release niacin at equivalent doses. (5.3)
- Myopathy has been reported in patients taking niacin extended-release tablets. The risk for myopathy and rhabdomyolysis are increased when lovastatin or simvastatin are coadministered with niacin extended-release, particularly in elderly patients and patients with diabetes, renal failure, or uncontrolled hypothyroidism. (5.2)
- Liver enzyme abnormalities and monitoring: Persistent elevations in hepatic transaminase can occur. Monitor liver enzymes before and during treatment. (5.3)
- Use with caution in patients with unstable angina or in the acute phase of an MI. (5)
- Niacin extended-release can increase serum glucose levels. Glucose levels should be closely monitored in diabetic or potentially diabetic patients particularly during the first few months of use or dose adjustment. (5.4)

--ADVERSE REACTIONS--

Most common adverse reactions (incidence >5% and greater than placebo) are flushing, diarrhea, nausea, vomiting, increased cough, and pruritus. (6.1)

Flushing of the skin may be reduced in frequency or severity by pretreatment with aspirin (up to the recommended dose of 325 mg taken 30 minutes prior to niacin extended-release dose).(2)

To report SUSPECTED ADVERSE REACTIONS, contact CARACO Pharmaceutical Laboratories Ltd. at 1-800-818-4555 or FDA at 1-800-FDA-1088 or www.fda.gov/medwatch.

--DRUG INTERACTIONS--

- Statins: Caution should be used when prescribing niacin with statins as these agents can increase risk of myopathy/rhabdomyolysis. (5.2, 7.1)
- Bile Acid Sequestrants: Bile acid sequestrants have a high niacin-binding capacity and should be taken at least 4 to 6 hours before niacin extended-release administration. (7.2)

---------------------------------------USE IN SPECIFIC POPULATIONS---------------------------------------

- Renal impairment: Niacin extended-release tablets should be used with caution in patients with renal impairment. (5, 8.6)
- Hepatic impairment: Niacin extended-release tablets are contraindicated in active liver disease or significant or unexplained hepatic dysfunction or unexplained elevations of serum transaminases. (4, 5, 5.3, 8.7)

See 17 for PATIENT COUNSELING INFORMATION and FDA-approved patient labeling

Revised: 04/2014

FULL PRESCRIBING INFORMATION: CONTENTS*

* Sections or subsections omitted from the full prescribing information are not listed

FULL PRESCRIBING INFORMATION

1 INDICATIONS AND USAGE

Therapy with lipid-altering agents should be only one component of multiple risk factor intervention in individuals at significantly increased risk for atherosclerotic vascular disease due to hyperlipidemia. Niacin therapy is indicated as an adjunct to diet when the response to a diet restricted in saturated fat and cholesterol and other nonpharmacologic measures alone has been inadequate.

1. Niacin extended-release tablets, USP are indicated to reduce elevated TC, LDL-C, Apo B and TG levels, and to increase HDL-C in patients with primary hyperlipidemia and mixed dyslipidemia.
2. Niacin extended-release in combination with simvastatin or lovastatin is indicated for the treatment of primary hyperlipidemia and mixed dyslipidemia when treatment with niacin extended-release, simvastatin, or lovastatin monotherapy is considered inadequate.
3. In patients with a history of myocardial infarction and hyperlipidemia, niacin is indicated to reduce the risk of recurrent nonfatal myocardial infarction.
4. In patients with a history of coronary artery disease (CAD) and hyperlipidemia, niacin, in combination with a bile acid binding resin, is indicated to slow progression or promote regression of atherosclerotic disease.
5. Niacin extended-release in combination with a bile acid binding resin is indicated to reduce elevated TC and LDL-C levels in adult patients with primary hyperlipidemia.
6. Niacin is also indicated as adjunctive therapy for treatment of adult patients with severe hypertriglyceridemia who present a risk of pancreatitis and who do not respond adequately to a determined dietary effort to control them.

Limitations of Use
No incremental benefit of niacin extended-release coadministered with simvastatin or lovastatin on cardiovascular morbidity and mortality over and above that demonstrated for niacin, simvastatin, or lovastatin monotherapy has been established.

Niacin extended-release, at doses of 1,500 to 2,000 mg/day, in combination with simvastatin, did not reduce the incidence of cardiovascular events more than simvastatin in a randomized controlled trial of patients with cardiovascular disease and mean baseline LDL-C levels of 74 mg per deciliter *[see Warnings and Precautions (5.1)]*.

2 DOSAGE AND ADMINISTRATION

Niacin extended-release tablets, USP should be taken at bedtime, after a low-fat snack, and doses should be individualized according to patient response. Therapy with niacin extended-release tablets, USP must be initiated at 500 mg at bedtime in order to reduce the incidence and severity of side effects which may occur during early therapy. The recommended dose escalation is shown in Table 1 below.

Table 1. Recommended Dosing

	Week(s)	Daily dose	Niacin Extended-Release Dosage
INITIAL TITRATION SCHEDULE	1 to 4	500 mg	1 niacin extended-release 500 mg tablet at bedtime
	5 to 8	1000 mg	1 niacin extended-release 1000 mg tablet or 2 niacin extended-release 500 mg tablets at bedtime
	*	1500 mg	2 niacin extended-release 750 mg tablets or 3 niacin extended-release 500 mg tablets at bedtime
	*	2000 mg	2 niacin extended-release 1000 mg tablets or 4 niacin extended-release 500 mg tablets at bedtime

* After Week 8, titrate to patient response and tolerance. If response to 1000 mg daily is inadequate, increase dose to 1500 mg daily; may subsequently increase dose to 2000 mg daily. Daily dose should not be increased more than 500 mg in a 4-week period, and doses above 2000 mg daily are not recommended. Women may respond at lower doses than men.

Maintenance Dose
The daily dosage of niacin extended-release tablets, USP should not be increased by more than 500 mg in any 4-week period. The recommended maintenance dose is 1000 mg (two 500 mg tablets or one 1000 mg tablet) to 2000 mg (two 1000 mg tablets or four 500 mg tablets) once daily at bedtime. Doses greater than 2000 mg daily are not recommended. Women may respond at lower niacin extended-release tablets, USP doses than men *[see Clinical Studies (14.2)]*.

Single-dose bioavailability studies have demonstrated that two of the 500 mg and one of the 1000 mg tablet strengths are interchangeable but three of the 500 mg and two of the 750 mg tablet strengths are not interchangeable.

If lipid response to niacin extended-release tablets, USP alone is insufficient or if higher doses of niacin extended-release tablets, USP are not well tolerated, some patients may benefit from combination therapy with a bile acid binding resin or statin *[see Drug Interactions (7.3), Concomitant Therapy below and Clinical Studies (14.3, 14.4)]*.

Flushing of the skin *[see Adverse Reactions (6.1)]* may be reduced in frequency or severity by pretreatment with aspirin (up to the recommended dose of 325 mg taken 30 minutes prior to niacin extended-release tablets, USP dose). Tolerance to this flushing develops rapidly over the course of several weeks. Flushing, pruritus, and gastrointestinal distress are also greatly reduced by slowly increasing the dose of niacin and avoiding administration on an empty stomach. Concomitant alcoholic, hot drinks or spicy foods may increase the side effects of flushing and pruritus and should be avoided around the time of niacin extended-release tablets, USP ingestion.

Equivalent doses of niacin extended-release tablets, USP should not be substituted for sustained-release (modified-release, timed-release) niacin preparations or immediate-release (crystalline) niacin *[see Warnings and Precautions (5)]*. Patients previously receiving other niacin products should be started with the recommended niacin extended-release tablets, USP titration schedule (see Table 1), and the dose should subsequently be individualized based on patient response.

If niacin extended-release tablets, USP therapy is discontinued for an extended period, reinstitution of therapy should include a titration phase (see Table 1).

Niacin extended-release tablets, USP should be taken whole and should not be broken, crushed or chewed before swallowing.

Concomitant Therapy
Concomitant Therapy with Lovastatin or Simvastatin
Patients already receiving a stable dose of lovastatin or simvastatin who require further TG-lowering or HDL-raising (e.g., to achieve NCEP non-HDL-C goals), may receive concomitant dosage titration with niacin extended-release tablets, USP per niacin extended-release tablets, USP recommended initial titration schedule *[see Dosage and Administration (2)]*. For patients already receiving a stable dose of niacin extended-release tablets, USP who require further LDL-lowering (e.g., to achieve NCEP LDL-C goals), the usual recommended starting dose of lovastatin and simvastatin is 20 mg once a day. Dose adjustments should be made at intervals of 4 weeks or more. Combination therapy with niacin extended-release tablets, USP and lovastatin or niacin extended-release tablets, USP and simvastatin should not exceed doses of 2000 mg niacin extended-release tablets, USP and 40 mg lovastatin or simvastatin daily.

Dosage in Patients with Renal or Hepatic Impairment
Use of niacin extended-release tablets, USP in patients with renal or hepatic impairment has not been studied. Niacin extended-release tablets, USP are contraindicated in patients with significant or unexplained hepatic dysfunction. Niacin extended-release tablets, USP should be used with caution in patients with renal impairment *[see Warnings and Precautions (5)]*.

3 DOSAGE FORMS AND STRENGTHS

- 500 mg unscored, pink, film-coated, capsule-shaped tablets
- 1000 mg unscored, pink, film-coated, capsule-shaped tablets

4 CONTRAINDICATIONS

Niacin extended-release tablets are contraindicated in the following conditions:

- Active liver disease or unexplained persistent elevations in hepatic *transaminases [see Warnings and Precautions (5.3)]*
- Patients with active peptic ulcer disease
- Patients with arterial bleeding
- Hypersensitivity to niacin or any component of this medication *[see Adverse Reactions (6.1)]*

5 WARNINGS AND PRECAUTIONS

Niacin extended-release tablets preparations should not be substituted for equivalent doses of immediate-release (crystalline) niacin. For patients switching from immediate-release niacin to niacin extended-release tablets, therapy with niacin extended-release tablets should be initiated with low doses (i.e., 500 mg at bedtime) and the niacin extended-release tablets dose should then be titrated to the desired therapeutic response *[see Dosage and Administration (2)]*.

Caution should also be used when niacin extended-release is used in patients with unstable angina or in the acute phase of an MI, particularly when such patients are also receiving vasoactive drugs such as nitrates, calcium channel blockers, or adrenergic blocking agents.

Niacin is rapidly metabolized by the liver, and excreted through the kidneys. Niacin extended-release is contraindicated in patients with significant or unexplained hepatic impairment *[see Contraindications (4) and Warnings and Precautions (5.3)]* and should be used with caution in patients with renal impairment. Patients with a past history of jaundice, hepatobiliary disease, or peptic ulcer should be observed closely during niacin extended-release therapy.

5.1 Mortality and Coronary Heart Disease Morbidity

The Atherothrombosis Intervention in Metabolic Syndrome with Low HDL/High Triglycerides: Impact on Global Health Outcomes (AIM-HIGH) trial was a randomized placebo-controlled trial of 3414 patients with stable, previously diagnosed cardiovascular disease. Mean baseline lipid levels were LDL-C 74 mg/dL, HDL-C 35 mg/dL, non-HDL-C 111 mg/dL and median triglyceride level of 163 to 177 mg/dL. Ninety-four percent of patients were on background statin therapy prior to entering the trial. All participants received simvastatin, 40 to 80 mg per day, plus ezetimibe 10 mg per day if needed, to maintain an LDL-C level of 40 to 80 mg/dL, and were randomized to receive niacin extended-release 1,500 to 2,000 mg/day (n=1718) or matching placebo (IR Niacin, 100 to 150 mg, n=1696). On-treatment lipid changes at two years for LDL-C were -12% for the simvastatin plus niacin extended-release group and -5.5% for the simvastatin plus placebo group. HDL-C increased by 25% to 42 mg/dL in the simvastatin plus niacin extended-release group and by 9.8% to 38 mg/dL in the simvastatin plus placebo group (P<0.001). Triglyceride levels decreased by 28.6% in the simvastatin plus niacin extended-release group and by 8.1% in the simvastatin plus placebo group. The primary outcome was an ITT composite of the first study occurrence of coronary heart disease death, nonfatal myocardial infarction, ischemic stroke, hospitalization for acute coronary syndrome or symptom-driven coronary or cerebral revascularization procedures. The trial was stopped after a mean follow-up period of 3 years owing to a lack of efficacy. The primary outcome occurred in 282 patients in the simvastatin plus niacin extended-release group (16.4%) and in 274 patients in the simvastatin plus placebo group (16.2%) (HR 1.02 [95% CI, 0.87 to 1.21], P=0.79. In an ITT analysis, there were 42 cases of first occurrence of ischemic stroke reported, 27 (1.6%) in the simvastatin plus niacin extended-release group and 15 (0.9%) in the simvastatin plus placebo group, a non-statistically significant result (HR 1.79, [95%CI = 0.95 to 3.36], p=0.071). The on-treatment ischemic stroke events were 19 for the simvastatin plus niacin extended-release group and 15 for the simvastatin plus placebo group *[see Adverse Reactions (6.1)]*.

5.2 Skeletal Muscle

Cases of rhabdomyolysis have been associated with concomitant administration of lipid-altering doses (≥1 g/day) of niacin and statins. Physicians contemplating combined therapy with statins and niacin extended-release should carefully weigh the potential benefits and risks and should carefully monitor patients for any signs and symptoms of muscle pain, tenderness, or weakness, particularly during the initial months of therapy and during any periods of upward dosage titration of either drug. Periodic serum creatine phosphokinase (CPK) and potassium determinations should be considered in such situations, but there is no assurance that such monitoring will prevent the occurrence of severe myopathy.

The risk for myopathy and rhabdomyolysis are increased when lovastatin or simvastatin are coadministered with niacin extended-release, particularly in elderly patients and patients with diabetes, renal failure, or uncontrolled hypothyroidism.

5.3 Liver Dysfunction

Cases of severe hepatic toxicity, including fulminant hepatic necrosis, have occurred in patients who have substituted sustained-release (modified-release, timed-release) niacin products for immediate-release (crystalline) niacin at equivalent doses.

Niacin extended-release should be used with caution in patients who consume substantial quantities of alcohol and/or have a past history of liver disease. Active liver diseases or unexplained transaminase elevations are contraindications to the use of niacin extended-release.

Niacin preparations have been associated with abnormal liver tests. In three placebo-controlled clinical trials involving titration to final daily niacin extended-release doses ranging from 500 mg to 3000 mg, 245 patients received niacin extended-release for a mean duration of 17 weeks. No patient with normal serum transaminase levels (AST, ALT) at baseline experienced elevations to more than 3 times the upper limit of normal (ULN) during treatment with niacin extended-release. In these studies, fewer than 1% (2/245) of niacin extended-release patients discontinued due to transaminase elevations greater than 2 times the ULN.

In three safety and efficacy studies with a combination tablet of niacin extended-release and lovastatin involving titration to final daily doses (expressed as mg of niacin/mg of lovastatin) 500 mg/10 mg to 2500 mg/40 mg, ten of 1028 patients (1%) experienced reversible elevations in AST/ALT to more than 3 times the ULN. Three of ten elevations occurred at doses outside the recommended dosing limit of 2000 mg/40 mg; no patient receiving 1000 mg/20 mg had 3-fold elevations in AST/ALT.

Niacin extended-release and simvastatin can cause abnormal liver tests. In a simvastatin-controlled, 24 week study with a fixed dose combination of niacin extended-release and simvastatin in 641 patients, there were no persistent increases (more than 3x the ULN) in serum transaminases. In three placebo-controlled clinical studies of extended-release niacin there were no patients with normal serum transaminase levels at baseline who experienced elevations to more than 3x the ULN. Persistent increases (more than 3x the ULN) in serum transaminases have occurred in approximately 1% of patients who received simvastatin in clinical studies. When drug treatment was interrupted or discontinued in these patients, the transaminases levels usually fell slowly to pretreatment levels. The increases were not associated with jaundice or other clinical signs or symptoms. There was no evidence of hypersensitivity.

In the placebo-controlled clinical trials and the long-term extension study, elevations in transaminases did not appear to be related to treatment duration; elevations in AST levels did appear to be dose related. Transaminase elevations were reversible upon discontinuation of niacin extended-release.

Liver function tests should be performed on all patients during therapy with niacin extended-release. Serum transaminase levels, including AST and ALT (SGOT and SGPT), should be monitored before treatment begins, every 6 to 12 weeks for the first year, and periodically thereafter (e.g., at approximately 6-month intervals). Special attention should be paid to patients who develop elevated serum transaminase levels, and in these patients, measurements should be repeated promptly and then performed more frequently. If the transaminase levels show evidence of progression, particularly if they rise to 3 times ULN and are persistent, or if they are associated with symptoms of nausea, fever, and/or malaise, the drug should be discontinued.

5.4 Laboratory Abnormalities

Increase in Blood Glucose:
Niacin treatment can increase fasting blood glucose. Frequent monitoring of blood glucose should be performed to ascertain that the drug is producing no adverse effects. Diabetic patients may experience a dose-related increase in glucose intolerance. Diabetic or potentially diabetic patients should be observed closely during treatment with niacin extended-release, particularly during the first few months of use or dose adjustment; adjustment of diet and/or hypoglycemic therapy may be necessary.

Reduction in platelet count:
Niacin extended-release has been associated with small but statistically significant dose-related reductions in platelet count (mean of -11% with 2000 mg). Caution should be observed when niacin extended-release is administered concomitantly with anticoagulants; platelet counts should be monitored closely in such patients.

Increase in Prothrombin Time (PT):
Niacin extended-release has been associated with small but statistically significant increases in prothrombin time (mean of approximately +4%); accordingly, patients undergoing surgery should be carefully evaluated. Caution should be observed when niacin extended-release is administered concomitantly with anticoagulants; prothrombin time should be monitored closely in such patients.

Increase in Uric Acid:
Elevated uric acid levels have occurred with niacin therapy, therefore use with caution in patients predisposed to gout.

Decrease in Phosphorus:
In placebo-controlled trials, niacin extended-release has been associated with small but statistically significant, dose-related reductions in phosphorus levels (mean of -13% with 2000 mg). Although these reductions were transient, phosphorus levels should be monitored periodically in patients at risk for hypophosphatemia.

6 ADVERSE REACTIONS

Because clinical studies are conducted under widely varying conditions, adverse reaction rates observed in the clinical studies of a drug cannot be directly compared to rates in the clinical studies of another drug and may not reflect the rates observed in practice.

6.1 Clinical Studies Experience

In the placebo-controlled clinical trials database of 402 patients (age range 21 to 75 years, 33% women, 89% Caucasians, 7% Blacks, 3% Hispanics, 1% Asians) with a median treatment duration of 16 weeks, 16% of patients on niacin extended-release and 4% of patients on placebo discontinued due to adverse reactions. The most common adverse reactions in the group of patients treated with niacin extended-release that led to treatment discontinuation and occurred at a rate greater than placebo were flushing (6% vs. 0%), rash (2% vs. 0%), diarrhea (2% vs. 0%), nausea (1% vs. 0%), and vomiting (1% vs. 0%). The most commonly reported adverse reactions (incidence >5% and greater than placebo) in the niacin extended-release controlled clinical trial database of 402 patients were flushing, diarrhea, nausea, vomiting, increased cough and pruritus.

In the placebo-controlled clinical trials, flushing episodes (i.e., warmth, redness, itching and/or tingling) were the most common treatment-emergent adverse reactions (reported by as many as 88% of patients) for niacin extended-release. Spontaneous reports suggest that flushing may also be accompanied by symptoms of dizziness, tachycardia, palpitations, shortness of breath, sweating, burning sensation/skin burning sensation, chills, and/or edema, which in rare cases may lead to syncope. In pivotal studies, 6% (14/245) of niacin extended-release patients discontinued due to flushing. In comparisons of immediate-release (IR) niacin and niacin extended-release tablets, although the proportion of patients who flushed was similar, fewer flushing episodes were reported by patients who received niacin extended-release tablets. Following 4 weeks of maintenance therapy at daily doses of 1500 mg, the incidence of flushing over the 4-week period averaged 8.6 events per patient for IR niacin versus 1.9 following niacin extended-release tablets.

Other adverse reactions occurring in ≥5% of patients treated with niacin extended-release tablets and at an incidence greater than placebo are shown in Table 2 below.

Table 2. Treatment-Emergent Adverse Reactions by Dose Level in ≥ 5% of Patients and at an Incidence Greater than Placebo; Regardless of Causality Assessment in Placebo-Controlled Clinical Trials

	Placebo-Controlled Studies Niacin Extended-Release Tablets Treatment@		Recommended Daily Maintenance Doses†		
	Placebo (n = 157) %	500 mg‡ (n = 87) %	1000 mg (n = 110) %	1500 mg (n = 136) %	2000 mg (n = 95) %
Gastrointestinal Disorders					
Diarrhea	13	7	10	10	14
Nausea	7	5	6	4	11
Vomiting	4	0	2	4	9
Respiratory					
Cough, Increased	6	3	2	< 2	8
Skin and Subcutaneous Tissue Disorders					
Pruritus	2	8	0	3	0
Rash	0	5	5	5	0
Vascular Disorders					
Flushing&	19	68	69	63	55

Note: Percentages are calculated from the total number of patients in each column.
† Adverse reactions are reported at the initial dose where they occur.
@ Pooled results from placebo-controlled studies; for niacin extended-release tablets, n = 245 and median treatment duration = 16 weeks. Number of niacin extended-release tablets patients (n) are not additive across doses.
‡ The 500 mg/day dose is outside the recommended daily maintenance dosing range *[see Dosage and Administration (2)]*.
& 10 patients discontinued before receiving 500 mg, therefore they were not included.

In general, the incidence of adverse events was higher in women compared to men.

Atherothrombosis Intervention in Metabolic Syndrome with Low HDL/High Triglycerides: Impact on Global Health Outcomes (AIM-HIGH)
In AIM-HIGH involving 3,414 patients (mean age of 64 years, 15% women, 92% Caucasians, 34% with diabetes mellitus) with stable, previously diagnosed cardiovascular disease, all patients received simvastatin, 40 to 80 mg per day, plus ezetimibe 10 mg per day if needed, to maintain an LDL-C level of 40 to 80 mg/dL, and were randomized to receive niacin extended-release 1,500 to 2,000 mg/day (n=1718) or matching placebo (IR Niacin, 100 mg to 150 mg, n=1696). The incidence of the adverse reactions of "blood glucose increased" (6.4% vs. 4.5%) and "diabetes mellitus" (3.6% vs. 2.2%) was significantly higher in the simvastatin plus niacin extended-release group as compared to the simvastatin plus placebo group. There were 5 cases of rhabdomyolysis reported, 4 (0.2%) in the simvastatin plus niacin extended-release group and one (<0.1%) in the simvastatin plus placebo group *[see Warnings and Precautions (5.1)]*.

6.2 Postmarketing Experience

Because the below reactions are reported voluntarily from a population of uncertain size, it is generally not possible to reliably estimate their frequency or establish a causal relationship to drug exposure.

The following additional adverse reactions have been identified during post-approval use of niacin extended-release tablets:

Hypersensitivity reactions, including anaphylaxis, angioedema, urticaria, flushing, dyspnea, tongue edema, larynx edema, face edema, peripheral edema, laryngismus, and vesiculobullous rash; maculopapular rash; dry skin; tachycardia; palpitations; atrial fibrillation; other cardiac arrhythmias; syncope; hypotension; postural hypotension; blurred vision; macular edema; peptic ulcers; eructation; flatulence; hepatitis; jaundice; decreased glucose tolerance; gout; myalgia; myopathy; dizziness; insomnia; asthenia; nervousness; paresthesia; dyspnea; sweating; burning sensation/skin burning sensation; skin discoloration, and migraine.

Clinical Laboratory Abnormalities
Chemistry: Elevations in serum transaminases *[see Warnings and Precautions (5.3)]*, LDH, fasting glucose, uric acid, total bilirubin, amylase and creatine kinase, and reduction in phosphorus.

Hematology: Slight reductions in platelet counts and prolongation in prothrombin time *[see Warnings and Precautions (5.4)]*.

7 DRUG INTERACTIONS

7.1 Statins

Caution should be used when prescribing niacin (≥1 gm/day) with statins as these drugs can increase risk of myopathy/rhabdomyolysis. Combination therapy with niacin extended-release and lovastatin or niacin extended-release and simvastatin should not exceed doses of 2000 mg niacin extended-release and 40 mg lovastatin or simvastatin daily. *[see Warnings and Precautions (5) and Clinical Pharmacology (12.3)]*.

7.2 Bile Acid Sequestrants

An *in vitro* study results suggest that the bile acid-binding resins have high niacin binding capacity. Therefore, 4 to 6 hours, or as great an interval as possible, should elapse between the ingestion of bile acid-binding resins and the administration of niacin extended-release *[see Clinical Pharmacology (12.3)]*.

7.3 Aspirin

Concomitant aspirin may decrease the metabolic clearance of nicotinic acid. The clinical relevance of this finding is unclear.

7.4 Antihypertensive Therapy

Niacin may potentiate the effects of ganglionic blocking agents and vasoactive drugs resulting in postural hypotension.

7.5 Other

Vitamins or other nutritional supplements containing large doses of niacin or related compounds such as nicotinamide may potentiate the adverse effects of niacin extended-release.

7.6 Laboratory Test Interactions

Niacin may produce false elevations in some fluorometric determinations of plasma or urinary catecholamines. Niacin may also give false-positive reactions with cupric sulfate solution (Benedict's reagent) in urine glucose tests.

8 USE IN SPECIFIC POPULATIONS

8.1 Pregnancy

Pregnancy Category C.
Animal reproduction studies have not been conducted with niacin or with niacin extended-release tablets. It is also not known whether niacin at doses typically used for lipid disorders can cause fetal harm when administered to pregnant women or whether it can affect reproductive capacity. If a woman receiving niacin for primary hyperlipidemia becomes pregnant, the drug should be discontinued. If a woman being treated with niacin for hypertriglyceridemia conceives, the benefits and risks of continued therapy should be assessed on an individual basis.

All statins are contraindicated in pregnant and nursing women. When niacin extended-release is administered with a statin in a woman of childbearing potential, refer to the pregnancy category and product labeling for the statin.

8.3 Nursing Mothers

Niacin is excreted into human milk but the actual infant dose or infant dose as a percent of the maternal dose is not known. Because of the potential for serious adverse reactions in nursing infants from lipid-altering doses of nicotinic acid, a decision should be made whether to discontinue nursing or to discontinue the drug, taking into account the importance of the drug to the mother. No studies have been conducted with niacin extended-release tablets in nursing mothers.

8.4 Pediatric Use

Safety and effectiveness of niacin therapy in pediatric patients (≤16 years) have not been established.

8.5 Geriatric Use

Of 979 patients in clinical studies of niacin extended-release, 21% of the patients were age 65 and over. No overall differences in safety and effectiveness were observed between these patients and younger patients, and other reported clinical experience has not identified differences in responses between the elderly and younger patients, but greater sensitivity of some older individuals cannot be ruled out.

8.6 Renal Impairment

No studies have been performed in this population. Niacin extended-release should be used with caution in patients with renal impairment *[see Warnings and Precautions (5)]*.

8.7 Hepatic Impairment

No studies have been performed in this population. Niacin extended-release should be used with caution in patients with a past history of liver disease and/or who consume substantial quantities of alcohol. Active liver disease, unexplained transaminase elevations and significant or unexplained hepatic dysfunction are contraindications to the use of niacin extended-release *[see Contraindications (4) and Warnings and Precautions (5.3)]*.

8.8 Gender

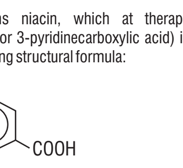
Data from the clinical trials suggest that women have a greater hypolipidemic response than men at equivalent doses of niacin extended-release.

10 OVERDOSAGE

Supportive measures should be undertaken in the event of an overdose.

11 DESCRIPTION

Niacin extended-release tablet, USP contains niacin, which at therapeutic doses is an antihyperlipidemic agent. Niacin (nicotinic acid, or 3-pyridinecarboxylic acid) is a white, crystalline powder, sparingly soluble in water, with the following structural formula:



$C_6H_5NO_2$ M.W. = 123.11

Niacin extended-release tablets, USP are unscored, pink, film-coated tablets for oral administration and are available in two tablet strengths containing 500 mg, and 1000 mg niacin USP. Niacin extended-release tablets, USP also contain the inactive ingredients hypromellose, hydrogenated vegetable oil Type I, glyceryl behenate, colloidal silicon dioxide, magnesium stearate, polyvinyl alcohol-partially hydrolyzed, titanium dioxide, polyethylene glycol, talc, iron oxide red and iron oxide yellow.

USP Dissolution Test Pending

12 CLINICAL PHARMACOLOGY

12.1 Mechanism of Action

The mechanism by which niacin alters lipid profiles has not been well defined. It may involve several actions including partial inhibition of release of free fatty acids from adipose tissue, and increased lipoprotein lipase activity, which may increase the rate of chylomicron triglyceride removal from plasma. Niacin decreases the rate of hepatic synthesis of VLDL and LDL, and does not appear to affect fecal excretion of fats, sterols, or bile acids.

12.2 Pharmacodynamics

Niacin functions in the body after conversion to nicotinamide adenine dinucleotide (NAD) in the NAD coenzyme system. Niacin (but not nicotinamide) in gram doses reduces total cholesterol (TC), low density lipoprotein cholesterol (LDL-C), and triglycerides (TG), and increases high-density lipoprotein cholesterol (HDL-C). The magnitude of individual lipid and lipoprotein responses may be influenced by the severity and type of underlying lipid abnormality. The increase in HDL-C is associated with an increase in apolipoprotein A-I (Apo A-I) and a shift in the distribution of HDL subfractions. These shifts include an increase in the HDL_2:HDL_3 ratio, and an elevation in lipoprotein A-I (Lp A-I, an HDL-C particle containing only Apo A-I). Niacin treatment also decreases serum levels of apolipoprotein B-100 (Apo B), the major protein component of the very low-density lipoprotein (VLDL) and LDL fractions, and of Lp(a), a variant form of LDL independently associated with coronary risk. In addition, preliminary reports suggest that niacin causes favorable LDL particle size transformations, although the clinical relevance of this effect requires further investigation. The effect of niacin-induced changes in lipids/proteins on cardiovascular morbidity or mortality in individuals without preexisting coronary disease has not been established.

A variety of clinical studies have demonstrated that elevated levels of TC, LDL-C, and Apo B promote human atherosclerosis. Similarly, decreased levels of HDL-C are associated with the development of atherosclerosis. Epidemiological investigations have established that cardiovascular morbidity and mortality vary directly with the level of Total-C and LDL-C, and inversely with the level of HDL-C.

Like LDL, cholesterol-enriched triglyceride-rich lipoproteins, including VLDL, intermediate-density lipoprotein (IDL), and their remnants, can also promote atherosclerosis. Elevated plasma TG are frequently found in a triad with low HDL-C levels and small LDL particles, as well as in association with non-lipid metabolic risk factors for coronary heart disease (CHD). As such, total plasma TG has not consistently been shown to be an independent risk factor for CHD. Furthermore, the independent effect of raising HDL-C or lowering TG on the risk of coronary and cardiovascular morbidity and mortality has not been determined.

12.3 Pharmacokinetics

Absorption
Due to extensive and saturable first-pass metabolism, niacin concentrations in the general circulation are dose dependent and highly variable. Time to reach the maximum niacin plasma concentrations was about 5 hours following niacin extended-release tablets. To reduce the risk of gastrointestinal (GI) upset, administration of niacin extended-release tablets with a low-fat meal or snack is recommended.

Single-dose bioavailability studies have demonstrated that the 500 mg and 1000 mg tablet strengths are dosage form equivalent but the 500 mg and 750 mg tablet strengths are not dosage form equivalent.

Metabolism
The pharmacokinetic profile of niacin is complicated due to extensive first-pass metabolism that is dose-rate specific and, at the doses used to treat dyslipidemia, saturable. In humans, one pathway is through a simple conjugation step with glycine to form nicotinuric acid (NUA). NUA is then excreted in the urine, although there may be a small amount of reversible metabolism back to niacin. The other pathway results in the formation of nicotinamide adenine dinucleotide (NAD). It is unclear whether nicotinamide is formed as a precursor to, or following the synthesis of, NAD. Nicotinamide is further metabolized to at least N-methylnicotinamide (MNA) and nicotinamide-N-oxide (NNO). MNA is further metabolized to two other compounds, N-methyl-2-pyridone-5-carboxamide (2PY) and N-methyl-4-pyridone-5-carboxamide (4PY). The formation of 2PY appears to predominate over 4PY in humans. At the doses used to treat hyperlipidemia, these metabolic pathways are saturable, which explains the nonlinear relationship between niacin dose and plasma concentrations following multiple-dose niacin extended-release tablets administration.

Nicotinamide does not have hypolipidemic activity; the activity of the other metabolites is unknown.

Elimination
Following single and multiple doses, approximately 60 to 76% of the niacin dose administered as niacin extended-release tablets was recovered in urine as niacin and metabolites; up to 12% was recovered as unchanged niacin after multiple dosing. The ratio of metabolites recovered in the urine was dependent on the dose administered.

Pediatric Use
No pharmacokinetic studies have been performed in this population (≤16 years) *[see Use in Specific Populations (8.4)]*.

Geriatric Use
No pharmacokinetic studies have been performed in this population (> 65 years) [see Use in Specific Populations (8.5)].

Renal Impairment
No pharmacokinetic studies have been performed in this population. Niacin extended-release tablets should be used with caution in patients with renal disease *[see Warnings and Precautions (5)]*.

Hepatic Impairment
No pharmacokinetic studies have been performed in this population. Active liver disease, unexplained transaminase elevations and significant or unexplained hepatic dysfunction are contraindications to the use of niacin extended-release tablets *[see Contraindications (4) and Warnings and Precautions (5.3)]*.

Gender
Steady-state plasma concentrations of niacin and metabolites after administration of niacin extended-release tablets are generally higher in women than in men, with the magnitude of the difference varying with dose and metabolite. This gender differences observed in plasma levels of niacin and its metabolites may be due to gender-specific differences in metabolic rate or volume of distribution. Recovery of niacin and metabolites in urine, however, is generally similar for men and women, indicating that absorption is similar for both genders *[see Gender (8.8)]*.

Drug interactions
Fluvastatin
Niacin did not affect fluvastatin pharmacokinetics *[see Drug Interactions (7.1)]*.

Lovastatin
When niacin extended-release 2000 mg and lovastatin 40 mg were co-administered, niacin extended-release increased lovastatin Cmax and AUC by 2% and 14%, respectively, and decreased lovastatin acid Cmax and AUC by 22% and 2%, respectively. Lovastatin reduced niacin extended-release bioavailability by 2 to 3% *[see Drug Interactions (7.1)]*.

Simvastatin
When niacin extended-release 2000 mg and simvastatin 40 mg were co-administered, niacin extended-release increased simvastatin Cmax and AUC by 1% and 9%, respectively, and simvastatin acid Cmax and AUC by 2% and 18%, respectively. Simvastatin reduced niacin extended-release bioavailability by 2% *[see Drug Interactions (7.1)]*.

Bile Acid Sequestrants
An *in vitro* study was carried out investigating the niacin-binding capacity of colestipol and cholestyramine. About 98% of available niacin was bound to colestipol, with 10 to 30% binding to cholestyramine *[see Drug Interactions (7.2)]*.

13 NONCLINICAL TOXICOLOGY

13.1 Carcinogenesis and Mutagenesis and Impairment of Fertility

Niacin administered to mice for a lifetime as a 1% solution in drinking water was not carcinogenic. The mice in this study received approximately 6 to 8 times a human dose of 3,000 mg/day as determined on a mg/m^2 basis. Niacin was negative for mutagenicity in the Ames test. No studies on impairment of fertility have been performed. No studies have been conducted with niacin extended-release regarding carcinogenesis, mutagenesis, or impairment of fertility.

14 CLINICAL STUDIES

14.1 Niacin Clinical Studies

The role of LDL-C in atherogenesis is supported by pathological observations, clinical studies, and many animal experiments. Observational epidemiological studies have clearly established that high TC or LDL-C and low HDL-C are risk factors for CHD. Additionally, elevated levels of Lp(a) have been shown to be independently associated with CHD risk.

Niacin's ability to reduce mortality and the risk of definite, nonfatal myocardial infarction (MI) has been assessed in long-term studies. The Coronary Drug Project, completed in 1975, was designed to assess the safety and efficacy of niacin and other lipid-altering drugs in men 30 to 64 years old with a history of MI. Over an observation period of 5 years, niacin treatment was associated with a statistically significant reduction in nonfatal, recurrent MI. The incidence of definite, nonfatal MI was 8.9% for the 1,119 patients randomized to nicotinic acid versus 12.2% for the 2,789 patients who received placebo (*p*<0.004). Total mortality was similar in the two groups at 5 years (24.4% with nicotinic acid versus 25.4% with placebo; *p*=N.S.). At the time of a 15-year follow-up, there were 11% (69) fewer deaths in the niacin group compared to the placebo cohort (52% versus 58.2%; *p*=0.0004). However, mortality at 15 years was not an original endpoint of the Coronary Drug Project. In addition, patients had not received niacin for approximately 9 years, and confounding variables such as concomitant medication use and medical or surgical treatments were not controlled.

The Cholesterol-Lowering Atherosclerosis Study (CLAS) was a randomized, placebo-controlled, angiographic trial testing combined colestipol and niacin therapy in 162 non-smoking males with previous coronary bypass surgery. The primary, per-subject cardiac endpoint was global coronary artery change score. After 2 years, 61% of patients in the placebo cohort showed disease progression by global change score (n=82), compared with only 38.8% of drug-treated subjects (n=80), when both native arteries and grafts were considered (*p*<0.005); disease regression also occurred more frequently in the drug-treated group (16.2% versus 2.4%; *p*=0.002). In a follow-up to this trial in a subgroup of 103 patients treated for 4 years, again, significantly fewer patients in the drug-treated group demonstrated progression than in the placebo cohort (48% versus 85%, respectively; *p*<0.0001).

The Familial Atherosclerosis Treatment Study (FATS) in 146 men ages 62 and younger with Apo B levels ≥125 mg/dL, established coronary artery disease, and family histories of vascular disease, assessed change in severity of disease in the proximal coronary arteries by quantitative arteriography. Patients were given dietary counseling and randomized to treatment with either conventional therapy with double placebo (or placebo plus colestipol if the LDL-C was elevated); lovastatin plus colestipol; or niacin plus colestipol. In the conventional therapy group, 46% of patients had disease progression (and no regression) in at least one of nine proximal coronary segments; regression was the only change in 11%. In contrast, progression (as the only change) was seen in only 25% in the niacin plus colestipol group, while regression was observed in 39%. Though not an original endpoint of the trial, clinical events (death, MI, or revascularization for worsening angina) occurred in 10 of 52 patients who received conventional therapy, compared with 2 of 48 who received niacin plus colestipol.

The Harvard Atherosclerosis Reversibility Project (HARP) was a randomized placebo-controlled, 2.5-year study of the effect of a stepped-care antihyperlipidemic drug regimen on 91 patients (80 men and 11 women) with CHD and average baseline TC levels less than 250 mg/dL and ratios of TC to HDL-C greater than 4. Drug treatment consisted of an HMG-CoA reductase inhibitor administered alone as initial therapy followed by addition of varying dosages of either a slow-release nicotinic acid, cholestyramine, or gemfibrozil. Addition of nicotinic acid to the HMG-CoA reductase inhibitor resulted in further statistically significant mean reductions in TC, LDL-C, and TG, as well as a further increase in HDL-C in a majority of patients (40 of 44 patients). The ratios of TC to HDL-C and LDL-C to HDL-C were also significantly reduced by this combination drug regimen *[see Warnings and Precautions (5.2)]*.

14.2 Niacin Extended-Release Tablets Clinical Studies

Placebo-Controlled Clinical Studies in Patients with Primary Hyperlipidemia and Mixed Dyslipidemia: In two randomized, double-blind, parallel, multi-center, placebo-controlled trials, niacin extended-release tablets dosed at 1000 mg, 1500 mg or 2000 mg daily at bedtime with a low-fat snack for 16 weeks (including 4 weeks of dose escalation) favorably altered lipid profiles compared to placebo (Table 3). Women appeared to have a greater response than men at each niacin extended-release tablets dose level (*see Gender Effect,* below).

Table 3. Lipid Response to Niacin Extended-Release Tablets Therapy

	Mean Percent Change from Baseline to Week 16*								
Treatment	**n**	**TC**	**LDL-C**	**HDL-C**	**TC/HDL-C**	**TG**	**Lp(a)**	**Apo B**	**Apo A-I**
Niacin extended-release tablets 1000 mg at bedtime	41	-3	-5	+18	-17	-21	-13	-6	+9
Niacin extended-release tablets 2000 mg at bedtime	41	-10	-14	+22	-25	-28	-27	-16	+8
Placebo	40	0	-1	+4	-3	0	0	+1	+3
Niacin extended-release tablets 1500 mg at bedtime	76	-8	-12	+20	-20	-13	-15	-12	+8
Placebo	73	+2	+1	+2	+1	+12	+2	+1	+2

n = number of patients at baseline;
* Mean percent change from baseline for all niacin extended-release tablets doses was significantly different ($p < 0.05$) from placebo for all lipid parameters shown except Apo A-I at 2000 mg.

In a double-blind, multi-center, forced dose-escalation study, monthly 500 mg increases in niacin extended-release tablets dose resulted in incremental reductions of approximately 5% in LDL-C and Apo B levels in the daily dose range of 500 mg through 2000 mg (Table 4). Women again tended to have a greater response to niacin extended-release tablets than men (*see Gender Effect*, below).

Table 4. Lipid Response in Dose-Escalation Study

		Mean Percent Change from Baseline*							
Treatment	**n**	**TC**	**LDL-C**	**HDL-C**	**TC/HDL-C**	**TG**	**Lp(a)**	**Apo B**	**Apo A-I**
Placebo‡	44	-2	-1	+5	-7	-6	-5	-2	+4
Niacin extended-release tablets	87								
500 mg at bedtime		-2	-3	+10	-10	-5	-3	-2	+5
1000 mg at bedtime		-5	-9	+15	-17	-11	-12	-7	+8
1500 mg at bedtime		-11	-14	+22	-26	-28	-20	-15	+10
2000 mg at bedtime		-12	-17	+26	-29	-35	-24	-16	+12

n = number of patients enrolled;
‡ Placebo data shown are after 24 weeks of placebo treatment.
* For all niacin extended-release tablets doses except 500 mg, mean percent change from baseline was significantly different ($p < 0.05$) from placebo for all lipid parameters shown except Lp(a) and Apo A-I which were significantly different from placebo starting with 1500 mg and 2000 mg, respectively.

Pooled results for major lipids from these three placebo-controlled studies are shown below (Table 5).

Table 5. Selected Lipid Response to Niacin Extended-Release Tablets in Placebo-Controlled Clinical Studies*

		Mean Baseline and Median Percent Change from Baseline (25th, 75th Percentiles)		
Niacin Extended-Release Tablets Dose	**n**	**LDL-C**	**HDL-C**	**TG**
1000 mg at bedtime	104			
Baseline (mg/dL)		218	45	172
Percent Change		-7 (-15, 0)	+14 (+7, +23)	-16 (-34, +3)
1500 mg at bedtime	120			
Baseline (mg/dL)		212	46	171
Percent Change		-13 (-21, -4)	+19 (+9, +31)	-25 (-45, -2)
2000 mg at bedtime	85			
Baseline (mg/dL)		220	44	160
Percent Change		-16 (-26, -7)	+22 (+15, +34)	-38 (-52, -14)

* Represents pooled analyses of results; minimum duration on therapy at each dose was 4 weeks.

Gender Effect:
Combined data from the three placebo-controlled niacin extended-release tablets studies in patients with primary hyperlipidemia and mixed dyslipidemia suggest that, at each niacin extended-release tablets dose level studied, changes in lipid concentrations are greater for women than for men (Table 6).

Table 6. Effect of Gender on Niacin Extended-Release Tablets Dose Response

Niacin Extended-Release Tablets	n	Mean Percent Change from Baseline							
		LDL-C		HDL-C		TG		Apo B	
Dose	(M/F)	M	F	M	F	M	F	M	F
500 mg at bedtime	50/37	-2	-5	+11	+8	-3	-9	-1	-5
1000 mg at bedtime	76/52	-6*	-11*	+14	+20	-10	-20	-5*	-10*
1500 mg at bedtime	104/59	-12	-16	+19	+24	-17	-28	-13	-15
2000 mg at bedtime	75/53	-15	-18	+23	+26	-30	-36	-16	-16

n = number of male/female patients enrolled.
* Percent change significantly different between genders ($p < 0.05$).

Other Patient Populations:
In a double-blind, multi-center, 19-week study the lipid-altering effects of niacin extended-release tablets (forced titration to 2000 mg at bedtime) were compared to baseline in patients whose primary lipid abnormality was a low level of HDL-C (HDL-C ≤40 mg/dL, TG ≤400 mg/dL, and LDL-C ≤160, or <130 mg/dL in the presence of CHD). Results are shown below (Table 7).

Table 7. Lipid Response to Niacin Extended-Release Tablets in Patients with Low HDL-C

	Mean Baseline and Mean Percent Change from Baseline*									
	n	**TC**	**LDL-C**	**HDL-C**	**TC/HDL-C**	**TG**	**Lp(a)†**	**Apo B†**	**Apo A-I†**	**Lp A-I††**
Baseline (mg/dL)	88	190	120	31	6	194	8	106	105	32
Week 19 (% Change)	71	-3	0	+26	-22	-30	-20	-9	+11	+20

n = number of patients
* Mean percent change from baseline was significantly different ($p < 0.05$) for all lipid parameters shown except LDL-C.
† n = 72 at baseline and 69 at week 19.
†† n = 30 at baseline and week 19.

At niacin extended-release tablets 2000 mg/day, median changes from baseline (25th, 75th percentiles) for LDL-C, HDL-C, and TG were -3% (-14, +12%), +27% (+13, +38%), and -33% (-50, -19%), respectively.

14.3 Niacin Extended-Release and Lovastatin Clinical Studies

Combination niacin extended-release and Lovastatin Study: In a multi-center, randomized, double-blind, parallel, 28-week study, a combination tablet of niacin extended-release and lovastatin was compared to each individual component in patients with Type IIa and IIb hyperlipidemia. Using a forced dose-escalation study design, patients received each dose for at least 4 weeks. Patients randomized to treatment with the combination tablet of niacin extended-release and lovastatin initially received 500 mg/20 mg (expressed as mg of niacin/mg of lovastatin) once daily before bedtime. The dose was increased by 500 mg at 4-week intervals (based on the niacin extended-release component) to a maximum dose of 1000 mg/20 mg in one-half of the patients and 2000 mg/40 mg in the other half. The niacin extended-release monotherapy group underwent a similar titration from 500 mg to 2000 mg. The patients randomized to lovastatin monotherapy received 20 mg for 12 weeks titrated to 40 mg for up to 16 weeks. Up to a third of the patients randomized to the combination tablet of niacin extended-release and lovastatin or niacin extended-release monotherapy discontinued prior to Week 28. Results from this study showed that combination therapy decreased LDL-C, TG and Lp(a), and increased HDL-C in a dose-dependent fashion (Tables 8, 9, 10, and 11). Results from this study for LDL-C mean percent change from baseline (the primary efficacy variable) showed that:

1. LDL-lowering with the combination tablet of niacin extended-release and lovastatin was significantly greater than that achieved with lovastatin 40 mg only after 28 weeks of titration to a dose of 2000 mg/40 mg ($p<0.0001$)
2. The combination tablet of niacin extended-release and lovastatin at doses of 1000 mg/20 mg or higher achieved greater LDL-lowering than niacin extended-release ($p<0.0001$)

The LDL-C results are summarized in Table 8.

Table 8. LDL-C mean percent change from baseline

Week	Combination Tablet of Niacin Extended-Release and Lovastatin			Niacin Extended-Release			Lovastatin		
	n*	Dose (mg/mg)	LDL	n*	Dose (mg)	LDL	n*	Dose (mg)	LDL
Baseline	57	–	190.9 mg/dL	61	–	189.7 mg/dL	61	–	185.6 mg/dL
12	47	1000/20	-30%	46	1000	-3%	56	20	-29%
16	45	1000/40	-36%	44	1000	-6%	56	40	-31%
20	42	1500/40	-37%	43	1500	-12%	54	40	-34%
28	42	2000/40	-42%	41	2000	-14%	53	40	-32%

* n = number of patients remaining in trial at each time point

Combination therapy achieved significantly greater HDL-raising compared to lovastatin and niacin extended-release monotherapy at all doses (Table 9).

* n = number of patients remaining in trial at each time point

The Lp(a)-lowering effects of combination therapy and niacin extended-release monotherapy were similar, and both were superior to lovastatin (Table 11). The independent effect of lowering Lp(a) with niacin extended-release or combination therapy on the risk of coronary and cardiovascular morbidity and mortality has not been determined.

Table 11. Lp(a) median percent change from baseline

Week	Combination Tablet of Niacin Extended-Release and Lovastatin			Niacin Extended-Release			Lovastatin		
	n*	Dose (mg/mg)	Lp(a)	n*	Dose (mg)	Lp(a)	n*	Dose (mg)	Lp(a)
Baseline	57	–	34 mg/dL	61	–	41 mg/dL	60	–	42 mg/dL
12	47	1000/20	-9%	46	1000	-8%	55	20	+8%

28	42	2000/40	-22%	41	2000	-32%	52	40	0%

* n = number of patients remaining in trial at each time point

14.4 Niacin Extended-Release and Simvastatin Clinical Studies
In a double-blind, randomized, multicenter, multi-national, active-controlled, 24-week study, the lipid effects of a combination tablet of niacin extended-release and simvastatin were compared to simvastatin 20 mg and 80 mg in 641 patients with type II hyperlipidemia or mixed dyslipidemia. Following a lipid qualification phase, patients were eligible to enter one of two treatment groups. In Group A, patients on simvastatin 20 mg monotherapy, with elevated non-HDL levels and LDL-C levels at goal per the NCEP guidelines, were randomized to one of three treatment arms: combination tablet of niacin extended-release and simvastatin 1000/20 mg, combination tablet of niacin extended-release and simvastatin 2000/20 mg, or simvastatin 20 mg. In Group B, patients on simvastatin 40 mg monotherapy, with elevated non-HDL levels per the NCEP guidelines regardless of attainment of LDL-C goals, were randomized to one of three treatment arms: combination tablet of niacin extended-release and simvastatin 1000/40 mg, combination tablet of niacin extended-release and simvastatin 2000/40 mg, or simvastatin 80 mg. Therapy was initiated at the 500 mg dose of combination tablet of niacin extended-release and simvastatin and increased by 500 mg every four weeks. Thus patients were titrated to the 1000 mg dose of combination tablet of niacin extended-release and simvastatin after four weeks and to the 2000 mg dose of combination tablet of niacin extended-release and simvastatin after 12 weeks. All patients randomized to simvastatin monotherapy received 50 mg immediate-release niacin daily in an attempt to keep the study from becoming unblinded due to flushing in the combination tablet of niacin extended-release and simvastatin groups. Patients were instructed to take one 325 mg aspirin or 200 mg ibuprofen 30 minutes prior to taking the double-blind medication to help minimize flushing effects.

In Group A, the primary efficacy analysis was a comparison of the mean percent change in non-HDL levels between the combination tablet of niacin extended-release and simvastatin 2000/20 mg and simvastatin 20 mg groups, and if statistically significant, then a comparison was conducted between the combination tablet of niacin extended-release and simvastatin 1000/20 mg and simvastatin 20 mg groups. In Group B, the primary efficacy analysis was a determination of whether the mean percent change in non-HDL in the combination tablet of niacin extended-release and simvastatin 2000/40 mg group was non-inferior to the mean percent change in the simvastatin 80 mg group, and if so, whether the mean percent change in non-HDL in the combination tablet of niacin extended-release and simvastatin 1000/40 mg group was non-inferior to the mean percent change in the simvastatin 80 mg group.

In Group A, the non-HDL-C lowering with combination tablet of niacin extended-release and simvastatin 2000/20 and combination tablet of niacin extended-release and simvastatin 1000/20 was statistically significantly greater than that achieved with simvastatin 20 mg after 24 weeks ($p < 0.05$; Table 12). The completion rate after 24 weeks was 72% for the combination tablet of niacin extended-release and simvastatin arms and 88% for the simvastatin 20 mg arm. In Group B, the non-HDL-C lowering with combination tablet of niacin extended-release and simvastatin 2000/40 and combination tablet of niacin extended-release and simvastatin 1000/40 was non-inferior to that achieved with simvastatin 80 mg after 24 weeks (Table 13). The completion rate after 24 weeks was 78% for the combination tablet of niacin extended-release and simvastatin arms and 80% for the simvastatin 80 mg arm.

The combination tablet of niacin extended-release and simvastatin was not superior to simvastatin in lowering LDL-C in either Group A or Group B. However, the combination tablet of niacin extended-release and simvastatin was superior to simvastatin in both groups in lowering TG and raising HDL (Tables 14 and 15).

Table 12. Non-HDL Treatment Response Following 24-Week Treatment Mean Percent Change from Simvastatin 20 mg Treated Baseline

Group A	Combination Tablet of Niacin Extended-Release and Simvastatin 2000/20			Combination Tablet of Niacin Extended-Release and Simvastatin 1000/20			Simvastatin 20		
Week	n*	Dose (mg/mg)	Non-HDL[b]	n*	Dose (mg/mg)	Non-HDL[b]	n*	Dose (mg/mg)	Non-HDL[b]

16 HOW SUPPLIED/STORAGE AND HANDLING
Niacin extended-release tablets, USP are supplied as unscored, pink, film-coated, capsule-shaped tablets containing 500 mg or 1000 mg of niacin USP in an extended-release formulation. Tablets are debossed 'S' on one side and the tablet strength (500 or 1000) on the other side.
Tablets are supplied as follows:

500 mg tablets:
Bottles of 30's with Child Resistant Cap.....NDC 47335-539-83
Bottles of 90's with Child Resistant Cap.....NDC 47335-539-81
Bottles of 100's with Child Resistant Cap.....NDC 47335-539-88
Bottles of 100's with Non Child Resistant Cap.....NDC 47335-539-08
Bottles of 1000's with Non Child Resistant Cap.....NDC 47335-539-18

1000 mg tablets
Bottles of 30's with Child Resistant Cap.....NDC 47335-531-83
Bottles of 90's with Child Resistant Cap.....NDC 47335-531-81
Bottles of 100's with Child Resistant Cap.....NDC 47335-531-88
Bottles of 100's with Non Child Resistant Cap.....NDC 47335-531-08
Bottles of 1000's with Non Child Resistant Cap.....NDC 47335-531-18

Storage: Store at 20° to 25°C (68° to 77°F); excursions permitted between 15° and 30°C (59° and 86°F) [see USP Controlled Room Temperature].

Dispense in a tight container with child-resistant closure.

17 PATIENT COUNSELING INFORMATION

17.1 Patient Counseling

Patients should be advised to adhere to their National Cholesterol Education Program (NCEP) recommended diet, a regular exercise program, and periodic testing of a fasting lipid panel.

Patients should be advised to inform other healthcare professionals prescribing a new medication that they are taking niacin extended-release tablets.

The patient should be informed of the following:

Dosing Time
Niacin extended-release tablets should be taken at bedtime, after a low-fat snack. Administration on an empty stomach is not recommended.

Tablet Integrity
Niacin extended-release tablets should not be broken, crushed or chewed, but should be swallowed whole.

Dosing Interruption
If dosing is interrupted for any length of time, their physician should be contacted prior to restarting therapy; re-titration is recommended.

Muscle Pain
Notify their physician of any unexplained muscle pain, tenderness, or weakness promptly. They should discuss all medication, both prescription and over the counter, with their physician.

Flushing
Flushing (warmth, redness, itching and/or tingling of the skin) is a common side effect of niacin therapy that may subside after several weeks of consistent niacin extended-release tablets use. Flushing may vary in severity and is more likely to occur with initiation of therapy, or during dose increases. By dosing at bedtime, flushing will most likely occur during sleep. However, if awakened by flushing at night, the patient should get up slowly, especially if feeling dizzy, feeling faint, or taking blood pressure medications. Advise patients of the symptoms of flushing and how they differ from the symptoms of a myocardial infarction.

Use of Aspirin Medication
Taking aspirin (up to the recommended dose of 325 mg) approximately 30 minutes before dosing can minimize flushing.

Diet
Avoid ingestion of alcohol, hot beverages and spicy foods around the time of taking niacin extended-release tablets to minimize flushing.

Supplements
Notify their physician if they are taking vitamins or other nutritional supplements containing niacin or nicotinamide.

Dizziness
Notify their physician if symptoms of dizziness occur.

Diabetics
If diabetic, to notify their physician of changes in blood glucose.

Pregnancy
Discuss future pregnancy plans with your patients, and discuss when to stop niacin extended-release tablets if they are trying to conceive. Patients should be advised that if they become pregnant, they should stop taking niacin extended-release tablets and call their healthcare professional.

Breastfeeding
Women who are breastfeeding should be advised to not use niacin extended-release tablets. Patients, who have a lipid disorder and are breastfeeding, should be advised to discuss the options with their healthcare professional.

PATIENT INFORMATION

Niacin (nahy-uh-sin) Extended-Release Tablets, USP

Read this information carefully before you start taking niacin extended-release tablets and each time you get a refill. There may be new information. This information does not take the place of talking with your doctor about your medical condition or your treatment.

What are niacin extended-release tablets?
Niacin extended-release tablets are prescription medicines used with diet and exercise to increase the good cholesterol (HDL) and lower the bad cholesterol (LDL) and fats (triglycerides) in your blood.
- Niacin extended-release tablets can be used by itself or with other cholesterol-lowering medicines
- Niacin extended-release tablets are also used to lower the risk of heart attack in people who have had a heart attack and have high cholesterol.
- In people with coronary artery disease and high cholesterol, niacin extended-release tablets, when used with a bile acid-binding resin (another cholesterol medicine) can slow down or lessen the build-up of plaque (fatty deposits) in your arteries
- In people with heart problems and well-controlled cholesterol, taking niacin extended-release tablets with another cholesterol-lowering medicine (simvastatin) has not been shown to reduce heart attacks or strokes more than taking simvastatin alone.

It is not known if niacin extended-release tablets are safe and effective in children 16 years of age and under.

Who should not take niacin extended-release tablets?

Do not take niacin extended-release tablets if you have:
- liver problems
- a stomach ulcer
- bleeding problems
- an allergy to niacin or any of the ingredients in niacin extended-release tablets. See the end of this leaflet for a complete list of ingredients in niacin extended-release tablets.

What should I tell my doctor before taking niacin extended-release tablets?

Before you take niacin extended-release tablets, tell your doctor, if you:
- have diabetes. Tell your doctor if your blood sugar levels change after you take niacin extended-release tablets.
- have gout
- have kidney problems
- are pregnant or plan to become pregnant. It is not known if niacin extended-release tablets will harm your unborn baby. Talk to your doctor if you are pregnant or plan to become pregnant while taking niacin extended-release tablets.
- are breastfeeding or plan to breastfeed. Niacin can pass into your breast milk. You and your doctor should decide if you will take niacin extended-release tablets or breastfeed. You should not do both. Talk to your doctor about the best way to feed your baby if you take niacin extended-release tablets.

Tell your doctor about all the medicines you take, including prescription and non-prescription medicines, vitamins, herbal supplements or other nutritional supplements containing niacin or nicotinamide. Niacin extended-release tablets and other medicines may affect each other causing side effects. Niacin extended-release tablets may affect the way other medicines work, and other medicines may affect how niacin extended-release tablets work.

Especially tell your doctor if you take:
- other medicines to lower cholesterol or triglycerides
- aspirin
- blood pressure medicines
- blood thinner medicines
- large amounts of alcohol

Know the medicines you take. Keep a list of them to show your doctor and pharmacist when you get a new medicine.

How should I take niacin extended-release tablets?
- Take niacin extended-release tablets exactly as your doctor tells you to take it.
- Take niacin extended-release tablets whole. Do not break, crush or chew niacin extended-release tablets before swallowing.
- Take niacin extended-release tablets 1 time a day at bedtime after a low-fat snack. Niacin extended-release tablets should not be taken on an empty stomach.
- All forms of niacin are not the same as niacin extended-release tablets. Do not switch between forms of niacin without first talking to your doctor as severe liver damage can occur.
- Do not change your dose or stop taking niacin extended-release tablets unless your doctor tells you to.
- If you need to stop taking niacin extended-release tablets, call your doctor before you start taking niacin extended-release tablets again. Your doctor may need to lower your dose of niacin extended-release tablets.
- If you forget to take a dose of niacin extended-release tablets, take it as soon as you remember.
- If you take too many niacin extended-release tablets, call your doctor right away.
- Medicines used to lower your cholesterol called bile acid resins, such as colestipol and cholestyramine, should not be taken at the same time of day as niacin extended-release tablets. You should take niacin extended-release tablets and the bile acid resin medicine at least 4 to 6 hours apart.
- Your doctor may do blood tests before you start taking niacin extended-release tablets and during your treatment. You should see your doctor regularly to check your cholesterol and triglyceride levels and to check for side effects.

What are the possible side effects of niacin extended-release tablets?

Niacin extended-release tablets may cause serious side effects, including:
- **severe liver problems. Signs of liver problems include:**
  - increased tiredness
  - dark colored urine (tea-colored)
  - loss of appetite
  - light colored stools
  - nausea
  - right upper stomach (abdomen) pain
  - yellowing of your skin or whites of your eye
  - itchy skin
- **unexplained muscle pain, tenderness or weakness**
- **high blood sugar level (glucose)**

Call your doctor right away if you have any of the side effects listed above.

The most common side effects of niacin extended-release tablets include:
- flushing
- diarrhea
- nausea
- vomiting
- increased cough
- rash

Flushing is the most common side effect of niacin extended-release tablets. Flushing happens when tiny blood vessels near the surface of the skin (especially on the face, neck, chest and/or back) open wider. Symptoms of flushing may include any or all of the following:
- warmth
- redness
- itching
- tingling of the skin

Flushing does not always happen. If it does, it is usually within 2 to 4 hours after taking a dose of niacin extended-release tablets. Flushing may last for a few hours. Flushing is more likely to happen when you first start taking niacin extended-release tablets or when your dose of niacin extended-release tablets is increased. Flushing may get better after several weeks.

If you wake up at night because of flushing, get up slowly, especially if you:
- feel dizzy or faint
- take blood pressure medicines

To lower your chance of flushing:
- Ask your doctor if you can take aspirin to help lower the flushing side effect from niacin extended-release tablets. You can take aspirin (up to the recommended dose of 325 mg) about 30 minutes before you take niacin extended-release tablets to help lower the flushing side effect.
- Do not drink hot beverages (including coffee), alcohol, or eat spicy foods around the time you take niacin extended-release tablets.
- Take niacin extended-release tablets with a low-fat snack to lessen upset stomach.

People with high cholesterol and heart disease are at risk for a heart attack. Symptoms of a heart attack may be different from a flushing reaction from niacin extended-release tablets. **The following may be symptoms of a heart attack due to heart disease and not a flushing reaction:**
- chest pain
- pain in other areas of your upper body such as one or both arms, back, neck, jaw or stomach
- shortness of breath
- sweating
- nausea
- lightheadedness

The chest pain you have with a heart attack may feel like uncomfortable pressure, squeezing, fullness or pain that lasts more than a few minutes, or that goes away and comes back. Heart attacks may be sudden and intense, but often start slowly, with mild pain or discomfort.

Call your doctor right away if you have any symptoms of a heart attack.

Tell your doctor if you have any side effect that bothers you or does not go away.

These are not all the possible side effects of niacin extended-release tablets. For more information, ask your doctor or pharmacist.

Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.

How should I store niacin extended-release tablets?
- Store at 20° to 25°C (68° to 77°F); excursions permitted between 15° and 30°C (59° and 86°F).

Keep niacin extended-release tablets and all medicines out of the reach of children.

General information about the safe and effective use of niacin extended-release tablets

Medicines are sometimes prescribed for purposes other than those listed in a Patient Information leaflet. Do not use niacin extended-release tablets for a condition for which it was not prescribed. Do not give niacin extended-release tablets to other people, even if they have the same symptoms that you have. It may harm them.

This leaflet summarizes the most important information about niacin extended-release tablets. If you would like more information, talk with your doctor. You can ask your pharmacist or doctor for information about niacin extended-release tablets that is written for health professionals.

For more information, call 1-800-818-4555.

What are the ingredients in niacin extended-release tablets?
Active ingredient:
niacin
Inactive Ingredients:
hypromellose, hydrogenated vegetable oil Type I, glyceryl behenate, colloidal silicon dioxide, magnesium stearate, polyvinyl alcohol-partially hydrolyzed, titanium dioxide, polyethylene glycol, talc, iron oxide red and iron oxide yellow.

This Patient Information has been approved by the U.S. Food and Drug Administration.

PATIENT INFORMATION

Niacin (nahy-uh-sin) Extended-Release Tablets, USP

Read this information carefully before you start taking niacin extended-release tablets and each time you get a refill. There may be new information. This information does not take the place of talking with your doctor about your medical condition or your treatment.

What are niacin extended-release tablets?
Niacin extended-release tablets are prescription medicines used with diet and exercise to increase the good cholesterol (HDL) and lower the bad cholesterol (LDL) and fats (triglycerides) in your blood.

- Niacin extended-release tablets can be used by itself or with other cholesterol-lowering medicines
- Niacin extended-release tablets are also used to lower the risk of heart attack in people who have had a heart attack and have high cholesterol.
- In people with coronary artery disease and high cholesterol, niacin extended-release tablets, when used with a bile acid-binding resin (another cholesterol medicine) can slow down or lessen the build-up of plaque (fatty deposits) in your arteries
- In people with heart problems and well-controlled cholesterol, taking niacin extended-release tablets with another cholesterol-lowering medicine (simvastatin) has not been shown to reduce heart attacks or strokes more than taking simvastatin alone.

It is not known if niacin extended-release tablets are safe and effective in children 16 years of age and under.

Who should not take niacin extended-release tablets?

Do not take niacin extended-release tablets if you have:

- liver problems
- a stomach ulcer
- bleeding problems
- an allergy to niacin or any of the ingredients in niacin extended-release tablets. See the end of this leaflet for a complete list of ingredients in niacin extended-release tablets.

What should I tell my doctor before taking niacin extended-release tablets?

Before you take niacin extended-release tablets, tell your doctor, if you:

- have diabetes. Tell your doctor if your blood sugar levels change after you take niacin extended-release tablets.
- have gout
- have kidney problems
- are pregnant or plan to become pregnant. It is not known if niacin extended-release tablets will harm your unborn baby. Talk to your doctor if you are pregnant or plan to become pregnant while taking niacin extended-release tablets.
- are breastfeeding or plan to breastfeed. Niacin can pass into your breast milk. You and your doctor should decide if you will take niacin extended-release tablets or breastfeed. You should not do both. Talk to your doctor about the best way to feed your baby if you take niacin extended-release tablets.

Tell your doctor about all the medicines you take, including prescription and non-prescription medicines, vitamins, herbal supplements or other nutritional supplements containing niacin or nicotinamide. Niacin extended-release tablets and other medicines may affect each other causing side effects. Niacin extended-release tablets may affect the way other medicines work, and other medicines may affect how niacin extended-release tablets work.

Especially tell your doctor if you take:

- other medicines to lower cholesterol or triglycerides
- aspirin
- blood pressure medicines
- blood thinner medicines
- large amounts of alcohol

Know the medicines you take. Keep a list of them to show your doctor and pharmacist when you get a new medicine.

How should I take niacin extended-release tablets?

- Take niacin extended-release tablets exactly as your doctor tells you to take it.
- Take niacin extended-release tablets whole. Do not break, crush or chew niacin extended-release tablets before swallowing.
- Take niacin extended-release tablets 1 time a day at bedtime after a low-fat snack. Niacin extended-release tablets should not be taken on an empty stomach.
- All forms of niacin are not the same as niacin extended-release tablets. Do not switch between forms of niacin without first talking to your doctor as severe liver damage can occur.
- Do not change your dose or stop taking niacin extended-release tablets unless your doctor tells you to.
- If you need to stop taking niacin extended-release tablets, call your doctor before you start taking niacin extended-release tablets again. Your doctor may need to lower your dose of niacin extended-release tablets.
- If you forget to take a dose of niacin extended-release tablets, take it as soon as you remember.
- If you take too many niacin extended-release tablets, call your doctor right away.
- Medicines used to lower your cholesterol called bile acid resins, such as colestipol and cholestyramine, should not be taken at the same time of day as niacin extended-release tablets. You should take niacin extended-release tablets and the bile acid resin medicine at least 4 to 6 hours apart.
- Your doctor may do blood tests before you start taking niacin extended-release tablets and during your treatment. You should see your doctor regularly to check your cholesterol and triglyceride levels and to check for side effects.

What are the possible side effects of niacin extended-release tablets?

Niacin extended-release tablets may cause serious side effects, including:

- **severe liver problems. Signs of liver problems include:**
  - increased tiredness
  - dark colored urine (tea-colored)
  - loss of appetite
  - light colored stools
  - nausea
  - right upper stomach (abdomen) pain
  - yellowing of your skin or whites of your eye
  - itchy skin
- **unexplained muscle pain, tenderness or weakness**
- **high blood sugar level (glucose)**

Call your doctor right away if you have any of the side effects listed above.

The most common side effects of niacin extended-release tablets include:

- flushing
- diarrhea
- nausea
- vomiting
- increased cough
- rash

Flushing is the most common side effect of niacin extended-release tablets. Flushing happens when tiny blood vessels near the surface of the skin (especially on the face, neck, chest and/or back) open wider. Symptoms of flushing may include any or all of the following:

- warmth
- redness
- itching
- tingling of the skin

Flushing does not always happen. If it does, it is usually within 2 to 4 hours after taking a dose of niacin extended-release tablets. Flushing may last for a few hours. Flushing is more likely to happen when you first start taking niacin extended-release tablets or when your dose of niacin extended-release tablets is increased. Flushing may get better after several weeks.

If you wake up at night because of flushing, get up slowly, especially if you:

- feel dizzy or faint
- take blood pressure medicines

To lower your chance of flushing:

- Ask your doctor if you can take aspirin to help lower the flushing side effect from niacin extended-release tablets. You can take aspirin (up to the recommended dose of 325 mg) about 30 minutes before you take niacin extended-release tablets to help lower the flushing side effect.

- Do not drink hot beverages (including coffee), alcohol, or eat spicy foods around the time you take niacin extended-release tablets.
- Take niacin extended-release tablets with a low-fat snack to lessen upset stomach.

People with high cholesterol and heart disease are at risk for a heart attack. Symptoms of a heart attack may be different from a flushing reaction from niacin extended-release tablets. **The following may be symptoms of a heart attack due to heart disease and not a flushing reaction:**
- chest pain
- pain in other areas of your upper body such as one or both arms, back, neck, jaw or stomach
- shortness of breath
- sweating
- nausea
- lightheadedness

The chest pain you have with a heart attack may feel like uncomfortable pressure, squeezing, fullness or pain that lasts more than a few minutes, or that goes away and comes back. Heart attacks may be sudden and intense, but often start slowly, with mild pain or discomfort.

Call your doctor right away if you have any symptoms of a heart attack.

Tell your doctor if you have any side effect that bothers you or does not go away.

These are not all the possible side effects of niacin extended-release tablets. For more information, ask your doctor or pharmacist.

Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.

How should I store niacin extended-release tablets?
- Store at 20° to 25°C (68° to 77°F); excursions permitted between 15° and 30°C (59° and 86°F)

Keep niacin extended-release tablets and all medicines out of the reach of children.

General information about the safe and effective use of niacin extended-release tablets
Medicines are sometimes prescribed for purposes other than those listed in a Patient Information leaflet. Do not use niacin extended-release tablets for a condition for which it was not prescribed. Do not give niacin extended-release tablets to other people, even if they have the same symptoms that you have. It may harm them.

This leaflet summarizes the most important information about niacin extended-release tablets. If you would like more information, talk with your doctor. You can ask your pharmacist or doctor for information about niacin extended-release tablets that is written for health professionals.

For more information, call 1-800-818-4555.

What are the ingredients in niacin extended-release tablets?
Active ingredient:
niacin
Inactive Ingredients:
hypromellose, hydrogenated vegetable oil Type I, glyceryl behenate, colloidal silicon dioxide, magnesium stearate, polyvinyl alcohol-partially hydrolyzed, titanium dioxide, polyethylene glycol, talc, iron oxide red and iron oxide yellow.

This Patient Information has been approved by the U.S. Food and Drug Administration.

REVISIONS NEEDED POST APPROVAL?

NOTES/QUESTIONS TO THE CHEMIST/BIO REVIEWER/MICRO REVIEWER:

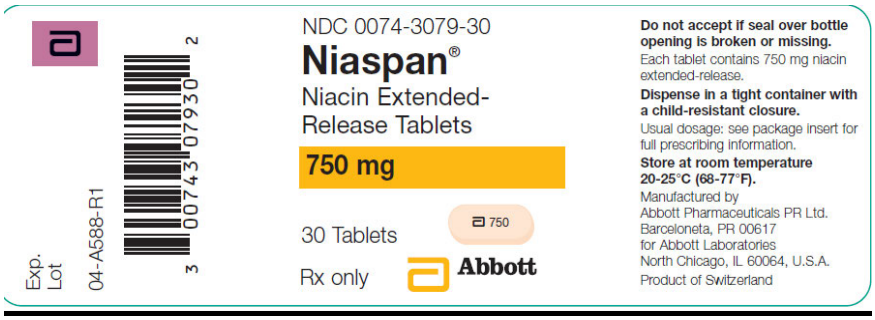
Review Summary

Labeling Submitted	Date submitted	Final or Draft	Recommendation
CONTAINER Bottles of 30s, 90s, 100s, 1000s	4/2/2014	Final	Acceptable for approval
INSERT	4/2/2014	Final	Acceptable for approval
PATIENT INFORMATION LEAFLET	3/21/2014	Final	Acceptable for approval

FOR THE RECORD: Please note the first three review cycles were completed by labeling reviewer Thuyanh Vu.

Please note: The firm provided a combined insert with the 750 mg strength tablets (filed under ANDA 201273). The insert for ANDA 200484 has only the 500 mg and 1000 mg strengths and may be approved before or at the same time as ANDA 201273.

1. **MODEL LABELING:** This review is based on the labeling Niaspan® (niacin extended-release) Tablets (NDA 020381/S-048), approved February 21, 2013. This labeling supplement provided for revisions to the PI and PPI to include information from the clinical trial "Atherothrombosis Intervention in Metabolic Syndrome with Low HDL/High Triglyceride and Impact on Global Health Outcomes (AIM-HIGH)".



MedWatch –(checked March 25, 2014)

Niacin Extended-Release Tablets
Packaging and Storage: Preserve in tight containers.

***Easily Correctable Deficiency Labeling submitted* 4/2/2014**

Response-1
Please note that Sun's proposed drug product does not meet the USP dissolution test hence the disclaimer "USP Dissolution Test Pending" has been added to the end of the description section of Sun's package insert.

Chemistry review dated 6/6/2013:

With this amendment, Sun's drug product now complies with current USP monograph criteria, except dissolution test. Dissolution test specifications are per DBE recommendations. Upon approval of ANDA 200484, Sun shall submit a petition to USP for inclusion of Sun's dissolution method in the monograph.

3. **PATENT AND EXCLUSIVITY** (checked March 25, 2014)

Patent Data – NDA 20381

No	Expiration	Use Code	Use	How filed	Labeling Impact
6080428	May 27, 2017	U-1138 U-1139 U-1140 U-1141 U-331	Refer to definition below	PIV	None
6459035	Mar 15, 2018	U-1142 U-1143 U-1144 U-1145 U-768	Refer to definition below	PIV	None

Firm submitted cert IV to all patents in original submission.

From Cover letter in amendment dated 3/21/2014

Sun's ANDA shall be eligible for final approval on the expiration of 180 day's exclusivity period of the first filer on 20 March, 2014. Consequently we hereby request you to grant us final approval for this ANDA.

Patent and Exclusivity:

The court order dismissing the suit filed by Abbvie Inc. and Abbvie Respiratory LLC against Sun in connection with Sun's above mentioned ANDA has already been submitted to FDA dated 6 March, 2013.

As requested by agency, information on patent/ exclusivity for Sun's Niacin Extended-Release Tablets, 750 mg (ANDA # 201273), the following information has also been provided for subject ANDA:

- Sun's Civil Actions (Delaware cases - C.A. No. 10-488, & C.A. No. 11-1190) were consolidated into C.A.No. 10-112. The complaint copy of C.A. No. 10-488, & C.A. No. 11-1190 and also copy of consolidation orders have been provided herewith for your ready reference in section ***1.3.5.2***.
- Sun's ANDA #200484 (500mg, 1000mg) for Niacin extended release tablets was filed with a paragraph IV certification to the '035 patent on September 30, 2009. Notice letter to that effect was sent to the patentee/NDA holder on January 04, 2010. On September 27, 2011, Sun submitted claim-by-claim split certification to the '035 patent for this ANDA, i.e. Sun certified that it maintained its paragraph IV certification with respect to some claims of the '035 patent, while converting certification to claims 2-5 and 11-30 of the '035 patent to sec viii. This amendment was accompanied by labeling amendment that carvedout uses covered by claims 2-5 and 11-30 of the '035 patent from Sun's label in the ANDA. However, FDA communication dated November 30, 2011 informed Sun that such carve-out was not permissible, as the patent use-code did not support such carve-out. In response, Sun amended back the certification to the '035 patent to a paragraph IV on December 20, 2011.

Sun believes that the original 2010 notice letter sent on the '035 patent meet the statutory requirements, as the later-filed split certification was withdrawn and replaced with the original paragraph IV certification. To the extent this reconversion back to paragraph IV certification requires a fresh notice letter, we believe that, that is moot in view of the fact that Sun now has a license from the patent holder on the '035 patent. As communicated earlier to FDA, this license agreement ended the litigation, and therefore, the 30-month stay on approval of the Sun ANDA.

***Code Definition**

U-331 METHOD OF TREATING HYPERLIPIDEMIA WITH NICOTINIC ACID BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT

U-768 A METHOD OF REDUCING THE CAPACITY OF EXTENDED RELEASE NICOTINIC ACID TO PROVOKE A FLUSHING REACTION BY PRETREATING AN INDIVIDUAL WITH A FLUSH INHIBITING AGENT PRIOR TO THE ADMINISTRATION OF THE EXTENDED RELEASE NICOTINIC ACID

U-1138 TREATMENT OF PRIMARY AND MIXED DYSLIPIDEMIA BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT

U-1143 REDUCTION IN RISK OF RECURRENT NONFATAL MYOCARDIAL INFARCTION BY DOSING ONCE PER DAY IN THE EVENING OR A T NIGHT, WITH PRETREATMENT WITH A FLUSH INHIBITIN AGENT SUCH AS ASPIRIN

U-1144 REDUCTION IN ELEVATED TC AND LDL-C BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT, WITH PRETREATMENT WITH A FLUSH INHIBITIN AGENT SUCH AS ASPIRIN

U-1145 REDUCTION IN TG BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT, WITH PRETREATMENT WITH A FLUSH INHIBITING AGENT SUCH AS ASPIRIN

Exclusivity Data– There is no unexpired exclusivity for this product.

4. **INACTIVE INGREDIENTS [2.3.P.1-original submission]**

The description of the inactive ingredients in the insert labeling appears accurate according to the composition statement.

The inactive ingredients are: hypromellose, hydrogenated vegetable oil Type I, glyceryl behenate, colloidal silicon dioxide, magnesium stearate, polyvinyl alcohol-partially hydrolyzed, titanium dioxide, polyethylene glycol, talc, iron oxide red and iron oxide yellow.

5. **MANUFACTURING FACILITY[2.3.P.3-original submission]**

Sun Pharma Laboratories Limited-Dadra
Survey No. 259/15,
Dadra-396 191
UT of Dadra & Nagar Haveli,
India

6. **FINISHED PRODUCT DESCRIPTION**

The tablet debossing has been accurately described in the HOW SUPPLIED section as required by 21 CFR 206,et al. (Imprinting of Solid Oral Dosage Form Products for Human Use; Final Rule, effective 9/13/95). YES [2.3.P.1-original submission]

RLD: Unscored, medium orange, film-coated, capsuleshaped tablets containing 500, 750 or 1000mg of niacin in an extended-release formulation. Tablets are debossed KOS on one side and the tablet strength (500, 750 or 1000) on the other side

ANDA: unscored, pink colored, capsule shaped, film coated tablets with "500" or "1000" debossed on one side and "S" on other side.

7. **STORAGE STATEMENT AND DISPENSING RECOMMENDATIONS**

RLD: Store at room temperature (20 to 25°C or 68 to 77°F). Dispense in a tight container with child-resistant closure.

ANDA: Store at 20° to 25°C (68° to 77°F); excursions permitted to 15°and 30°C (59° and 86°F). [see USP Controlled Room Temperature]. Dispense in a tight container with child-resistant closure.

8. **PRODUCT LINE**

RLD: bottles of 100s

ANDA: bottles of 30s, 90s, 100s and 1000s (both strengths)

Bottles of 30s, 90s and 100s- CRC

Bottles of 100s, 1000s- non CRC

9. **CONTAINER/CLOSURE**

Module 3.2.P.7.

Strength	Count	Packaging component		(b) (4)
		White round HDPE Bottles	Polypropylene closures	
500 mg	30's	60 cc	33 mm CRC	
	100's	120 cc	38 mm CRC	
	100's	120 cc	38 mm NCRC	
	1000's	950 cc	53 mm NCRC	
1000 mg	30's	75 cc	33 mm CRC	
	100's	300 cc	53 mm CRC	
	100's	300 cc	53 mm NCRC	
	1000's	1500 cc	89 mm NCRC	

CRC : Child resistant closure
NCRC : Non Child resistant closure

In AF dated 4/20/10, firm added 90s count size.

- Additional count of 90's is also proposed for all three strengths. Packaging configuration for this count is given below:

Counts	*Strength*	*Bottle Size*	*Cap Size*	(b) (4)
90's CRC	500 mg	120 cc	38 mm	
	1000 mg	300 cc	53 mm	
Supplier Name	(b) (4)			

10. BIOAVAILABILITY/BIOEQUIVALENCE

Bio results adequate as of review dated 10/17/2011.

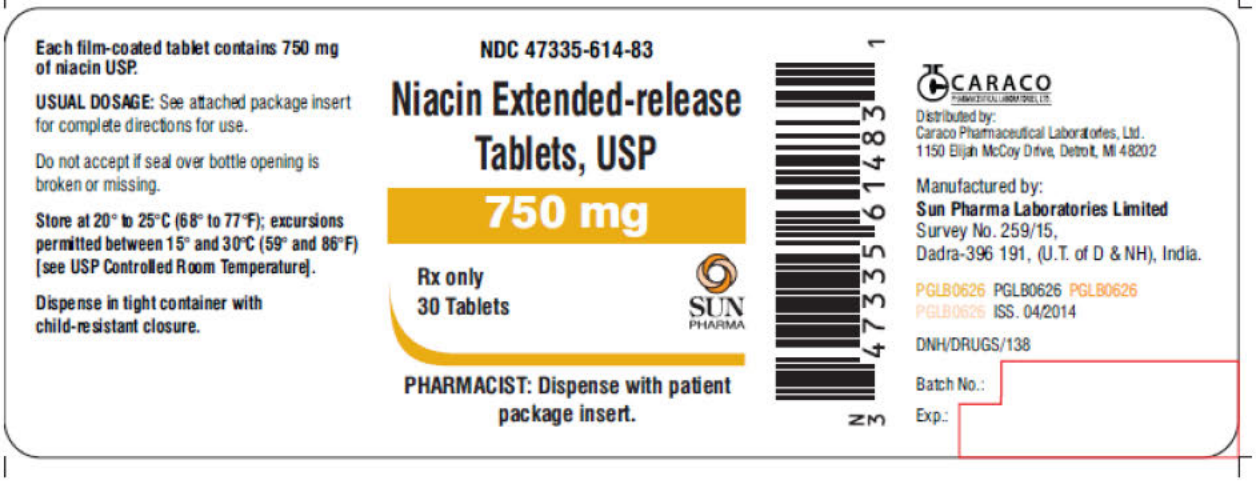
The dissolution testing on all strengths using the FDA-recommended method previously found acceptable.

11. RELATED APPLICATIONS

This review- ANDA 200484 Niacin Extended-release Tablets (Pending) submitted 4/2/2014

- In the amendment dated 4/2/2014, the firm revised the container labels by using lower case "r" in "release" in the established name.
- In the amendment date 3/21/2014, the firm revised the container label so that the colors do not conflict with the colors of the RLD.

ANDA 201273 Niacin Extended-release Tablets 750 mg (Pending) submitted 4/2/2014



12. **SPL DATA ELEMENTS (submitted 3/21/2014)**

ANDA

500 mg: Size = 17 mm

1000 mg: Size = 19 mm

RLD:

500 mg: Size = 17 mm

1000 mg: Size = 19 mm

13. **AMENDMENT dated 3/21/2014**

Labeling comment:

c. 12.3 Pharmacokinetics, Absorption
Upon further review, please revise the second paragraph to read as follows.
"Single-dose bioavailability studies have demonstrated that the 500 mg and 1000 mg tablet strengths are dosage form equivalent but the 500 mg and 750 mg tablet strengths are not dosage form equivalent."

Under section 12.3 Pharmacokinetics, Absorption: The firm revised the second paragraph to be the same as the reference listed drug and it read as follows:

Single-dose bioavailability studies have demonstrated that the 500 mg and 1000 mg tablet strengths are dosage form equivalent but the 500 mg and 750 mg tablet strengths are not dosage form equivalent.

The information in the emails below supports the decision for the firm to follow the RLD in section 12.3 of the insert labeling.

The firm revised the insert in section 12.3 as request by labeling reviewer in an email correspondence dated 7/20/11 to read (b) (4) This is in the 12.3 Pharmacokinetics, Absorption section.

From:
Sent: Friday, December 21, 2012 1:03 PM
To:
Subject: FW: Question on niacin ER Tab

The firm was asked to revise to (b) (4) However, per Agency's email, firm did not really need to revise. Sun decided to revise anyway per my instructions. At this point in time, we could approve with the statement as it stands but firm could revise back to the original statement post approval.

From:
Sent: Friday, January 13, 2012 7:35 AM
To:
Subject: RE: Question on niacin ER Tab

If the firm has this statement:

"Single-dose bioavailability studies have demonstrated that the 500 mg and 1000 mg tablet strengths are
dosage form equivalent but the 500 mg and 750 mg tablet strengths are not dosage form equivalent

Then, it's acceptable. Don't ask the firm to revise to (b) (4)

Most firms would have the first statement b/c that statement follows the RLD. Hope this clears it up.

From:
Sent: Thursday, January 12, 2012 3:52 PM
To:
Subject: RE: Question on niacin ER Tab

So, just to be clear - I don't have to ask any firms to add the sentence "in their labeling?

I read the other email you sent, but I am a little confused still.

From:
Sent: Thursday, January 12, 2012 3:38 PM
To:
Subject: RE: Question on niacin ER Tab

Don't worry about the statement. There's a guidance from the Bio group that chemistry wasn't aware of. I'll forward you the email.

From:
Sent: Thursday, January 12, 2012 3:36 PM
To:
Subject: Question on niacin ER Tab

In reference to the email chain in darrts:

<< File: Pharmacokinetics email chain.pdf >>

Do I need to ask all firms to include the following statement in the labeling or is it on a case by case basis?

REVIEW OF PROFESSIONAL LABELING (5th cycle)

ANDA Number:	200484
Date of Submission:	March 21, 2014
Applicant:	Sun Pharma Global FZE
Established Name and Strength:	Niacin Extended-release Tablets USP, 500 mg and 1000 mg
Proposed Proprietary Name:	None

Labeling Comments below are considered:

☒ Minor Deficiency *

* Please note that the RPM may change the status from Minor Deficiency to Easily Correctable Deficiency if other disciplines are acceptable.

☐ No Comments (Labeling Approval Summary or Tentative Approval Summary)

RPM Note - Labeling comments to be sent to the firm start below:

Labeling Deficiencies determined on March 26, 2014, based on your submission dated March 21, 2014.

1. GENERAL COMMENT:

   Does your product meet the USP dissolution test? If your product does not meet the USP dissolution test, please add the disclaimer "USP Dissolution Test Pending" to the end of the DESCRIPTION section in your insert labeling.

2. CONTAINER:

   a. We note that the labels submitted in the amendment dated March 21, 2014, contains a logo for the distributor and a logo for the manufacturer. The labels submitted November 21, 2011, contained only the manufacturer's logo. Please comment.

   b. We encourage you to revise the established name to read "Niacin Extended-release Tablets, USP" [use lower case "r" in "release"]. Please note that this deficiency is annual reportable.

3. INSERT:

   a. WARNINGS AND PRECAUTIONS, Mortality and Coronary Heart Disease Morbidity: Replace "niacin" with "niacin extended-release" except in the section of the sentence as follows. "…or matching placebo (IR Niacin, 100 to 150 mg, n = 1696)."

   b. ADVERSE REACTIONS, Clinical Studies Experience: In the last paragraph that begins with "In AIM-HIGH involving 3, 414 patients…" replace "niacin" with "niacin extended-release" except in the section of the sentence as follows. "…or matching

placebo (IR Niacin, 100 mg to 150 mg, n = 1696)."

c. Please refer to container comment 2(a).

4. PATIENT INFORMATION LEAFLET:

Please refer to container comment 2(a).

Submit your revised labeling electronically in final print format.

To facilitate review of your next submission, please provide a side-by-side comparison of your proposed labeling with your last submitted labeling with all differences annotated and explained.

Prior to the submission of your amendment, please check labeling resources, including DRUGS@FDA, the Electronic Orange Book and the NF-USP online, for recent updates and make any necessary revisions to your labels and labeling.

In order to keep ANDA labeling current, we suggest that you subscribe to the daily or weekly updates of new documents posted on the CDER web site at the following address - http://service.govdelivery.com/service/subscribe.html?code=USFDA_17.

Note RPM - Labeling comments end here

Detailed View: Safety Labeling Changes Approved By FDA Center for Drug Evaluation and Research (CDER) – February 2013
Revisions were made to the WARNINGS AND PRECAUTIONS, Mortality and Coronary Heart Disease Morbidity and ADVERSE REACTIONS, Clinical Studies Experience sections.

2. **USP -36: (checked March 25, 2014)**

Niacin Extended-Release Tablets
Packaging and Storage: Preserve in tight containers.

Chemistry review dated 6/6/2013:

Revised October 2013

With this amendment, Sun's drug product now complies with current USP monograph criteria, except dissolution test. Dissolution test specifications are per DBE recommendations. Upon approval of ANDA 200484, Sun shall submit a petition to USP for inclusion of Sun's dissolution method in the monograph.

3. **PATENT AND EXCLUSIVITY** (checked March 25, 2014)

Patent Data – NDA 20381

No	Expiration	Use Code	Use	How filed	Labeling Impact
6080428	May 27, 2017	U-1138 U-1139 U-1140 U-1141 U-331	Refer to definition below	PIV	None
6459035	Mar 15, 2018	U-1142 U-1143 U-1144 U-1145 U-768	Refer to definition below	PIV	None

Firm submitted cert IV to all patents in original submission.

From Cover letter in amendment dated 3/21/2014

Sun's ANDA shall be eligible for final approval on the expiration of 180 day's exclusivity period of the first filer on 20 March, 2014. Consequently we hereby request you to grant us final approval for this ANDA.

Patent and Exclusivity:

The court order dismissing the suit filed by Abbvie Inc. and Abbvie Respiratory LLC against Sun in connection with Sun's above mentioned ANDA has already been submitted to FDA dated 6 March, 2013.

As requested by agency, information on patent/ exclusivity for Sun's Niacin Extended-Release Tablets, 750 mg (ANDA # 201273), the following information has also been provided for subject ANDA:

- Sun's Civil Actions (Delaware cases - C.A. No. 10-488, & C.A. No. 11-1190) were consolidated into C.A.No. 10-112. The complaint copy of C.A. No. 10-488, & C.A. No. 11-1190 and also copy of consolidation orders have been provided herewith for your ready reference in section ***1.3.5.2***.
- Sun's ANDA #200484 (500mg, 1000mg) for Niacin extended release tablets was filed with a paragraph IV certification to the '035 patent on September 30, 2009. Notice letter to that effect was sent to the patentee/NDA holder on January 04, 2010. On September 27, 2011, Sun submitted claim-by-claim split certification to the '035 patent for this ANDA, i.e. Sun certified that it maintained its paragraph IV certification with respect to some claims of the '035 patent, while converting certification to claims 2-5 and 11-30 of the '035 patent to sec viii. This amendment was accompanied by labeling amendment that carvedout uses covered by claims 2-5 and 11-30 of the '035 patent from Sun's label in the ANDA. However, FDA communication dated November 30, 2011 informed Sun that such carve-out was not permissible, as the patent use-code did not support such carve-out. In response, Sun amended back the certification to the '035 patent to a paragraph IV on December 20, 2011.

Sun believes that the original 2010 notice letter sent on the '035 patent meet the statutory requirements, as the later-filed split certification was withdrawn and replaced with the original paragraph IV certification. To the extent this reconversion back to paragraph IV certification requires a fresh notice letter, we believe that, that is moot in view of the fact that Sun now has a license from the patent holder on the '035 patent. As communicated earlier to FDA, this license agreement ended the litigation, and therefore, the 30-month stay on approval of the Sun ANDA.

U-1141 REDUCTION IN TG BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT

U-1142 TREATMENT OF PRIMARY AND MIXED DYSLIPIDEMIA BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT WITH PRETREATMENT WITH A FLUSH INHIBITING AGENT SUCH AS ASPIRIN

U-1143 REDUCTION IN RISK OF RECURRENT NONFATAL MYOCARDIAL INFARCTION BY DOSING ONCE PER DAY IN THE EVENING OR A T NIGHT, WITH PRETREATMENT WITH A FLUSH INHIBITIN AGENT SUCH AS ASPIRIN

U-1144 REDUCTION IN ELEVATED TC AND LDL-C BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT, WITH PRETREATMENT WITH A FLUSH INHIBITIN AGENT SUCH AS ASPIRIN

U-1145 REDUCTION IN TG BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT, WITH PRETREATMENT WITH A FLUSH INHIBITING AGENT SUCH AS ASPIRIN

Exclusivity Data– There is no unexpired exclusivity for this product.

Revised October 2013

4. **INACTIVE INGREDIENTS [2.3.P.1-original submission]**

The description of the inactive ingredients in the insert labeling appears accurate according to the composition statement.

The inactive ingredients are: hypromellose, hydrogenated vegetable oil Type I, glyceryl behenate, colloidal silicon dioxide, magnesium stearate, polyvinyl alcohol-partially hydrolyzed, titanium dioxide, polyethylene glycol, talc, iron oxide red and iron oxide yellow.

5. **MANUFACTURING FACILITY[2.3.P.3-original submission]**

Sun Pharmaceutical Industries- Dadra
Survey No. 259/15,
Dadra-396 191
UT of Dadra & Nagar Haveli,
India

6. **FINISHED PRODUCT DESCRIPTION**

The tablet debossing has been accurately described in the HOW SUPPLIED section as required by 21 CFR 206,et al. (Imprinting of Solid Oral Dosage Form Products for Human Use; Final Rule, effective 9/13/95). YES [2.3.P.1-original submission]

RLD: Unscored, medium orange, film-coated, capsuleshaped tablets containing 500, 750 or 1000mg of niacin in an extended-release formulation. Tablets are debossed KOS on one side and the tablet strength (500, 750 or 1000) on the other side

ANDA: unscored, pink colored, capsule shaped, film coated tablets with "1000" debossed on one side and "S" on other side.

7. **STORAGE STATEMENT AND DISPENSING RECOMMENDATIONS**

RLD: Store at room temperature (20 to 25°C or 68 to 77°F). Dispense in a tight container with child-resistant closure.

ANDA: Store at 20° to 25°C (68° to 77°F); excursions permitted to 15°and 30°C (59° and 86°F). [see USP Controlled Room Temperature]. Dispense in a tight container with child-resistant closure.

8. **PRODUCT LINE**

RLD: bottles of 100s

ANDA: bottles of 30s, 90s, 100s and 1000s (both strengths)

9. **CONTAINER/CLOSURE**

Module 3.2.P.7.

Strength	Count	Packaging component		(b) (4)
		White round HDPE Bottles	Polypropylene closures	
500 mg	30's	60 cc	33 mm CRC	
	100's	120 cc	38 mm CRC	
	100's	120 cc	38 mm NCRC	
	1000's	950 cc	53 mm NCRC	
1000 mg	30's	75 cc	33 mm CRC	
	100's	300 cc	53 mm CRC	
	100's	300 cc	53 mm NCRC	
	1000's	1500 cc	89 mm NCRC	

CRC : Child resistant closure
NCRC : Non Child resistant closure

In AF dated 4/20/10, firm added 90s count size.

- Additional count of 90's is also proposed for all three strengths. Packaging configuration for this count is given below:

Counts	*Strength*	*Bottle Size*	*Cap Size*	(b) (4)
90's CRC	500 mg	120 cc	38 mm	
	1000 mg	300 cc	53 mm	
Supplier Name		(b) (4)		

10. **BIOAVAILABILITY/BIOEQUIVALENCE**

Bio results adequate as of review dated 10/17/2011.

The dissolution testing on all strengths using the FDA-recommended method was previously found acceptable.

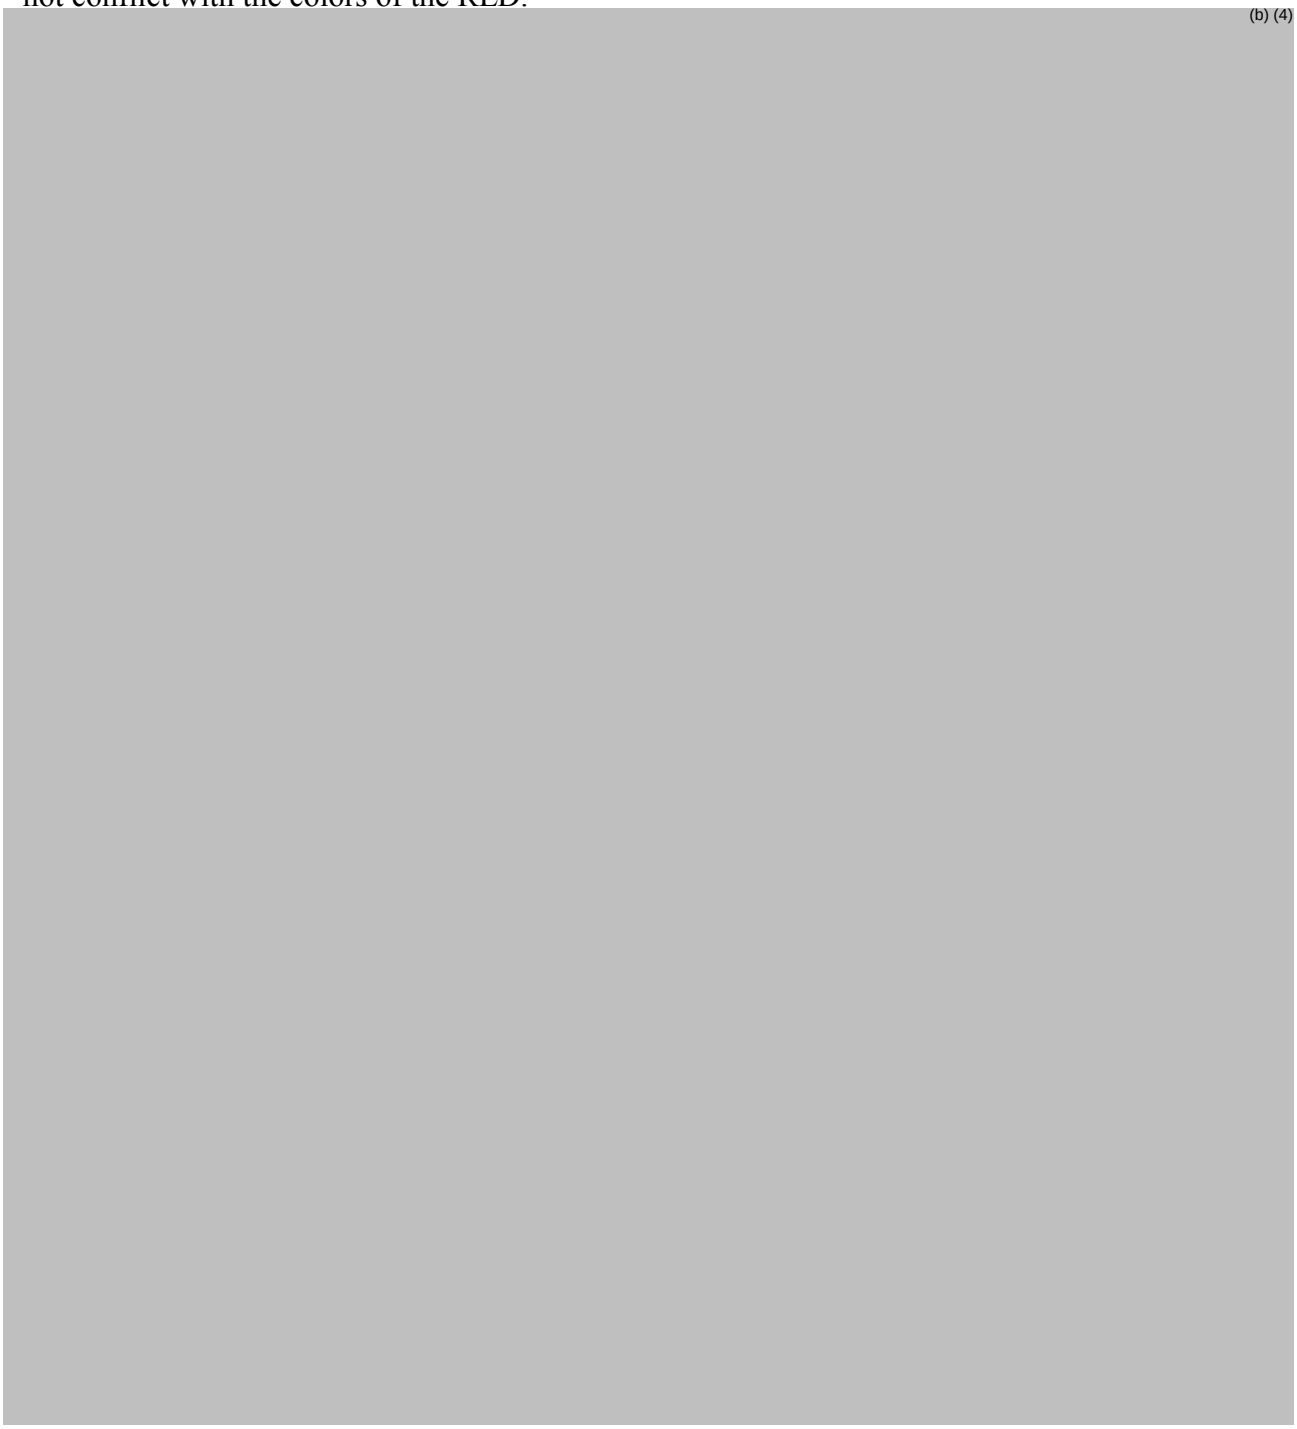
Revised October 2013

11. **RELATED APPLICATIONS**

This review- ANDA 200484 Niacin Extended-release Tablets (Pending) submitted 3/21/2014

In the amendment date 3/21/2014, the firm revised the container label so that the colors do not conflict with the colors of the RLD.

(b) (4)



12. **SPL DATA ELEMENTS (submitted 3/21/2014)**

ANDA

Revised October 2013

500 mg

Color	**PINK**	**Score**	**no score**

1000 mg:

Color	**PINK**	**Score**	**no score**
Shape	**CAPSULE**	**Size**	**19mm**
Flavor		**Imprint Code**	**S;1000**

RLD:

500 mg

Color	**ORANGE (MEDIUM ORANGE)**	**Score**	**no score**
Shape	**OVAL (OVAL)**	**Size**	**17mm**
Flavor		**Imprint Code**	**A;500**

1000 mg

Color	**ORANGE (MEDIUM ORANGE)**	**Score**	**no score**
Shape	**OVAL (OVAL)**	**Size**	**19mm**
Flavor		**Imprint Code**	**A;750**

13. **FIRMS Response to labeling deficiencies:**

In the amendment dated 3/21/2014, the firm used the telephone number and the contact number for Caraco in the HIGHLIGHTS section "To report SUSPECTED ADVERSE REACTIONS, contact CARACO…"

Note that for the final inserts for 79020 and 90931: Sun had the telephone number for Caraco as the contact number for the AR section.

Labeling comment:
b. HIGHLIGHTS, ADVERSE EVENTS – Please revise the statement "To report SUSPECTED ADVERSE REACTIONS…" to include the manufacturer's name and phone number to be in accord with 21 CFR 201.57(a)(11)(ii).

Revised October 2013

Response:
b. In the HIGHLIGHTS, ADVERSE REACTIONS, the company name and phone number have been added in the statement as follows:
To report SUSPECTED ADVERSE REACTIONS, contact CARACO Pharmaceutical Laboratories Ltd. at 1-800-818-4555 or FDA at 1-800-FDA-1088 or www.fda.gov/medwatch.

14. **AMENDMENT dated 3/21/2014**

Labeling comment:

c. 12.3 Pharmacokinetics, Absorption
Upon further review, please revise the second paragraph to read as follows.
"Single-dose bioavailability studies have demonstrated that the 500 mg and 1000 mg tablet strengths are dosage form equivalent but the 500 mg and 750 mg tablet strengths are not dosage form equivalent."

Under section 12.3 Pharmacokinetics, Absorption: The firm revised the second paragraph to be the same as the reference listed drug and it read as follows:

Single-dose bioavailability studies have demonstrated that the 500 mg and 1000 mg tablet strengths are dosage form equivalent but the 500 mg and 750 mg tablet strengths are not dosage form equivalent.

The information in the emails below supports the decision for the firm to follow the RLD in section 12.3 of the insert labeling.

The firm revised the insert in section 12.3 as request by labeling reviewer in an email correspondence dated 7/20/11 to read (b) (4) This is in the 12.3 Pharmacokinetics, Absorption section.

From:
Sent: Friday, December 21, 2012 1:03 PM
To:
Subject: FW: Question on niacin ER Tab

The firm was asked to revise to (b) (4) However, per Agency's email, firm did not really need to revise. Sun decided to revise anyway per my instructions. At this point in time, we could approve with the statement as it stands but firm could revise back to the original statement post approval.

From:
Sent: Friday, January 13, 2012 7:35 AM
To:
Subject: RE: Question on niacin ER Tab

If the firm has this statement:

Revised October 2013

"Single-dose bioavailability studies have demonstrated that the 500 mg and 1000 mg tablet strengths are
dosage form equivalent but the 500 mg and 750 mg tablet strengths are not dosage form equivalent

Then, it's acceptable. Don't ask the firm to revise to (b) (4)

Most firms would have the first statement b/c that statement follows the RLD. Hope this clears it up.

From:
Sent: Thursday, January 12, 2012 3:52 PM
To:
Subject: RE: Question on niacin ER Tab

So, just to be clear - I don't have to ask any firms to add the sentence "in their labeling?

I read the other email you sent, but I am a little confused still.

From:
Sent: Thursday, January 12, 2012 3:38 PM
To:
Subject: RE: Question on niacin ER Tab

Don't worry about the statement. There's a guidance from the Bio group that chemistry wasn't aware of. I'll forward you the email.

Labeling comments determined on 12/20/2012 based on your submission dated 5/8/2012:

1. GENERAL COMMENT
   Please note this product is the subject of a USP monograph. We encourage you to add "USP" to your established name in the container and insert labeling.

2. CONTAINER
   Please note that the RLD uses the following colors for their product; 500 mg (blue); 750 mg (orange) and 1000 mg (green). We notice that you proposed the following colors for your product; (b) (4)

3. INSERT
   a. We encourage you to add "USP" in the Title, Dosage and Administration, Description and How Supplied sections.
   b. HIGHLIGHTS, ADVERSE EVENTS – Please revise the statement "To report SUSPECTED ADVERSE REACTIONS…" to include the manufacturer's name and phone number to be in accord with 21 CFR 201.57(a)(11)(ii).

   c. 12.3 Pharmacokinetics, Absorption

Upon further review, please revise the second paragraph to read as follows.

"Single-dose bioavailability studies have demonstrated that the 500 mg and 1000 mg tablet strengths are dosage form equivalent but the 500 mg and 750 mg tablet strengths are not dosage form equivalent."

The above post approval comments will be email to the firm to Robert Kurkiewicz at Robert.Kurkiewicz@sunpharmausa.com.

NOTES/QUESTIONS TO THE CHEMIST/BIO REVIEWER/MICRO REVIEWER:

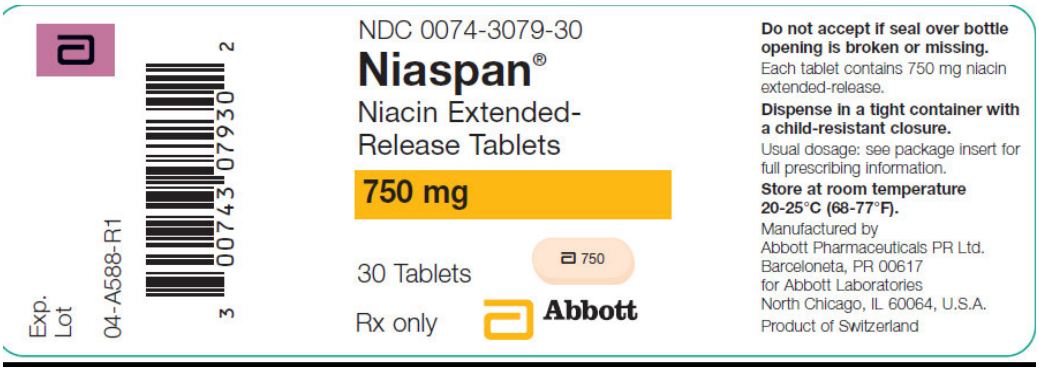
FOR THE RECORD: Please note the previous review cycles were completed by labeling reviewer Thuyanh Vu. Portions of this review were taken from the review dated 11/30/2011 in DARRTS.

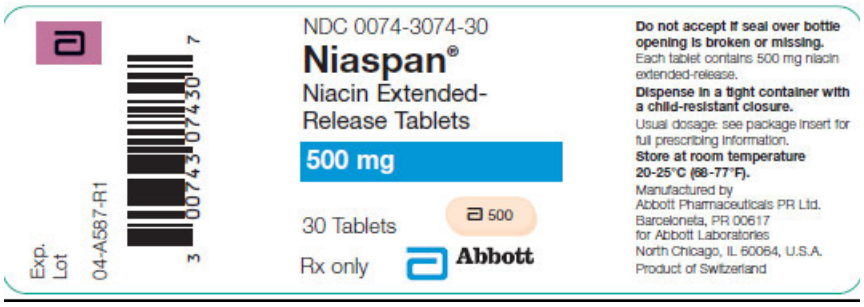
1. **MODEL LABELING**
   This review was based on the labeling Niaspan™ (niacin extended-release) Tablet (NDA 020381/S-043), approved 11/9/2010. S-043 provides for a PPI and also removes the "Fredrickson Type" descriptions of the various dyslipidemias.

   The S-042 provided for the addition of "burning sensation/skin burning sensation" in the postmarketing adverse event section.

   The S-032 approved 5/29/08 provided for changes in the labels.

   Note that tables 14 and 15 of S-042, last column (ApoB) the numbers are positive, when they should be negative per S-039 and S-041. I sent an FYI email to Kati Johnson (OND PM).





2. **USP-35:** (checked December 19, 2012)
   Niacin Extended-Release Tablets
   Packaging and Storage: Preserve in tight containers.
   - **USP Reference Standards** 〈11〉

   PF: (checked December 19, 2012)
   37(4) In-Process Revision: Niacin Extended-Release Tablets

U-1143 REDUCTION IN RISK OF RECURRENT NONFATAL MYOCARDIAL INFARCTION BY DOSING ONCE PER DAY IN THE EVENING OR A T NIGHT, WITH PRETREATMENT WITH A FLUSH INHIBITIN AGENT SUCH AS ASPIRIN

U-1144 REDUCTION IN ELEVATED TC AND LDL-C BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT, WITH PRETREATMENT WITH A FLUSH INHIBITIN AGENT SUCH AS ASPIRIN

U-1145 REDUCTION IN TG BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT, WITH PRETREATMENT WITH A FLUSH INHIBITING AGENT SUCH AS ASPIRIN

U-1146 REDUCTION IN TG WITH REDUCED FLUSHING BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT

U-1147 TREATMENT OF PRIMARY AND MIXED DYSLIPIDEMIA BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT, THROUGH REDUCTION OF LDL-C, TC, TG, LP(A), AND INCREASE OF HDL-C

U-1148 REDUCTION IN RISK OF RECURRENT NONFATAL MYOCARDIAL INFARCTION BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT, THROUGH REDUCTINO OF LDL- C, TC, TG, LP(A), AND INCREASE OF HDL-C

No remaining exclusivities.

In XP dated 4/27/10, Abbott sued Sun. Abbott sued Sun for patent infringement of '428 and '035 patents (Case 1:10-cv-00112-UNA filed in the U.S. District Court of Delaware). As of November 29, 2011, the case is still pending.

XP dated 1/10/2011: Sun patent cert IV for '428 and '035 patent, patent cert III for '930, '715, '967, '691, '229, '848, and '506

XP dated 9/16/2011: Sun filed patent cert IV for '428 and '035 patents, changed back to patent cert IV for '930, '715, '967, '691, '229, '848, and '506

XP dated 9/27/2011: Sun filed patent cer IV for '428 and split cert IV for '035 and viii for claims 2-5 and 11-30. To read about the claims, need to look at PTO website. Not sure if Sun could do a split for the '035 patent b/c this patent is one of the patents that is involved in the pending lawsuit. Furthermore, OGD could only acknowledge use codes that are in the electronic OB. Unfortunately, the firm "carved out" the use in combination with simvastatin or lovastatin (the claims 2-5 and 11-30 pertain to simvastatin and lovastatin use combination with niacin).

XP dated 12/20/2011: Sun filed a P IV certification for 6080428 patent.
SUN PHARMA GLOBAL FZE hereby certifies that, in its opinion and to the best of its knowledge, U.S. Patent No. 6,080,428 which as per the expiration date listed in the Orange Book for this patent will expire on May 27, 2017 is *invalid, unenforceable or will not be infringed* by the manufacture, use or sale of SUN PHARMA GLOBAL FZE's Niacin Extended-Release Tablets, 500 mg, 1000 mg.

4. **INACTIVE INGREDIENTS [2.3.P.1-original submission]**
The description of the inactive ingredients in the insert labeling appears accurate according to the composition statement.

The inactive ingredients are: hypromellose, hydrogenated vegetable oil Type I, glyceryl behenate, colloidal silicon dioxide, magnesium stearate, polyvinyl alcohol-partially hydrolyzed, titanium dioxide, polyethylene glycol, talc, iron oxide red and iron oxide yellow.

(b) (4)

5. **MANUFACTURING FACILITY [2.3.P.3 original submission]**
Sun Pharmaceutical Industries- Dadra
Survey No. 259/15,
Dadra-396 191
UT of Dadra & Nagar Haveli,
India

6. **FINISHED PRODUCT DESCRIPTION**
The tablet debossing has been accurately described in the HOW SUPPLIED section as required by 21 CFR 206,et al. (Imprinting of Solid Oral Dosage Form Products for Human Use; Final Rule, effective 9/13/95). YES [2.3.P.1-original submission]

RLD: Unscored, medium orange, film-coated, capsuleshaped tablets containing 500, 750 or 1000mg of niacin in an extended-release formulation. Tablets are debossed KOS on one side and the tablet strength (500, 750 or 1000) on the other side

ANDA:
500 mg: unscored, pink colored, capsule shaped, film coated tablets with "500" debossed on one side and "S" on other side.

1000 mg: unscored, pink colored, capsule shaped, film coated tablets with "1000" debossed on one side and "S" on other side.

7. **STORAGE STATEMENT AND DISPENSING RECOMMENDATIONS**

RLD: Store at room temperature (20 to 25°C or 68 to 77°F).
Dispense in a tight container with child-resistant closure.

ANDA: Store at 20° to 25°C (68° to 77°F); excursions permitted to 15°and 30°C (59° and 86°F). [see USP Controlled Room Temperature]. Dispense in a tight container with child-resistant closure.

8. **PRODUCT LINE**

RLD: bottle of 100s

ANDA: both strengths: 30s, 90s, 100s and 1000s

9. **CONTAINER/CLOSURE**

Module 3.2.P.7.

Strength	Count	Packaging component		(b) (4)
		White round HDPE Bottles	Polypropylene closures	
500 mg	30's	60 cc	33 mm CRC	
	100's	120 cc	38 mm CRC	
	100's	120 cc	38 mm NCRC	
	1000's	950 cc	53 mm NCRC	
1000 mg	30's	75 cc	33 mm CRC

	100's	300 cc	53 mm NCRC	
	1000's	1500 cc	89 mm NCRC	

CRC : Child resistant closure
NCRC : Non Child resistant closure

In AF dated 4/20/10, firm added 90s count size.

- Additional count of 90's is also proposed for all three strengths. Packaging configuration for this count is given below:

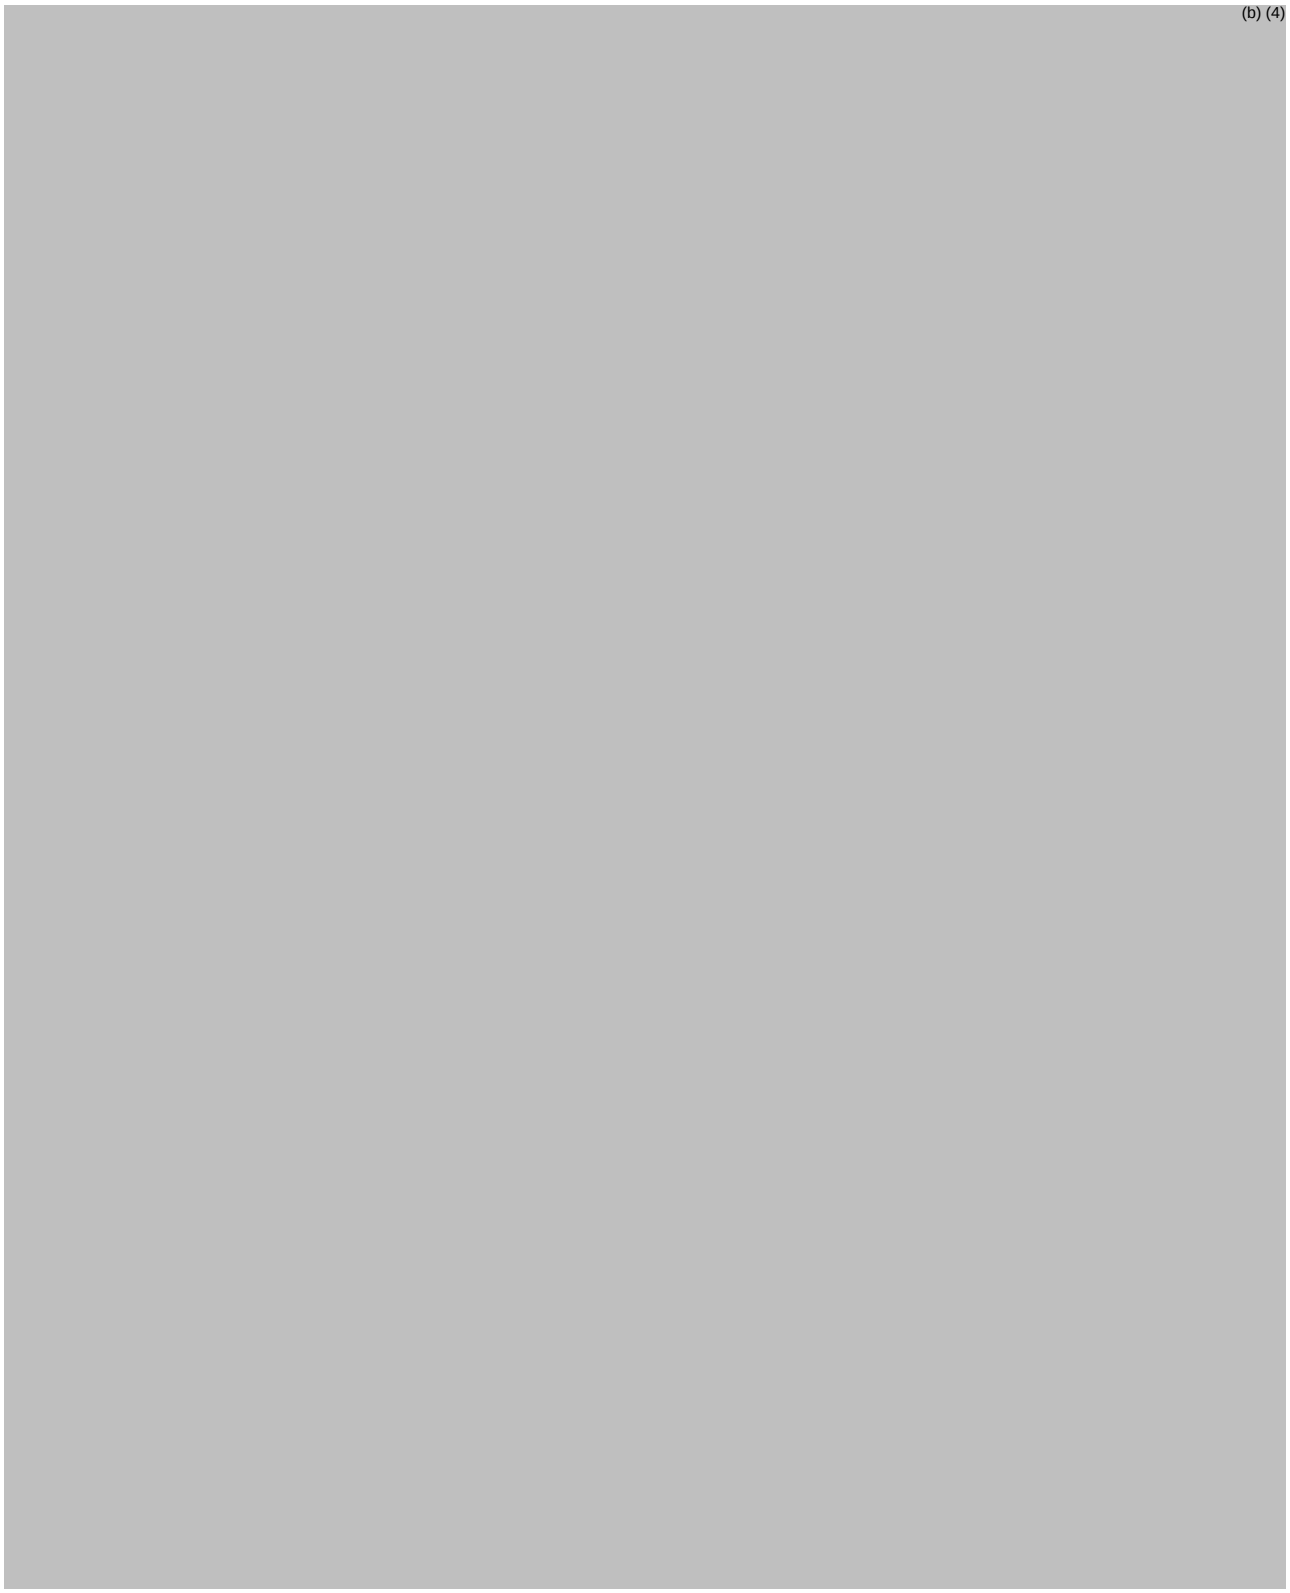
Counts	*Strength*	*Bottle Size*	*Cap Size*	(b) (4)
90's CRC	500 mg	120 cc	38 mm	
	1000 mg	300 cc	53 mm	
Supplier Name		(b) (4)		

10. **BIOAVAILABILITY/BIOEQUIVALENCE**

Bio results adequate as of review dated 10/17/2011.
The dissolution testing on all strengths using the FDA-recommended method was previously found acceptable.

11. **RELATED APPLICATIONS:**

This review- ANDA 200484 Niacin Extended-release Tablets (Pending)



12. **SPL DATA ELEMENTS**
Acceptable 9/29/2009

13. FIRMS Response to labeling Amendment;

In AF dated 5/8/12, the firm provided the following response to labeling comments dated 11/30/11.

PACKAGE INSERT
You may not "carve out" the indication "in combination with simvastatin and lovastatin ... ". According to the electronic Orange Book, the '035 patent does not have the use code associated with this indication. You may only fIle a "viii" to the use codes listed in the Orange Book. Please contact the Regulatory Support Staff for further information about patent certifications.

Please revise your labeling accordingly.

Response-2
Please note that information related to use of proposed drug product in combination therapy with simvastatin or lovastatin for the treatment of primary hyperlipidemia and mixed dyslipidemia has been added in Sun's labeling. The Patent Amendment had already been submitted to FDA dated 20 December, 2011 for changing the sec VIII to Para IV for OB Patent 6469035.

14. In the submission dated 11/21/2011, the firm revised the insert in section 12.3 as request by labeling reviewer in an email correspondence dated 7/20/11 to read (b) (4) [redacted]. This is in the 12.3 Pharmacokinetics, Absorption section.

Based on the emails below the position of the office regarding the statement above is clarified. The firm will be asked to revise the 12.3 Pharmacokinetics, Absorption section of the insert labeling post approval.

REVIEW OF PROFESSIONAL LABELING
DIVISION OF LABELING AND PROGRAM SUPPORT
LABELING REVIEW BRANCH

ANDA Number: 200484 Date of Submission: November 21, 2011

Applicant's Name: Sun Pharma Global FZE

Established Name: Niacin Extended-Release Tablets 500 mg and 1000 mg

---

Labeling Deficiencies:

1. **CONTAINER** (30s, 90s, 100s and 1000s)

   We encourage you to add “Pharmacist: dispense with patient package insert” to the principal display panel.

2. **PACKAGE INSERT**

   You may not “carve out” the indication “In combination with simvastatin and lovastatin...”. According to the electronic Orange Book, the ‘035 patent does not have the use code associated with this indication. You may only file a “viii” to the use codes listed in the Orange Book. Please contact the Regulatory Support Staff for further information about patent certifications.

   Please revise your labeling accordingly.

Submit labels and labeling electronically.

Prior to approval, it may be necessary to revise your labeling subsequent to approved changes for the reference listed drug. In order to keep ANDA labeling current, we suggest that you subscribe to the daily or weekly updates of new documents posted on the CDER web site at the following address - http://service.govdelivery.com/service/subscribe.html?code=USFDA_17

To facilitate review of your next submission please provide a side-by-side comparison of your proposed labeling with the last labeling submission with all differences annotated and explained.

APPROVAL SUMMARY (List the package size, strength(s), and date of submission for approval):
Do you have 12 Final Printed Labels and Labeling? No

Container Labels (30s, 90s, 100s, and 1000s): Final Printed Labels submitted in e-submission 4/20/10

Professional Package Insert Labeling: Not acceptable.

SPL: DLDE is acceptable in 9/29/09 e-submission

Revisions needed post-approval: Make sure the 750 mg stength and 90s count are reflected in the DLDE

section of the SPL

BASIS OF APPROVAL:
Was this approval based upon a petition? No
What is the RLD on the 356(h) form: Niaspan
NDA Number: 20-381
NDA Drug Name: Niacor (Niacin Tablets)
NDA Firm: Upsher Smith
Date of Approval of NDA Insert and supplement #: S-042, approved 2/24/10
Has this been verified by the MIS system for the NDA? Yes
Was this approval based upon an OGD labeling guidance? No
Basis of Approval for the Container Labels: side-by-sides
Other Comments

NOTE TO CHEMIST:

FOR THE RECORD:

1. MODEL LABELING - This review was based on the labeling Niaspan (20-381/S-043, approved 11/9/2010) S-043 provides for a PPI and also removes the "Fredrickson Type" descriptions of the various dyslipidemias . The S-042 provided for the addition of "burning sensation/skin burning sensation" in the postmarketing adverse event section. The S-032 approved 5/29/08 provided for changes in the labels

   Note that tables 14 and 15 of S-042, last column (ApoB) the numbers are positive, when they should be negative per S-039 and S-041. I sent an FYI email to Kati Johnson (OND PM).

   This ANDA shared the same insert as the sister application ANDA 201273 (750 mg).

2. PATENTS/EXCLUSIVITIES: for 20-381

Firm submitted cert IV to all patents in original submission.

Code	Definition
U-331	METHOD OF TREATING HYPERLIPIDEMIA WITH NICOTINIC ACID BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT
U-450	INTERMEDIATE REL NICOTINIC ACID FORMULATIONS HAVING UNIQUE URINARY METAB PROFILES RESULTING FROM ABSORPTION PROFILES OF NICOTINIC ACID FROM THE INTERMEDIATE NICOTINIC ACID FORMULATIONS,SUITABLE FOR TX HYPERLIPIDEMIA FOLLOWING QD DOSING
U-354	METHOD OF TREATING HYPERLIPIDEMIA WITH NICOTINIC ACID WITHOUT CAUSING TREATMENT-LIMITING ELEVATIONS IN URIC ACID OR GLUCOSE LEVELS OR CAUSING LIVER DAMAGE, BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT
U-768	A METHOD OF REDUCING THE CAPACITY OF EXTENDED RELEASE NICOTINIC

ACID TO PROVOKE A FLUSHING REACTION BY PRETREATING AN INDIVIDUAL WITH A FLUSH INHIBITING AGENT PRIOR TO THE ADMINISTRATION OF THE EXTENDED RELEASE NICOTINIC ACID

U-548 A METHOD OF REDUCING FLUSH IN AN INDIVIDUAL BEING TREATED FOR A LIPIDEMIC DISORDER AND EFFECTIVELY TREATING THE LIPIDEMIC DISORDER

U-586 AN INTERMEDIATE RELEASE NICOTINIC ACID FORMULATION SUITABLE FOR ORAL ADMINISTRATION ONCE-A-DAY AS A SINGLE DOSE FOR TREATING HYPERLIPIDEMIA WITHOUT CAUSING DRUG-INDUCED HEPATOTOXICITY OR ELEVATIONS IN URIC ACID OR GLUCOSE OR BOTH

U-712 A METHOD OF USING A NICOTINIC ACID FORMULATION TO REDUCE ELEVATED TC, LDL-C AND TG LEVELS, AND RAISE HDL-C LEVELS IN PATIENTS WITH HYPERLIPIDEMIA

U-1138 TREATMENT OF PRIMARY AND MIXED DYSLIPIDEMIA BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT

U-1139 REDUCTION IN RISK OF RECURRENT NONFATAL MYOCARDIAL INFARCTION BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT

U-1140 REDUCTION IN ELEVATED TC AND LDL-C BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT

U-1141 REDUCTION IN TG BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT

U-1142 TREATMENT OF PRIMARY AND MIXED DYSLIPIDEMIA BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT WITH PRETREATMENT WITH A FLUSH INHIBITING AGENT SUCH AS ASPIRIN

U-1143 REDUCTION IN RISK OF RECURRENT NONFATAL MYOCARDIAL INFARCTION BY DOSING ONCE PER DAY IN THE EVENING OR A T NIGHT, WITH PRETREATMENT WITH A FLUSH INHIBITIN AGENT SUCH AS ASPIRIN

U-1144 REDUCTION IN ELEVATED TC AND LDL-C BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT, WITH PRETREATMENT WITH A FLUSH INHIBITIN AGENT SUCH AS ASPIRIN

U-1145 REDUCTION IN TG BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT, WITH PRETREATMENT WITH A FLUSH INHIBITING AGENT SUCH AS ASPIRIN

U-1146 REDUCTION IN TG WITH REDUCED FLUSHING BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT

U-1147 TREATMENT OF PRIMARY AND MIXED DYSLIPIDEMIA BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT, THROUGH REDUCTION OF LDL-C, TC, TG, LP(A), AND INCREASE OF HDL-C

U-1148 REDUCTION IN RISK OF RECURRENT NONFATAL MYOCARDIAL INFARCTION BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT, THROUGH REDUCTINO OF LDL-C, TC, TG, LP(A), AND INCREASE OF HDL-C

No remaining exclusivities.

In XP dated 4/27/10, Abbott sued Sun. Abbott sued Sun for patent infringement of '428 and '035 patents (Case 1:10-cv-00112-UNA filed in the U.S. District Court of Delaware). As of November 29, 2011, the case is still pending.

XP dated 1/10/2011: Sun patent cert IV for '428 and '035 patent, patent cert III for '930, '715, '967, '691, '229, '848, and '506

XP dated 9/16/2011: Sun filed patent cert IV for '428 and '035 patents, changed back to patent cert IV for '930, '715, '967, '691, '229, '848, and '506

XP dated 9/27/2011: Sun filed patent cer IV for '428 and split cert IV for '035 and viii for claims 2-5 and 11-30. To read about the claims, need to look at PTO website. Not sure if Sun could do a split for the '035 patent b/c this patent is one of the patents that is involved in the pending lawsuit. Furthermore, OGD could only acknowledge use codes that are in the electronic OB. Unfortunately, the firm "carved out" the use in combination with simvastatin or lovastatin (the claims 2-5 and 11-30 pertain to simvastatin and lovastatin use combination with niacin).

3. INACTIVE INGREDIENTS [2.3.P.1-original submission]

The description of the inactive ingredients in the insert labeling appears accurate according to the composition statement.

The inactive ingredients are: hypromellose, hydrogenated vegetable oil Type I, glyceryl behenate, colloidal silicon dioxide, magnesium stearate, polyvinyl alcohol-partially hydrolyzed, titanium dioxide, polyethylene glycol, talc, iron oxide red and iron oxide yellow.

(b) (4)

4. MANUFACTURING FACILITY OF FINISHED DOSAGE [2.3.P.3 original submission]

   Sun Pharmaceutical Industries- Dadra
   Survey No. 259/15,
   Dadra- 396 191,
   UT of Dadra & Nagar Haveli,
   India.

5. The tablet debossing has been accurately described in the HOW SUPPLIED section as required by 21 CFR 206,et al. (Imprinting of Solid Oral Dosage Form Products for Human Use; Final Rule, effective 9/13/95). YES [2.3.P.1-original submission]

   NDA: Unscored, medium orange, film-coated, capsuleshaped tablets containing 500, 750 or 1000mg of niacin in an extended-release formulation. Tablets are debossed KOS on one side and the tablet strength (500, 750 or 1000) on the other side.

   ANDA:

   500 mg: pink colored, capsule shaped, film coated tablets with “500” debossed on one side and “S” on othe side.

   1000 mg: pink colored, capsule shaped, film coated tablets with “1000” debossed on one side and “S” on othe side.

6. CONTAINER/CLOSURE [3.2.P.7-original submission]

Module 3.2.P.7.

Strength	Count	Packaging component		(b) (4)
		White round HDPE Bottles	Polypropylene closures	
500 mg	30's	60 cc	33 mm CRC	
	100's	120 cc	38 mm CRC	
	100's	120 cc	38 mm NCRC	
	1000's	950 cc	53 mm NCRC	
1000 mg	30's	75 cc	33 mm CRC	
	100's	300 cc	53 mm CRC	
	100's	300 cc	53 mm NCRC	
	1000's	1500 cc	89 mm NCRC	

CRC : Child resistant closure
NCRC : Non Child resistant closure

In AF dated 4/20/10, firm added 90s count size.

- Additional count of 90's is also proposed for all three strengths. Packaging configuration for this count is given below:

Counts	*Strength*	*Bottle Size*	*Cap Size*	(b) (4)
90's CRC	500 mg	120 cc	38 mm	
	1000 mg	300 cc	53 mm	
Supplier Name		(b) (4)		

7. PACKAGING CONFIGURATIONS

RLD: bottle of 100s

ANDA: both strengths: 30s, 90s, 100s, and 1000s.

8. STORAGE TEMPERATURE RECOMMENDATIONS COMPARISON

RLD: Store at room temperature (20 to 25°C or 68 to 77°F).

ANDA: Store at 20° to 25°C (68° to 77°F); excursions permitted to 15°and 30°C (59° and 86°F). [see USP Controlled Room Temperature].

9. DISPENSING STATEMENTS COMPARISON

USP: Preserve in well-closed containers [the extended release tablet is NOT USP, only the regular release one]. Checked PF on October 15, 2010 and there I did not find any information relating to niacin extended release tablet.

RLD: Dispense in a tight container with child-resistant closure.

ANDA: Dispense in a tight container with child-resistant closure.

10. BIOAVAILABILITY/BIOEQUIVALENCE: Bio pending as of October 15, 2010.

11. Scoring:

NDA – not scored
ANDA – not scored

12. In this submission firm revised: to [redacted] (b) (4) This is in the 12.3 Pharmacokinetics, Absorption section.

REVIEW OF PROFESSIONAL LABELING
DIVISION OF LABELING AND PROGRAM SUPPORT
LABELING REVIEW BRANCH

ANDA Number: 200-484 Date of Submission: September 29, 2009

Applicant's Name: Sun Pharma Global FZE

Established Name: Niacin Extended-Release Tablets 500 mg and 1000 mg

---

Labeling Deficiencies:

1. **CONTAINER** (30s, 100s and 1000s)

(b) (4)

2. **PACKAGE INSERT**

   a. GENERAL COMMENT

      Please note that the established name is "niacin extended release". There are many instances in the insert that you replaced "Niaspan" with "niacin" instead of "niacin extended release". This is especially glaring in the section 14.4 where the insert specified a combination tablet of niacin extended release and simvastatin. Please revise accordingly.

   b. HIGHLIGHTS, ADVERSE REACTIONS:

      We note that you did not state your contact number for patients to report adverse reactions. Please provide your contact number.

   c. 6.1 Clinical Studies Experience

      Second paragraph, second sentence, add "burning sensation/skin burning sensation" between "sweating" and "chills".

   d. 6.2 Postmarketing Experience

      Third paragraph, add "burning sensation/skin burning sensation" between "sweating" and "skin discoloration"

Submit labels and labeling electronically according to the guidance for industry titled Providing Regulatory Submissions in Electronic Format – ANDA.

Prior to approval, it may be necessary to revise your labeling subsequent to approved changes for the reference listed drug. In order to keep ANDA labeling current, we suggest that you subscribe to the daily or weekly updates of new documents posted on the CDER web site at the following address - http://service.govdelivery.com/service/subscribe.html?code=USFDA_17

To facilitate review of your next submission please provide a side-by-side comparison of your proposed labeling with the last labeling submission with all differences annotated and explained.

NOTE TO CHEMIST:

FOR THE RECORD:

1. MODEL LABELING - This review was based on the labeling Niaspan (20-381/S-042, approved 2/24/2010. The s-042 provided for the addition of "burning sensation/skin burning sensation" in the postmarketing adverse event section. The S-032 approved 5/29/08 provided for changes in the labels

   Note that tables 14 and 15 of S-042, last column (ApoB) the numbers are positive, when they should be negative per S-039 and S-041. I sent an FYI email to Kati Johnson (OND PM).

2. PATENTS/EXCLUSIVITIES: for 20-381

Patent Data

Patent No	Patent Expiration	Firm Filed	Patent Use Code	Impact on Labeling

Firm submitted cert IV to all patents in original submission.

Code	Definition
U-331	METHOD OF TREATING HYPERLIPIDEMIA WITH NICOTINIC ACID BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT
U-450	INTERMEDIATE REL NICOTINIC ACID FORMULATIONS HAVING UNIQUE URINARY METAB PROFILES RESULTING FROM ABSORPTION PROFILES OF NICOTINIC ACID FROM THE INTERMEDIATE NICOTINIC ACID FORMULATIONS,SUITABLE FOR TX HYPERLIPIDEMIA FOLLOWING QD DOSING
U-354	METHOD OF TREATING HYPERLIPIDEMIA WITH NICOTINIC ACID WITHOUT CAUSING TREATMENT-LIMITING ELEVATIONS IN URIC ACID OR GLUCOSE LEVELS OR CAUSING LIVER DAMAGE, BY DOSING ONCE PER DAY IN THE EVENING OR AT NIGHT

U-768 A METHOD OF REDUCING THE CAPACITY OF EXTENDED RELEASE NICOTINIC ACID TO PROVOKE A FLUSHING REACTION BY PRETREATING AN INDIVIDUAL WITH A FLUSH INHIBITING AGENT PRIOR TO THE ADMINISTRATION OF THE EXTENDED RELEASE NICOTINIC ACID

U-548 A METHOD OF REDUCING FLUSH IN AN INDIVIDUAL BEING TREATED FOR A LIPIDEMIC DISORDER AND EFFECTIVELY TREATING THE LIPIDEMIC DISORDER

U-586 AN INTERMEDIATE RELEASE NICOTINIC ACID FORMULATION SUITABLE FOR ORAL ADMINISTRATION ONCE-A-DAY AS A SINGLE DOSE FOR TREATING HYPERLIPIDEMIA WITHOUT CAUSING DRUG-INDUCED HEPATOTOXICITY OR ELEVATIONS IN URIC ACID OR GLUCOSE OR BOTH

U-712 A METHOD OF USING A NICOTINIC ACID FORMULATION TO REDUCE ELEVATED TC, LDL-C AND TG LEVELS, AND RAISE HDL-C LEVELS IN PATIENTS WITH HYPERLIPIDEMIA

No remaining exclusivities.

3. INACTIVE INGREDIENTS [2.3.P.1-original submission]

The description of the inactive ingredients in the insert labeling appears accurate according to the composition statement.

The inactive ingredients are: hypromellose, hydrogenated vegetable oil Type I, glyceryl behenate, colloidal silicon dioxide, magnesium stearate, polyvinyl alcohol-partially hydrolyzed, titanium dioxide, polyethylene glycol, talc, iron oxide red and iron oxide yellow.

(b) (4)

[redacted]

4. MANUFACTURING FACILITY OF FINISHED DOSAGE [2.3.P.3 original submission]

Sun Pharmaceutical Industries- Dadra
Survey No. 259/15,
Dadra- 396 191,
UT of Dadra & Nagar Haveli,
India.

5. The tablet debossing has been accurately described in the HOW SUPPLIED section as required by 21 CFR 206,et al. (Imprinting of Solid Oral Dosage Form Products for Human Use; Final Rule, effective 9/13/95). YES [2.3.P.1-original submission]

NDA: Unscored, medium orange, film-coated, capsuleshaped tablets containing 500, 750 or 1000mg of niacin in an extended-release formulation. Tablets are debossed KOS on one side and the tablet strength (500, 750 or 1000) on the other side.

ANDA:

500 mg: pink colored, capsule shaped, film coated tablets with "500" debossed on one side and "S" on othe side.

1000 mg: pink colored, capsule shaped, film coated tablets with "1000" debossed on one side and "S" on othe side.

6. CONTAINER/CLOSURE [3.2.P.7-original submission]

Module 3.2.P.7.

Strength	Count	Packaging component		(b) (4)
		White round HDPE Bottles	Polypropylene closures	
500 mg	30's	60 cc	33 mm CRC	
	100's	120 cc	38 mm CRC	
	100's	120 cc	38 mm NCRC	
	1000's	950 cc	53 mm NCRC	
1000 mg	30's	75 cc	33 mm CRC	
	100's	300 cc	53 mm CRC	
	100's	300 cc	53 mm NCRC	
	1000's	1500 cc	89 mm NCRC	

CRC : Child resistant closure
NCRC : Non Child resistant closure

7. PACKAGING CONFIGURATIONS

RLD: bottle of 100s

ANDA: both strengths: 30s, 100s, and 1000s.

8. STORAGE TEMPERATURE RECOMMENDATIONS COMPARISON

RLD: Store at room temperature (20 to 25°C or 68 to 77°F).

ANDA: Store at 20° to 25°C (68° to 77°F); excursions permitted to 15°and 30°C (59° and 86°F). [see USP Controlled Room Temperature].

9. DISPENSING STATEMENTS COMPARISON

USP: Preserve in well-closed containers [the extended release tablet is NOT USP, only the regular release one]

RLD: Dispense in a tight container with dhild-resistant closure.

ANDA: Dispense in a tight container with dhild-resistant closure.

10. BIOAVAILABILITY/BIOEQUIVALENCE: Bio pending as of March 23, 2010.

11. Scoring:

NDA – not scored
ANDA – not scored

Addendum #1 to

ANDA 200484

Niacin Extended Release Tablets USP, 500 mg and 1000 mg

Sun Pharmaceutical Industries, Inc.

Weiqin Jiang, PhD
Office of Generic Drugs
Division of Chemistry IV

Review of Apr. 3, 2013 gratuitous amendment.

Reviewer's note: ANDA 200484CR#3 was found approvable for CMC as of 9/25/2012. API DMF (b) (4) is adequate as of 8/28/2012. GDUFA DMF (b) (4) completeness assessment checklist is provided by D. Skanchy on 1/8/2013.

This amendment is submitted with respect to TL's communication dated 22-Mar-2013 with Mr. Robert Kurkiewicz, informing Sun to submit a gratuitous amendment indicating that drug product complies with the newly official USP monograph and to demonstrate that the in-house methods for assay (b) (4) are equivalent to USP monograph method.

With this amendment, Sun's drug product now complies with current USP monograph criteria, except dissolution test. Dissolution test specifications are per DBE recommendations. Upon approval of ANDA 200484, Sun shall submit a petition to USP for inclusion of Sun's dissolution method in the monograph.

The labeling reviewer has informed the applicant to include the word "USP" in the label as the monograph is now official. This may be done post-approval.

An equivalency report of current in-house assay, dissolution (b) (4) method with USP monograph methods are provided. The USP methods are adopted for assay (b) (4) (b) (4) since Dec. 01, 2012.

For Dissolution test, Sun's in-house validated method shall be used.

(b) (4)

Proprietary Name: N/A

Non-Proprietary Name (USAN): Niacin Extended-release tablets, 500 mg and 1000 mg

9. LEGAL BASIS FOR SUBMISSION:

RLD, Niaspan® Tablets, in NDA 20381 manufactured by Abbott Laboratories approved on Jul 28, 1997, Niacin extended release for oral tablet, 500 mg, 750 mg and 1 g.

Patent Certification (314.94(a)(12)): Pursuant to 21 USC 355(J)(2)(A)(vii), Sun's statement of Certification, for all patents which claim the RLD Niaspan® (niacin extended-release tablets), referred to in this application or which claim a use of the listed drug have been provided in this section.

Statement of Exclusivity (314.94(a)(3):

Pursuant to 21CFR314.94(a)(3)(ii), Sun certified that according to the information published in the list, the reference listed drug NIASPAN® (niacin extended-release tablets) referred to in this application is not entitled for marketing exclusivity under section 505(j)(4)(D) and 505(c)(3)(D)(II) of the Federal Food, Drug and Cosmetic Act.

The applicant filed a paragraph IV patent certification. In XP dated 4/27/10, Abbott sued Sun for patent infringement of '428 and '035 patents (Case 1:10-cv-00112-UNA filed in the U.S. District Court of Delaware).

Patents listed for the RLD in the electronic Orange Book Approved Drug Products with Therapeutic Equivalence Evaluations are as follows:

Patent No	Patent Expiration
6080428	May 27, 2017
6129930	September 20, 2013

Chemistry Review Data Sheet

The Executive Summary

I. Recommendations

A. Recommendation and Conclusion on Approvability

Approvable

B. Recommendation on Phase 4 (Post-Marketing) Commitments, Agreements, and/or Risk Management Steps, if Approvable N/A

II. Summary of Chemistry Assessments

A. Description of the Drug Product(s) and Drug Substance(s)

RLD is NIASPAN® (niacin extended-release tablets), 500 mg, and 1000 mg; NDA # 020381 manufactured by Abbott Laboratories, approved on July 28, 1997.

USP status: DS is USP and EP compendial. DS meets USP monograph. There is an official Niacin Tablet USP monograph for the IR product, but not for the extended release product. There is currently a proposed monograph for extended release tablets in PF 37(4). This will become official in USP 35 supplement 2 on 12/1/2012.

Drug Substance: API is Niacin, USP, supplied by (b) (4). It is called nicotinic acid, or 3-pyridinecarboxylic acid. Niacin is "White crystals or crystalline powder, is odorless, or has a slight odor. Melts at about 235 ºC, freely soluble in boiling water, in boiling alcohol, and in solutions of alkali hydroxides and carbonates; sparingly soluble in water; practically insoluble in ether"-quoted from USP. (b) (4)

Drug Product: It is an Extended-Release tablets (ER), matrix controlled, oral, solid dosage form and proposed in strengths 500 mg and 1000 mg. Inactive ingredients: Hypropmellose, Hydrogenated vegetable oil Type I, Glyceryl behenate, Colloidal silicon dioxide, Magnesium stearate and (b) (4) Pink, (b) (4) Polyvinyl alcohol-partially hydrolyzed, Titanium dioxide, Polyethylene glycol, Talc, Iron oxide red, Iron oxide yellow.

DP and Strength: It is an ER, matrix-controlled, oral, solid dosage form and in strengths 500 mg and 1000 mg.

DP Manufacturing Process: The DP is manufactured by (b) (4)

Chemistry Review Data Sheet

Indication and Packaging: Indicated for lipid regulation and thus appropriately packaged in 30's CRC, 100's CRC, 100's NCRC and 1000's NCRC in HPDE bottles.

Storage: Store at 20° to 25°C (68° to 77°F); excursions permitted between 15° and 30°C (59° and 86°F) [see USP Controlled Room Temperature].

Expiration: The proposed expiration dating period is 24 months, which is supported by 3-month ACC stability data and 24-month CRT stability data (5/12/12 AM).

C. Description of How the Drug Product is intended to be used

Proposed Indication: Indicated to reduce elevated TC, LDL-C, Apo B and TG levels, and to increase HDL-C in patients with primary hyperlipidemia (b) (4) (b) (4) and mixed dyslipidemia (b) (4)

For the treatment of primary hyperlipidemia (b) (4) and mixed dyslipidemia (b) (4) in combination with simvastatin or lovastatin.

To reduce the risk of recurrent nonfatal myocardial infarction.

To slow progression or promote regression of atherosclerotic disease & to reduce elevated TC and LDL-C levels in adult patients with primary hyperlipidemia (b) (4) in combination with a bile acid binding resin.

(b) (4) for treatment of adult patients with severe hypertriglyceridemia (b) (4)

Dose and Packaging: Four configurations are used. See above. Administration: There is no special instruction for administration since the DP is designed for oral administration and needs to be swallowed as is. The MDD is 2000 mg.

Thresholds for Impurities:

ICH	IT	QT
Q3A	(b) (4)	
Q3B		

D. Basis for Approvability or Not-Approval Recommendation

The application is approvable.

Following this page, 46 Pages Withheld in Full as (b)(4)

(b) (4)

[redacted]

A APPENDICES: N/A

R REGIONAL INFORMATION-

R.1	**Executed Batch Records**	Provided and Adequate
R.2	**Comparability Protocols:**	None
R.3	**Methods Validation Package**	Provided

II. Review Of Common Technical Document-Quality (Ctd-Q) Module 1

A. Labeling & Package Insert

The firm provided in label: chemical structure, chemical name, description, ingredients and CCS; which are the same as what are in CMC.

The solubility for RLD and ANDA are slightly different. The comparison follows.

RLD "very soluble in water",
ANDA 200484 "sparingly soluble in water"

(b) (4)

[redacted]

The generic sponsor's description as sparingly soluble is accurate based on ANDA data.

Conclusion: Label part related to CMC is adequate.

B. Environmental Assessment Or Claim Of Categorical Exclusion Provided

8. DRUG PRODUCT NAME/CODE/TYPE:

Proprietary Name: N/A

Non-Proprietary Name (USAN): Niacin Extended-release tablets, 500 mg and 1000 mg

9. LEGAL BASIS FOR SUBMISSION:

The basis for Sun's proposed ANDA for Niacin Extended-release tablets, 500 mg and 1000 mg is the approved, referenced listed drug, Niaspan® Tablets, subject of NDA 20381 manufactured by Abbott Laboratories.

a.

Patent Certification (§ 314.94(a)(12))

Pursuant to 21 U.S.C. 355(j)(2)(A)(vii), Sun Pharma Global FZE's Statement of Certification, for all patents which claim the listed drug, NIASPAN® (niacin extended-release tablets), referred to in this application or which claim a use of the listed drug have been provided in this section.

Statement of Exclusivity (§ 314.94(a)(3))

Pursuant to 21 CFR § 314.94(a)(3)(ii), Sun Pharma Global FZE hereby certifies that according to the information published in the list, the reference listed drug NIASPAN® (niacin extended-release tablets) referred to in this application is not entitled for marketing exclusivity under section 505(j)(4)(D) and 505(c)(3)(D)(ii) of the Federal Food, Drug, and Cosmetic Act.

The applicant filed a paragraph IV patent certification. In XP dated 4/27/10, Abbott sued Sun. Abbott sued Sun for patent infringement of '428 and '035 patents (Case 1:10-cv-00112-UNA filed in the U.S. District Court of Delaware).

Patents listed for the RLD in the electronic Orange Book Approved Drug Products with Therapeutic Equivalence Evaluations are as follows:

Patent No	Patent Expiration
6080428	May 27, 2017
6129930	September 20, 2013

19. ORDER OF REVIEW

The application submission(s) covered by this review was taken in the date order of receipt. __x__ Yes ____ No If no, explain reason(s) below:

Chemistry Review Data Sheet

The Executive Summary

I. Recommendations

A. Recommendation and Conclusion on Approvability

Not Approvable.

B. Recommendation on Phase 4 (Post-Marketing) Commitments, Agreements, and/or Risk Management Steps, if Approvable N/A

II. Summary of Chemistry Assessments

A. Description of the Drug Product(s) and Drug Substance(s)

The reference listed drug is NIASPAN® (niacin extended-release tablets), 500 mg, and 1000 mg. NDA # 020381 manufactured by Abbott Laboratories.

USP status: DS is USP and EP compendial. DS meets USP monograph. There is an official Niacin Tablet USP monograph for the IR product, but not for the extended release product. There is currently a proposed monograph for extended release tablets in PF 37(4).

Drug Substance: API is Niacin, USP, supplied by (b) (4) It is called nicotinic acid, or 3-pyridinecarboxylic acid. Niacin is "White crystals or crystalline powder, is odorless, or has a slight odor. Melts at about 235 °C, freely soluble in boiling water, in boiling alcohol, and in solutions of alkali hydroxides and carbonates; sparingly soluble in water; practically insoluble in ether"-quoted from USP. (b) (4)

Drug Product: It is an Extended-Release tablets (ER), matrix controlled, oral, solid dosage form and proposed in strengths 500 mg and 1000 mg. Indication and Packaging: Indicated for lipid regulation and thus appropriately packaged in 30's CRC, 100's CRC, 100's NCRC and 1000's NCRC in HPDE bottles. Inactive ingredients: Hypropmellose, Hydrogenated vegetable oil Type I, Glyceryl behenate, Colloidal silicon dioxide, Magnesium stearate and (b) (4) Pink, (b) (4) Polyvinyl alcohol-partially hydrolyzed, Titanium dioxide, Polyethylene glycol, Talc, Iron oxide red, Iron oxide yellow.

DP and Strength: It is an ER, matrix-controlled, oral, solid dosage form and in strengths 500 mg and 1000 mg.
Tablets are supplied as follows:
500 mg tablets: Bottles of 30's and 100's with Child Resistant Cap; Bottles of 100's and 1000's with Non Child Resistant Cap
1000 mg tablets: Bottles of 30's and 100's with Child Resistant Cap; Bottles of 100's and 1000's with Non Child Resistant Cap

Storage: Store at 20° to 25°C (68° to 77°F); excursions permitted between 15° and 30°C (59° and 86°F) [see USP Controlled Room Temperature].

Dispense in a tight container with child-resistant closure.

Expiration: The proposed expiration dating period is 24 months, which is supported by 3-month ACC stability data and18-month CRT stability data.

DP Manufacturing Process: The DP is manufactured by (b) (4)

B. Description of How the Drug Product is intended to be used

Dose and Packaging: Four configurations are used. See above. Administration: There is no special instruction for administration since the DP is designed for oral administration and needs to be swallowed as is. Thresholds for Impurities: The MDD is 2000 mg. The IT and QT for impurities in DS is (b) (4) respectively. The IT and QT for the degradative products in DP is (b) (4) respectively.

C. Basis for Approvability or Not-Approval Recommendation

The application is not approvable.

III. Administrative

TYPE OF LETTER: Deficiency Minor

9. LEGAL BASIS FOR SUBMISSION:

Chemistry Review Data Sheet

The basis for Sun's proposed ANDA for Niacin Extended-release tablets, 500 mg and 1000 mg is the approved, referenced listed drug, Niaspan® Tablets, subject of NDA 20381 manufactured by Abbott Laboratories.

a.

Patent Certification (§ 314.94(a)(12))

Pursuant to 21 U.S.C. 355(j)(2)(A)(vii), Sun Pharma Global FZE's Statement of Certification, for all patents which claim the listed drug, NIASPAN® (niacin extended-release tablets), referred to in this application or which claim a use of the listed drug have been provided in this section.

Statement of Exclusivity (§ 314.94(a)(3))

Pursuant to 21 CFR § 314.94(a)(3)(ii), Sun Pharma Global FZE hereby certifies that according to the information published in the list, the reference listed drug NIASPAN® (niacin extended-release tablets) referred to in this application is not entitled for marketing exclusivity under section 505(j)(4)(D) and 505(c)(3)(D)(ii) of the Federal Food, Drug, and Cosmetic Act.

The applicant filed a paragraph IV patent certification. In XP dated 4/27/10, Abbott sued Sun. Abbott sued Sun for patent infringement of '428 and '035 patents (Case 1:10-cv-00112-UNA filed in the U.S. District Court of Delaware).

Patents listed for the RLD in the electronic Orange Book Approved Drug Products with Therapeutic Equivalence Evaluations are as follows:

Patent No	Patent Expiration
6080428	May 27, 2017
6129930	September 20, 2013
6406715	September 20, 2013
6469035	March 15, 2018
6676967	September 20, 2013
6746691	September 20, 2013
6818229	February 15, 2014
7011848	September 20, 2013

b.

NPP (New Patient Population)

The Labeling review indicates that use patent code **U-768** 6469035 Mar 15, 2018, is a "Carve Out" from the labeling.

U-768 A METHOD OF REDUCING THE CAPACITY OF EXTENDED RELEASE NICOTINIC ACID TO PROVOKE A FLUSHING REACTION BY PRETREATING AN INDIVIDUAL WITH A FLUSH INHIBITING AGENT PRIOR TO THE ADMINISTRATION OF THE EXTENDED RELEASE NICOTINIC ACID

10. PHARMACOL. CATEGORY: Lipid Regulating Agent

19. ORDER OF REVIEW

The application submission(s) covered by this review was taken in the date order of receipt. __x__ Yes ____ No If no, explain reason(s) below:

The Executive Summary

I. Recommendations

A. Recommendation and Conclusion on Approvability

NOT Approvable. (Review #1)

B. Recommendation on Phase 4 (Post-Marketing) Commitments, Agreements, and/or Risk Management Steps, if Approvable N/A

II. Summary of Chemistry Assessments

A. Description of the Drug Product(s) and Drug Substance(s)

The reference listed drug is NIASPAN® (niacin extended-release tablets), 500 mg, and 1000 mg. NDA # 020381 manufactured by Abbott Laboratories.

USP status: DS is USP compendial. DS is also EP compendial. DS meets USP monograph. There is a Niacin Tablet USP monograph, but there is no USP or PF for extended release tablet.

Drug Substance: API is Niacin, USP, supplied by [redacted] (b) (4) It is called nicotinic acid, or 3-pyridinecarboxylic acid. Niacin is "White crystals or crystalline powder, is odorless, or has a slight odor. Melts at about 235 ºC, freely soluble in boiling water, in boiling alcohol, and in solutions of alkali hydroxides and carbonates; sparingly soluble in water; practically insoluble in ether"-quoted from USP. [redacted] (b) (4)

Drug Product: It is an Extended-Release tablets (ER), matrix controlled, oral, solid dosage form and proposed in strengths 500 mg and 1000 mg. Indication and Packaging: Indicated for lipid regulation and thus appropriately packaged in 30's CRC, 100's CRC, 100's NCRC and 1000's NCRC in HPDE bottles. Inactive ingredients: Hypropmellose, Hydrogenated vegetable oil Type I, Glyceryl behenate, Colloidal silicon dioxide, Magnesium stearate and [redacted] (b) (4) Pink, [redacted] (b) (4) Polyvinyl alcohol-partially hydrolyzed, Titanium dioxide, Polyethylene glycol, Talc, Iron oxide red, Iron oxide yellow.

DP and Strength: It is an ER, matrix controlled, oral, solid dosage form and in strengths 500 mg and 1000 mg. Tablets are supplied as follows:
500 mg tablets: Bottles of 30's and 100's with Child Resistant Cap; Bottles of 100's and 1000's with Non Child Resistant Cap
1000 mg tablets: Bottles of 30's and 100's with Child Resistant Cap; Bottles of 100's and 1000's with Non Child Resistant Cap
Storage: Store at 20° to 25°C (68° to 77°F); excursions permitted between 15° and 30°C (59° and 86°F) [see USP Controlled Room Temperature].

Dispense in a tight container with child-resistant closure.

Expiration: The proposed expiration dating period is 24 months, which is supported by 3-month ACC stability data. 3-month CRT stability data are currently available.

DP Manufacturing Process: The DP is manufactured by (b) (4)

B. Description of How the Drug Product is intended to be used

Dose and Packaging: Four configurations are used. See below. Administration: There is no special instruction for administration since the DP is designed for oral administration and needs to be swallowed as is. Thresholds for Impurities: The MDD is 2000 mg. The IT and QT for impurities in DS is (b) (4) respectively. The IT and QT for the degradative products in DP is (b) (4) respectively.

C. Basis for Approvability or Not-Approval Recommendation

CMC is not approvable based on deficiencies related to drug substance specification and drug product excipients and manufacturing related questions. Other disciplines are pending.

III. Administrative

TYPE OF LETTER: Minor Deficiency Letter

REVIEW OF AN AMENDMENT AND THE OFFICE OF SCIENTIFIC INVESTIGATION (OSI) INSPECTION REPORT FINDINGS

1 EXECUTIVE SUMMARY

This submission is an amendment to an application which contains the results of fasting (#PKD_09_277) and fed (#PKD_09_278) bioequivalence (BE) studies comparing a test product, Niacin film coated, extended release, Tablet, 1000 mg, to the corresponding reference product, Niaspan (niacin tablet, film coated, extended release), 1000 mg.

This application was previously reviewed and found to have bioanalytical deficiencies related to study repeat analysis and batch run acceptance criteria[4]. In the current amendment, the firm provided: 1) their explanation as to how repeat analysis was performed and; 2) and provided more detail for why certain batch runs were rejected. In most cases the firm was able to address the deficiencies raised by the Division of Bioequivalence. However, because the firm was unable to explain inconsistencies in performance of sample repeat analysis, the reviewer determined bioequivalence of the test to reference drug product based on the original (non-reassayed data). Based on this analysis, the pharmacokinetic (PK) parameters were still within BE acceptance criteria of 80.00% to 125.00%.

The firm's fasting and fed BE studies are now acceptable. The results are summarized in the tables below.

Niacin (Nicotinuric Acid – Original Values) Dose (1 x 1000 mg) Least Squares Geometric Means, Ratio of Means, and 90% Confidence Intervals					
Fasting Bioequivalence Study (Study No. PKD_09_277) Nicotinuric Acid					
Parameter	**Test**	**Reference**	**Ratio**	**90% C.I.**	
AUC0-t (hr*ng/ml)	1991.3835	1990.5726	1	91.554	109.314
AUC∞ (hr*ng/ml)	2117.2652	2092.5795	1.01	92.397	110.797
Cmax (ng/mL)	757.80504	692.93177	1.09	101.532	117.796

Niacin (Nicotinuric Acid – Original Values) Dose (1 x 1000 mg) Least Squares Geometric Means, Ratio of Means, and 90% Confidence Intervals					
Fed Bioequivalence Study (Study No. PKD_09_278) Nicotinuric Acid					
Parameter	**Test**	**Reference**	**Ratio**	**90% C.I.**	
AUC0-t (hr*ng/ml)	9643.8458	10554.786	0.91	84.348	98.976
AUC∞ (hr*ng/ml)	9398.9533	9904.2544	0.95	87.878	102.479
Cmax (ng/mL)	2874.9324	2956.788	0.97	88.529	106.789

The dissolution testing on all strengths using the FDA-recommended method was previously found acceptable.

The Division of Bioequivalence (DB) now grants the waiver request for in vivo BE study requirements for the 500 mg strength tablet of the firm's test drug product based on criteria set forth in 21 CFR § 320.24 (b) (6).

No Office of Scientific Investigations inspections are pending or necessary.

At the request of the Division of Bioequivalence (DB), the Office of Scientific Investigations (OSI) audited clinical portions of the fasting (PKD_09-277) and fed (PKD_09_278) bioequivalence studies. Inspection of clinical portions was conducted at Sun Pharmaceutical Industries Ltd., Tandalja, Vadodara 390 020, India. Following the inspection (October 25-29th, 2010), no Form-483 was issued and no significant findings were uncovered during the inspection. The final classification of the inspection resulted in no action indicated (NAI)[1].

For the analytical site (Sun Pharmaceutical Industries Ltd., Tandalja, Vadodara - 390020, Gujarat, India) there were routine inspections completed for the following ANDAs:

- ANDA #078271 (6/29/2009 result: voluntary action indicated (VAI). The OSI report for ANDA #078271 has been reviewed by DB and found to be incomplete[2]. However, all unaddressed deficiencies related to OSI inspection were specific to issues related to nasal product study design and analysis and does not have an impact on the current ANDA submission.
- ANDA #090362 (6/17/2010 result VAI)[9] and ANDA #090178 (6/8/2010 result VAI)[3]. Both ANDA 090362 and ANDA 090178 were covered in the same OSI inspection. Some of the OSI findings were found to be significant and flagged as having possible impact on other ANDAs. These concerns are reviewed in Section 8 of this review. It was determined that none of the OSI findings would impact the current ANDA submission.

The application is **acceptable** with no deficiencies.

[1] DARRTS: ANDA #200484 CONSULT REV-BIOEQ-01(General Consult Review) Submit Date: 2/25/2011
[2] DARRTS: #078271 (REV-BIOEQ-01(General Review) Submit Date: 7/134/2009.
[3] DARRTS: ANDA #090178 CONSULT REV-DSI-05(Bioequivalence Establishment Inspection Report Review) Submit Date: 6/8/2010.

2 TABLE OF CONTENTS

3 BACKGROUND ON SUBMISSION

On 9/30/2009[4]: the firm submitted an Abbreviated New Drug Application (ANDA) for Niacin Tablet, film coated, extended release, 1000 mg. The Draft guidance for Niacin (date recommended: 12/2009) can be found at: http://www.fda.gov/downloads/Drugs/GuidanceComplianceRegulatoryInformation/Guidances/UCM188541.pdf

In the fasting (#PKD_09_277) and fed (#PKD_09_278) BE studies, the pharmacokinetic (PK) parameters of the test and reference for the active metabolite, nicotinuric acid, were within the CI acceptance criteria. Therefore, based solely on the data of the metabolite, the studies were acceptable. However, the application was found incomplete due to several analytical deficiencies related to repeat analysis and batch rejection criteria, and due to a pending OSI inspection of the clinical site for the current ANDA. The results of niacin are presented for information only. (Some of the point estimates of niacin PK parameters exceeded the limits of [0.80 to 1.25] and the CI of these PK parameters exceeded the limits of [80.00 to 125.00]).

The study result analysis from the original review is follows:

Niacin (Nicotinuric Acid) Dose (1 x 1000 mg) Least Squares Geometric Means, Ratio of Means, and 90% Confidence Intervals					
Fasting Bioequivalence Study (Study No. PKD_09_277) Nicotinuric Acid					
Parameter	**Test**	**Reference**	**Ratio**	**90% C.I.**	
AUC0-t (hr*ng/ml)	1982.1479	1977.8473	1	91.977	109.196
AUC∞ (hr*ng/ml)	2080.5507	2064.3542	1.01	92.972	109.254
Cmax (ng/mL)	754.7901	691.48968	1.09	101.694	117.161

[4] DARRTS: ANDA #200484 REV-BIOEQ-01(General Review) Submit Date: 11/13/2010

Niacin (Niacin) Dose (1 x 1000 mg) Least Squares Geometric Means, Ratio of Means, and 90% Confidence Intervals

The firm's dissolution testing data with the FDA-recommended method was previously deemed acceptable. On 5/26/2010, the firm acknowledged the FDA-recommended dissolution method and specifications.

However, the biowaiver for the lower strength (500 mg) was denied at the time of the original review.

4 REVIEW OF CURRENT AMENDMENT

On 2/17/2011, the firm responded to the deficiencies raised by the Division of Bioequivalence[5]:

FDA's Deficiency #1

1. **For the fasted Study, No. PKD-09-277, sample reanalysis was conducted for Niacin and Nicotinuric Acid for all samples pertaining to subject 16. You indicated that the sample reanalysis was conducted due to suspected "sample mix up" (Code J). Please provide an adequate and detailed explanation as to why you believed the samples were mixed up. In addition, please provide a summary table listing the original assayed values, the reassayed values and the reported values for this subject.**

Firm's Reponses #1

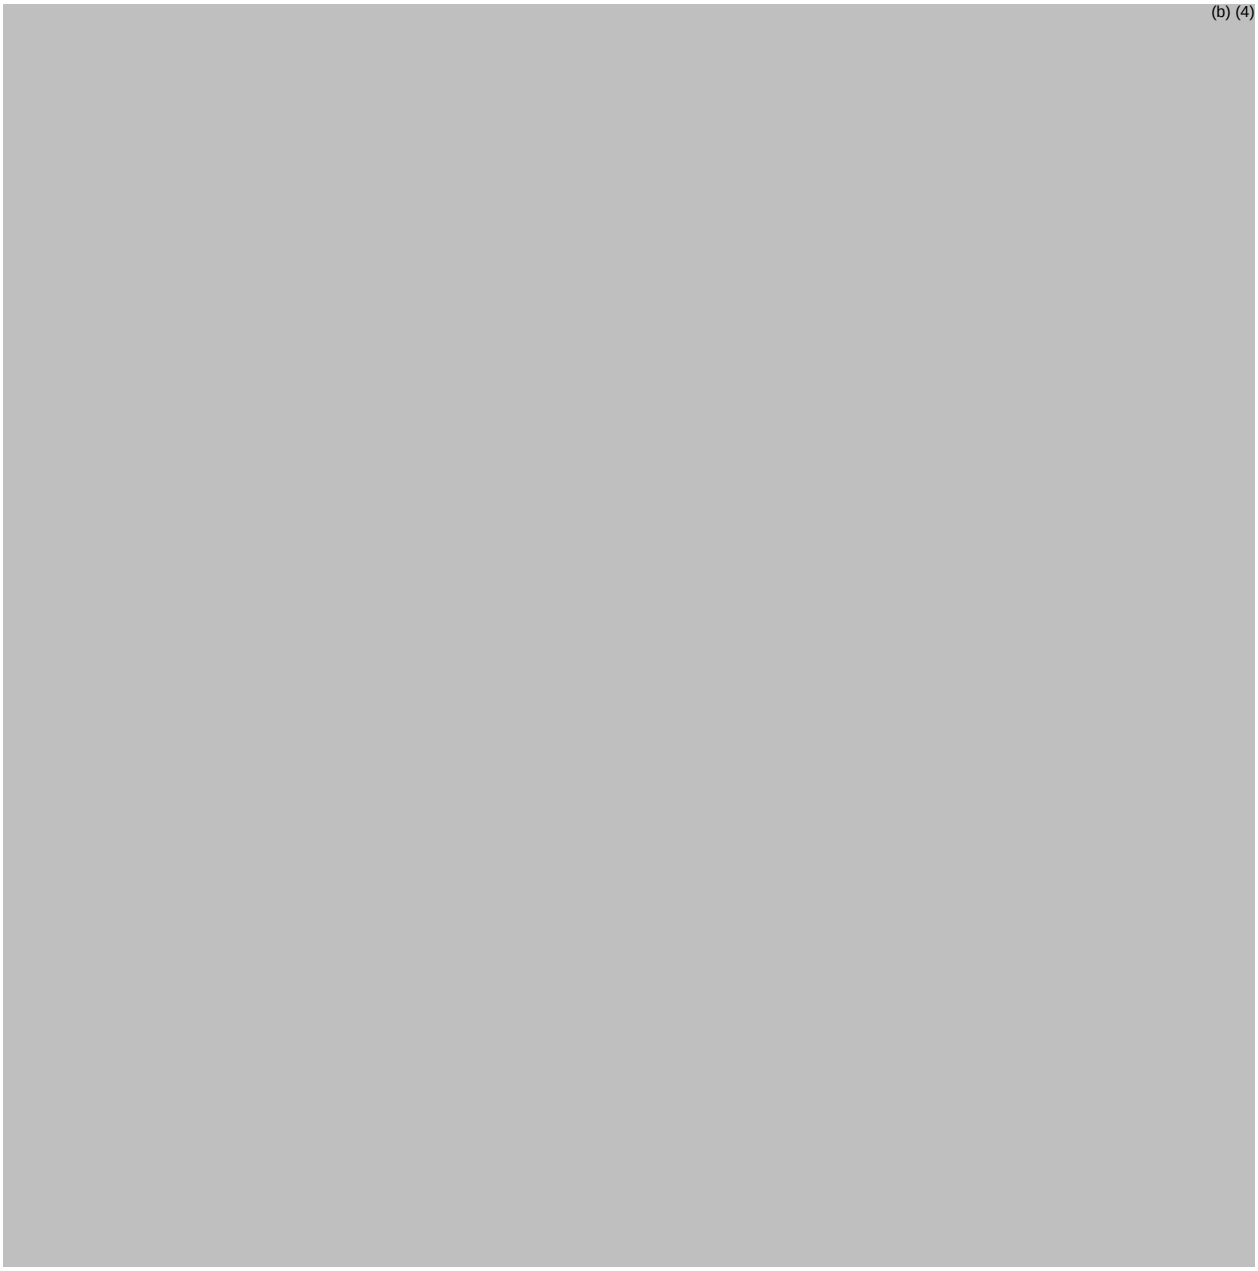
Please note that subject 16 samples were repeated as sample mix-up occurred during processing which resulted into failure of analytical batch as more than 67% of batch QC's were not meeting acceptance criteria. Data analysis with reference to known concentration, revealed that for HQC_01, LQC-A_02, LQC-B_02 and MQC-A_02 QCs, the expected concentrations were observed in the next study sample of that sequence. Hence the sequence was discontinued.

By rearranging the concentration obtained, to expected vial position, these QC concentrations falls within range. This is also confirmed by values obtained for pre dose sample (0.0 hr) and pre dose with internal standard samples (0.00 with IS). Please refer below table for the original values and rearrangement values.

Please also note that following data have been provided herewith in ***Section 5.3.1.4,*** for this subject.

1. Copy of Analytical Run Rejection form
2. Evaluation of subject 16 (rejected) run concentration (corrected vial position)
3. Summary table representing initial, repeat value, reported value of subject 16 for nicotinuric acid (PKD_09_277)
4. Summary table representing initial, repeat value, reported value of subject 16 for niacin (PKD_09_277)
5. Result sheet of Subject 16_200809 of both niacin and nicotinuric acid
6. Result sheet of Subject 16_REP_280809 of both niacin and nicotinuric acid

[5] EDR: ANDA #200484 Section 1 Cover Letter and Bioequivalence Response Submit Date: 2/17/2011



* For QC, in column titled ‘Repeat analysis concentration’ nominal value is mentioned.

Reviewer’s Comments #1

After reviewing the referenced documentation, the reviewer finds that the repeat analysis performed for Subject 16 is valid. As demonstrated in the chart above, expected quality control (QC) sample concentrations can be seen in the next study sample of the sample sequence. Therefore, it is likely that sample loading leading up to LC-MS/MS analysis was in fact done incorrectly.

Deficiency #1 has been adequately addressed by the firm.

FDA's Deficiency #2

For the fasted study, study no. PKD_09_277, all samples for subjects 8, 16, 17 and 22 were reassayed for Niacin and Nicotinuric Acid due to "rejected analytical run" (code J) . In addition, for Fed Study, study no. PKD_09_278, the entire subject samples for 28 (Niacin and Nicotinuric acid samples) and subject 13 (Nicotinuric acid samples) were reanalyzed due to "rejected analytical run"(code J) .

There are several criteria outlined in section 7.1.9 of the Standard Operating Procedure (SOP) PKD/S/019 Revision 03, entitled Sample Reanalysis and Reporting of Final concentrations detailing how samples can be classified as "rejected analytical runs." As required in, section 7.1.9.3 of this SOP, for each subject reanalysis please submit documentation of the "investigated and detailed justification of the reanalysis of the batch (form attachment-3)".

In addition, please submit in tabular format, a complete list of original assay values, repeat assay values and reported values of these subjects for evaluation. For each subject clearly justify why the original or reassayed value was reported.

Firm's Response #2

Details of runs rejected for study number PKD_09_277 and PKD_09_278 are as below.

Study Number : PKD_09_277 Analyte: Nicotinuric acid

Run ID rejected	**Remark**
180809\SUBJECT_08	Both LQC-A were not meeting acceptance criteria. Therefore 50% QCs at each level are not within acceptance.
200809\SUBJECT_16	Sample Mix up suspected as HQC_01, LQC-A_02, LQC-B_02 and MQC-A_02 QCs concentrations were observed in their next study samples. Therefore More than 67% of Batch QC's were not meeting acceptance criteria.
210809\SUBJECT_17	All CCs except CS6 were not meeting acceptance criteria. Therefore Calibration curve is not with in acceptance (More than 75% of CC's were not meeting acceptance criteria).
220809\SUBJECT_22	Both MQC-A were not meeting acceptance criteria. Therefore 50% QCs at each level are not within acceptance.

Study Number: PKD 09 277 Analyte: Niacin

Run ID rejected	Remark
180809\SUBJECT_08	Both LQC-A were not meeting acceptance criteria. Therefore 50% QCs at each level are not within acceptance.
200809\SUBJECT_16	More than 67% of Batch QC's were not meeting acceptance criteria due to sample Mix up suspected (HQC_01, LQC-A_02, LQC-B_02 and MQC-A_02 QCs concentrations were observed in other nearby study samples).
210809\SUBJECT_17	All CCs were not meeting acceptance criteria. Therefore Calibration curve is not with in acceptance (More than 75% of CC's were not meeting acceptance criteria).

Please note that analytical run ID : 220809\SUBJECT_22, (Niacin) was within acceptance criteria, inadvertently it was reported in reassay table for niacin. Concentration reported and used for pharmacokinetic and statistical, evaluation for subject 22 (Niacin) was from initial run (SUBJECT_22_220809). Hence, there is no change in concentration data. Amended report with the following changes has been provided herewith in ***Section 5.3.1.4.***

1) Table 2I : Niacin study subject reassays Sr. No. 4, (Page 35) : Subject 22 text removed from this table
2) Table 3A, Table 4A, Table 5A-5B, Table 6A-6C (Page No. 38, 41, 44-45, 50-52 respectively) : In place of Subject 22_REP data, initial data of Subject 22 (SUBJECT_22_220809) has been added

Study Number: PKD 09 278 Analyte: Niacin

Run ID rejected	Remark
160909\SUBJECT_28	Both CS8 (CS8 and CS8D) were not meeting the acceptance criteria. Therefore whole run is rejected for Nicotinuric acid due to calibration curve rejection.

Study Number : PKD 09 278 Analyte: Nicotinuric acid

Run ID rejected	Remark
110909\SUBJECT_13	CS4 & CS5 were not meeting acceptance criteria. Therefore calibration curve is not within acceptance as two consecutive calibration standards were not meeting acceptance criteria.
160909\SUBJECT_28	CS2, CS3, CS7 and CS8 were not meeting acceptance criteria. Calibration curve is not with in acceptance as two consecutive standards were not meeting acceptance criteria.
180909\SUBJECT_28_REP	MQC-A-02 and Both MQC-B and Both HQC were not meeting acceptance criteria. Therefore More than 67% of Batch QC's and /or 50% QCs at each level were not meeting

	acceptance criteria

Please also note that copies of analytical run rejection form for study number PKD_09_277 and PKD_09_278 have been provided herewith in ***Section 5.3.1.4.***

Complete list of original assay values, repeat assay values and reported values of study no. PKD_09_277 for subjects 8, 16 and 17 (Niacin and Nicotinuric acid samples) and 22 (Nicotinuric acid samples) reassayed and study no. PKD_09_278 for subject 28 (Niacin and Nicotinuric acid samples) and subject 13 (Nicotinuric acid samples) along with justification of accepting original/ reassayed value have been provided herewith in ***Section 5.3.1.4.***

Reviewer's Comments #2

As requested, the firm provided detailed justification for the reanalysis of each repeated batch run for niacin and nicotinuric acid. All reasons for reanalysis were due to either quality control samples or calibration curves not meeting acceptance criteria. The original raw batch data was reviewed by the reviewer to verify the validity of batch rejection. The original data for subject 8 for fasting study PKD_277 was submitted by the firm in a response to a telephone amendment[6]. The firm adequately addressed deficiency #3 and the reviewer agrees with the firm's criteria for rejected runs and with the resultant run reanalysis.

FDA's Deficiency #3

The DBE identified several instances where you did not follow the standard operating procedure (SOP) PKD/S/019, Sample Reanalysis and Reporting of Final concentrations, for reassay performed due to inconsistent profiles (code H). An example of this can be seen in study #PKD_09_277 for nicotinuric acid for subject 23 period 3 at 9 hours. The initial assay (145.6 ng/ml) did not differ by greater than 100% from the previous sample (106.0 ng/ml) or the subsequent sample (95.3 ng/ml). Another example is seen study PKD_09_277 for Nicotinuric acid for subject 23 period 4 at 5 hours. The plasma concentration for Nicotinuric acid for subject 23 at 4 and 5 hours in period 4 was 942.6 ng /ml (reassayed 1174.7 ng/mL) and 126.8 ng/ml, respectively. The plasma concentration at Hour-5 differed from that of Hour-4 by greater than 100% but you did not reassay this sample as you did for other samples. Please submit the following :

a) A summary table (Table 1) detailing all reassays that were performed correctly according to section 7.1.7 of SOP PKD/S/019

b) A summary table (Table 2) detailing all reassay that were performed incorrectly according to section 7.1.7 of SOP PKD/S/019 and

c) SAS-transport formatted files containing the original assay data for all samples identified in Table 2. Tables 1and 2 should contain all pertinent information including the initial value, the reassayed value, and the final reported value for each reassayed samples .

[6] EDR: ANDA #200484 Section 5.3.1.4 Fasting Study PKD _09_277 Submit Date: 10/8/2011

Firm's Response #3

Please note that based on FDA's comment we have reviewed whole raw data to identify any other instances, in addition to those referred in FDA's query. In this review, there were no other such sample time points which are qualifying for repeat analysis as per SOP PKD/S/019, Sample Reanalysis and Reporting of final concentrations, for reassay performed due to "inconsistent profiles (code H)".

Explanation of examples referred in above FDA comment is provided below:

A. Please note that in study # PKD 09 277 for Nicotinuric acid for subject 23 period 3 at 9 hours repeat analysis was conducted based on following section of SOP of PKD/S/019 Revision 03, Sample reanalysis and Reporting of Final concentrations:

7.1.7 Inconsistent profile (Code H):

7.1.7.1 Sample shall be repeated in case of inconsistency at any point of profile (except last three measurable concentrations) where concentration is found more or less than 100% from its preceding and succeeding concentration. In case of higher value preceding and succeeding value shall be consider for 100% comparison and in case of dip in profile the lower value shall be consider for 100% comparison.

7.1.7.2 In the elimination phase, in the last three measurable concentration samples, if any concentration is more than 33 % of preceding and succeeding concentration or in case of last measurable concentration, 33 % more than preceding concentration, the sample shall be repeated under code " H"

For subject 23 period 3 at 9 hours, following was the concentration.

Time point	6.00	7.00	8.00	9.00*	10.00*	12.00*	16.00
Concentration	143.2	103.8	106.0	**145.6**	**95.3**	**50.6**	BLQ
% difference from preceding value					**37.4%**		
% difference from succeeding value					**-52.8%**		

For above case, 9.0, 10.0 and 12.0hr concentrations were considered as last three measurable concentration samples. Hence in accordance with section 7.1.7.2 of above mentioned SOP repeat analysis was conducted.

B. Summary of repeat analysis under code H, for subject 23 period 4 samples in study # PKD_09_277 for Nicotinuric acid is tabulated below :

Sample ID	Original value	Code	First repeat value	Code	Second repeat value	Reported value
SUB 23 P4 2.00HRS***	942.6	B	1174.7			1174.7
SUB 23 P4 5.00 HRS	126.8	H ($)	635.2	H ($)	655.6	126.8
SUB 23 P4 6.00 HRS	567.5	H	172.1#	H	187.6	567.5
SUB 23 P4 7.00 HRS	63.9	H ($)	91.0	H ($)	100.9	63.9

($) Control Samples as per section 7.1.7.3 of Sample Reanalysis and Reporting of Final concentrations' SOP.
(#) As the Repeat sample was qualifying in repeat for IS variation so same sample set was repeated again in H code[7]

5.0, 6.0 and 7.0 hr samples were repeated again because of significant internal standard response variation for sample ID SUB_23_P4_6.00 HRS.

We agree with FDA's comment for repeating sample ID SUB_23_P4_5.00 hours. Please note that, 6 hour sample was identified for repeat under inconsistent profile and 5 hour sample was reanalyzed as control sample for this repeat. In first repeat, variation in internal standard response was observed, hence second repeat was conducted. Thus as this sample was repeated twice as a control sample original value was accepted as reportable value for this sample.

1. In first repeat analysis, 6.00hr time point showed IS variation hence second repeat analysis was conducted.
2. Second repeat analysis also showed a same trend as like first repeat. Based on results of this repeat analysis, sample mix-up for original analysis may be suspected but % difference between repeat value obtained at 6 hour was more than 30% with respect to 5 hour initial value if the values of 5 hour and 6 hour were assumed to be interchanged, hence original assay value were accepted.

Based on evaluation of all possibilities and SOP criteria for reporting value after repeat analysis (as per section 7.1.7.3 of SOP PKD/S/019 Revision 03, for all three samples (5.00hr, 6.00hr and 7.00hr), original analysis value was accepted.

However, to evaluate overall impact of possible interchange during first analysis between 5hr and 6hr sample of period – 4, pharmacokinetic and statistical evaluation have been performed with following option.

1. By assuming interchange and accepting value of SUB_23_P4_5.00 HRS as 567.5 and SUB_23_P4_6.00 HRS as 126.8.
2. By considering NRV for 5.0hr and 6.0hr sample and eliminate those from pharmacokinetic and statistical evaluation

[7] EDR: ANDA #200484 Section 5.3.1.4 Fasting Bioanalytical Report Page 32 Submit Date: 9/29/2009

In both the cases, study outcome remained unaffected, indicating no impact of these values on study results. Summary of statistical evaluation is given below :

TABLE 1

* For justification for accepting this value, refer ANDA section 5.3.1.4, Fasting bioanalytical report (subsection 16.5 Bioanalytical report Table 2A to 2M)

SAS-transport formatted files containing the original assay data for all samples identified in Table 2.

Tables 1 and 2 should contain all pertinent information including the initial value, the reassayed and the final reported value for each reassayed samples.

Please note that SAS-transport formatted files containing the original assay data for all samples identified in table two has been provided herewith in ***section 5.3.1.2.***

c) Please find below criteria for reanalysis performed for sample coded "N", with examples of how the decision was made to perform reanalysis and report the final value for reassays coded as "N".

Table-2 provided above, summarizes reassay that were performed incorrectly, all these samples (except identified as @) were repeated under code F (to confirm the value), this samples were inadvertently repeated as per procedure defined under previous version of the SOP. In newly revised version of the SOP (effective at the time of study), code 'F' was not specified, however as per revised SOP these samples were qualifying for repeat under code H (inconsistent value), which has to be repeated along with control samples. In repeat analysis done as per previous version of SOP, control sample were not analyzed.

To have clear explanation of repeat analysis of samples identified as @, please refer below mentioned table.

Time point Hrs	**5.0**	**6.0**	**7.0**	**8.0**	**9.0**	**10.0**	**12.0**	**16.0**
Subject 2	32.1	BLQ	44.8	30.7	BLQ	77.1	74.1	BLQ
Code in final report	-	BLQ-F	N	N	BLQ-F	N	N	-

For Subject 2 Period 4 sample of 6.0 Hrs & 9.0 Hrs were qualifying for repeat analysis as per SOP PKD_S_019 Section "A sample presenting concentration below lower limit of quantification while quantifiable concentrations (more than 120% of LLOQ) were obtained with the two adjacent sampling time points". So they were reanalyzed to confirm the value on 29 August 2010.

After confirming the values of 6.0 hrs & 9.0 hrs no other samples were qualifying for further repeat analysis as per SOP, however 7.0, 8.0 10.0 & 12.0 hrs were also reanalyzed applying SOP criteria "A sample presenting concentration above lower limit of quantification (more than 120% of LOQ) while non quantifiable concentrations were obtained with the two adjacent sampling time points", as one of the adjacent point value was BLQ for this samples. But these time points were not qualifying for repeat analysis as per SOP (SOP requires two adjacent sampling points to be BLQ) as only one adjacent point is BLQ. Hence reanalysis of all above mentioned samples (7.0, 8.0 10.0 & 12.0 hrs) were marked with code N as incorrectly repeated.

Review's Comment #3

- The Division of Bioequivalence observed that the firm was performing reanalysis of study samples in a non-consistent manner (please refer to examples provided in deficiency comment #3 above). The firm was asked to explain these discrepancies and to reanalyze their data to determine all instances whereby reassay were performed incorrectly. The examples presented to the firm were the following:

  1) For nicotinuric acid for subject 23, Period 3 at 9 hours, the initial assay (145.6 ng/ml) did not differ by greater than 100% from the previous sample

(106.0 ng/ml) or the subsequent sample (95.3 ng/ml), yet the firm **did** perform reanalysis of that time point.

2) For Nicotinuric acid for subject 23, Period 4 at 5 hours. The plasma concentration for Nicotinuric acid for subject 23 at 4 and 5 hours in period 4 was 942.6 ng /ml (reassayed 1174.7 ng/mL) and 126.8 ng/ml, respectively. The plasma concentration at Hour-5 differed from that of Hour-4 by greater than 100% but the firm **did not** reassay this sample as they did for other samples.

Reviewer's Comment #3 Regarding Reanalysis of Subject 23 period 3 at 9 hours

- Period 3 at 9 hours falls within the elimination phase of nicotinuric acid. As per section 7.1.7.2 of SOP PKD/S/019 Revision 3, Sample Reanalysis and Reporting of Final Concentrations, *In the elimination phase, in the last three measurable concentration samples, if any concentration is more than 33 % of preceding and succeeding concentration or in case of last measurable concentration, 33 % more than preceding concentration, the sample shall be repeated under code "H"*. The plasma concentration of subject 23 during period 3 at 9 hours differs by more 33% from the preceding and succeeding concentration and therefore is eligible for reanalysis. In this case, the firm's performance of sample reanalysis was performed as per SOP PKD/S/019, and is found acceptable by the reviewer.

For subject 23 period 3 at 9 hours, following was the concentration.

Time point	6.00	7.00	8.00	9.00*	10.00*	12.00*	16.00
Concentration	143.2	103.8	106.0	**145.6**	**95.3**	**50.6**	BLQ
% difference from preceding value					**37.4%**		
% difference from succeeding value					**-52.8%**		

For above case, 9.0, 10.0 and 12.0hr concentrations were considered as last three measurable concentration samples. Hence in accordance with section 7.1.7.2 of above mentioned SOP repeat analysis was conducted.

Reviewer's Comment #3 Regarding Reanalysis of Subject 23 period 4 at 5 hours

- The prior deficiency was issued related to subject 23 during period 4 (study #PKD_09_277) because the reviewer observed that contrary to SOP PKD/S/019, the firm did not conduct reanalysis for the 5 hour time point despite the result (942.6 ng/mL) differing by greater than 100% from the previous time point (2 hour time point of 126.8 ng/mL). In the current response to the deficiency, the firm acknowledged the validity of this observation made by DB[8].

[8] EDR: ANDA #200484 Cover Letter Submit Date: 2/17/2011

- The firm was asked to provide a summary table (Table 2) detailing all reassays that were performed incorrectly according to Section 7.1.7 of SOP PKD/S/019. In response the firm provided table 2 as shown above in the firm's response to deficiency #3. However, the reviewer was able to identify subjects that were not correctly reassayed as per SOP PKD/S/019 and that were not included in table 2. For example, for study PKD_09_277 for subject 15, Period 1, at 2 hours, the plasma concentration of nicotinuric acid was 1284.1 ng / mL, which exceeded the prior (582 ng / mL) and subsequent (492.4 ng / mL) plasma concentrations by greater than 100%. The firm **did not** reassay subject 15, Period 1 at 2 hours contrary to section 7.1.7 of SOP PKD/S/019. Due to these inconsistencies and the inability of the firm to properly highlight all the reassay inconsistencies, the reviewer used the original analytical data to determine bioequivalence. The results of this analysis for nicotinuric acid for both fasting (PKD_09_277) and fed (PKD_09_278) studies are demonstrated below:

Niacin (Nicotinuric Acid – Original Values) Dose (1 x 1000 mg) Least Squares Geometric Means, Ratio of Means, and 90% Confidence Intervals					
Fasting Bioequivalence Study (Study No. PKD_09_277) Nicotinuric Acid					
Parameter	**Test**	**Reference**	**Ratio**	**90% C.I.**	
AUC0-t (hr*ng/ml)	1991.3835	1990.5726	1	91.554	109.314
AUC∞ (hr*ng/ml)	2117.2652	2092.5795	1.01	92.397	110.797
Cmax (ng/mL)	757.80504	692.93177	1.09	101.532	117.796

Niacin (Nicotinuric Acid – Original Values) Dose (1 x 1000 mg) Least Squares Geometric Means, Ratio of Means, and 90% Confidence Intervals					
Fed Bioequivalence Study (Study No. PKD_09_278) Nicotinuric Acid					
Parameter	**Test**	**Reference**	**Ratio**	**90% C.I.**	
AUC0-t (hr*ng/ml)	9398.9533	9904.2544	0.95	87.878	102.479
AUC∞ (hr*ng/ml)	9643.8458	10554.786	0.91	84.348	98.976
Cmax (ng/mL)	2874.9324	2956.788	0.97	88.529	106.789

The fasting and fed bioequivalence studies using the original study values demonstrate PK parameters that are within the acceptable BE limits of 80.00 to 125.00%. Therefore, the study conclusions reached using either original data or reassayed data demonstrate that the test and reference drug products are bioequivalent.

FDA Deficiency #4:

SOP No. PKD/S/019 Revision 03 became effective after the study sample analyses were completed. Therefore, please provide a copy of the SOP that was effective at the time of analysis and please outline the changes made to the SOP between revision 2 and revision 3. Also, please indicate which revision of the SOP was effective at the time of the study. If PKD/S/019 Revision 2 was the only version of this SOP effective at the time of the study, please submit a copy of this SOP version.

Firm's Response #4:

Please note that SOP No.: PKD/S/019, Revision No.:03 "Sample Reanalysis and Reporting of Final Concentrations", was effective from 10-08-2009 (DD-MM- YYYY). Thus effective date of SOP is 10th August 2009 and first subject sample was analyzed on 14-08-2009 (14th August 2009). Therefore, this SOP was effective before study sample analysis was started.

Reviewer's Comment #4

The firm adequately clarified that SOP No.: PKD/S/019 was effective prior to study samples being analyzed. Deficiency #4 was adequately addressed.

FDA Deficiency #5:

SOP No. PKD/S/033, Chromatographic Analysis of study sample was referenced in SOP no. PKD/S/019 revision 3 but was not included in the application. Please submit a full copy of SOP PKD/S/033 which was effective during the study sample analysis periods.

Firm's Response #5:

Please note SOP No. PKD/S/033 revision 00 entitled "Chromatographic Analysis of study sample" effective at the time of study sample analysis has been provided herewith in ***section 5.3.1.4.***

Reviewer's Comment #5:

This deficiency has been adequately addressed by the firm.

FDA Deficiency #6:

Two concentration ranges for calibration curves (cc) i.e. 29.5, 58.9, 149.3, 345.7, 903.7, 1296.3,1517.3 & 1964.1(ng/ml) and 29.6, 59.2,149.9,347.1,907.1,1301.5,1577.6 and 1972.0 (ng/ml) were used for bioanalysis of nicotinuric acid samples in the Fasted study (study No. PKD_09_277). Please provide an explanation as to why you used two different CC concentration ranges. In addition for each CC concentration range used, please specify all subject samples that were analyzed using such range.

Firm's Response #6:

Please note that two concentration ranges for calibration curves (CC) were used for bioanalysis of Nicotinuric acid samples in the Fasted study (study No. PKD_09_277) because of following reason:
Study sample analysis was started using calibration curve range 29.5, 58.9, 149.3, 345.7, 903.7, 1296.3, 1517.3 & 1964.1(ng/ml) from 13/08/2009 (13th August 2009) and completed on 02/09/2009 (2nd September 2009).

During review of raw data it was noticed that sample ID Subject-32-P4-1.75 was qualifying for repeat analysis, hence repeat analysis of this sample was performed (Analytical Run : Repeat_04_100909) on 10 September 2009 using calibration curve solution prepared on 4th September 2009 for fed study (PKD_09_278). The calibration curve range used was 29.6, 59.2, 149.9, 347.1, 907.1, 1301.5, 1577.6 and 1972.0 (ng/ml). Method validation has been performed for calibration curve range 29.3 to 1975.6 ng/mL for nicotinuric acid. Both ranges used for study sample analysis are with in validated CC range.

Only single analytical Run: Repeat_04_100909 was analyzed using calibration curve range 29.6 to 1972.0 ng/mL.

Reviewer's Comment #6:
The firm explained that calibration curve 29.5 to 1964.1 (ng/mL) was used during all study analysis except for in one case where repeat analysis was conducted and a calibration curve ranging from 29.6 to 1972.0 ng/mL was used. The firm highlights that method validation had been performed for a calibration curve range of 29.3 to 1975.6 ng/mL which encompasses both calibration curves used during study analysis. The reviewer finds the use of two calibration curves during study analysis acceptable. The firm has adequately addressed this deficiency comment.

5 OFFICE OF SCIENTIFIC INVESTIGATIONS (OSI) REVIEW – ANALYTICAL SITE

References: ANDA #090362 and ANDA 090178

The analytical portion of ANDA #200484 took place at Sun Pharmaceutical Tandalja Vadodara – 390 020, India. Analysis began for the current studies on August 14th, 2009.

Regarding ANDA #090362 and ANDA 090178, Sun Pharmaceuticals was inspected by OSI between April 14th-16th, 2010 and April 19-23, 2010)[9,3]. Form-483 was issued by OSI in response to the inspection. The firm's response to the form-483 was evaluated by a DB reviewer on 3/14/2011[10] for ANDA #090362 and on 11/12/2010 for ANDA #090178[11]. The OSI report was evaluated in conjunction with the DB review of the OSI report to determine the impact of the inspectional finding on the current ANDA:

DSI Finding No. 1: Failure to conduct Incurred Sample Reproducibility assessments. The firm did not evaluate method reproducibility for plasma samples collected from study subjects.

Reviewer's Comments on the impact on the current ANDA No. 1:
For ANDA #200484, the firm submitted incurred sample reproducibility assessment data[12]. The bioanalytical method for this study was found to be reproducible with at least 2/3 of the samples found to be reproducible according to SOP No PKD/S/035, Revision No. 02, Identification and Analysis of Incurred Sample (effective date: 7-15-2009). Therefore, the OSI finding #1 should not have an impact on ANDA #200484.

DSI Finding No. 2A and 2B: Failure to provide adequate controls for electronic source records: A) Specific requirements and expiration times for credentials used to access electronic source records and to apply electronic signatures were not defined; B) Physical access to electronic source records were not limited to authorized personnel.

Reviewer's Comments on the impact on the current ANDA No. 2:
In the response to the logical and physical access concerns noted above, the firm indicated that they have updated their SOP to better define logical security measures. The DSI inspector found that the proposed corrective measures indicated in the firm's response was adequate. Since these issues were classified as not clinically significant, the reviewer of the OSI Report considers that the concern cited above does not impact the outcome of current BE studies[10]. Therefore, OSI finding #2 should not have a material impact on the acceptability of ANDA #200484.

---

[9] DARRTS: ANDA #090362 CONSULT REV-DSI-05(Bioequivalence Establishment Inspection Report Review) Submit Date: 6/17/2010
[10] DARRTS: ANDA#090362 REV-BIOEQ-01(General Review) Submit Date: 3/14/2011
[11] DARRTS: ANDA #090178 REV-BIOEQ-01(General Review) Submit Date: 11/12/2010
[12] EDR: ANDA #200484 Section 5.3.1.4 Fasting: Bioanalytical Report Submit Date:

DSI Finding No 3:

A. Precision and accuracy (P&A) validation data generated in run PA01 for levocitirizine[13] method was excluded from P&A global summary results without valid justification.

DSI's Evaluation: During the inspection, the firm was requested to recalculate the precision and accuracy after including the data from the rejected run P&A01. The recalculated results showed that the assay was not as precise and accurate as originally reported but remained within the acceptable limits.

Reviewer's Comments on the impact on the current ANDA No. 3A:

The DB reviewer of the OSI report found that since the OSI's finding that *Precision and accuracy (P&A) validation data generated in run PA01* is specific to the ANDA 090362. This reviewer considers that this OSI finding as an isolated issue and should not have potential impact on the related ANDAs. Therefore, the OSI finding #3A should not have a significant impact on the current ANDA.

B. Dilution linearity was not performed using the study sample matrix (K3 EDTA human plasma). It was performed using only the dilution matrix (CPDA plasma).

DSI's Evaluation: As the subject samples contained K3EDTA as the anticoagulant, the firm should have performed dilution linearity in plasma matrix containing K3EDTA. In their response, the firm acknowledged the observation and revised their SOP to include conduct of dilution linearity experiment in all the blank matrices used during a study. However, there is only one study sample (subject 17, period II, 4h of fed' study PKD/07/072) with concentration above the ULOQ (496.55ng/mL) and this sample was reanalyzed after dilution. Moreover, the dilution QCs were included in the run during the reanalysis. As all the dilution QCs met run acceptance criteria, the observation is not likely to have any significant impact on the results.

Reviewer's Comments on the impact on the current ANDA No. 3B:

The current ANDA submission did used human ethylenediaminetetraacetic acid tripotassium salt (EDTA K_3) plasma to demonstrate dilution integrity[14]. EDTA K_3 was the same anti-coagulant used during subject sample collection. Therefore, this OSI finding should not have an impact on ANDA #200484.

C. For levocitirizine, post-extract stability was performed using standards and QCs stored in auto-ampler (10°C) before auto-sampler stability was demonstrated.

DSI's Evaluation: Nevertheless, source records indicated that the study samples were stored in the auto-sampler for approximately 3h during the longest runs. As the firm demonstrated auto-sampler stability for 64h at 10 DC therefore, the

[13] OSI Finding #3 is the same for both ANDAs #090362 and #090178 except in the case of #090362 inspector refers to levocetirizine and in the case of #090178 the inspector refers to galantamine.

[14] EDR: ANDA #200484 Section 5.3.1.4 Fasting Bioanalytical Method Validation Page 25 Submit Date: 9/29/2009.

observation is not likely to affect the study data.

Reviewer's Comments on the impact on the current ANDA No. 3C:
For the current ANDA, the firm demonstrated auto-sampler stability for 73 hours[15]. Therefore, similar to the conclusion reached by the OSI inspector, this OSI observation should not likely to affect the study data of other ANDA's including ANDA #200484.

Other Findings[11]:

This inspection was requested as "FOR CAUSE" due to the DBE reviewer's concerns with reproducibility of reassayed samples. As noted by DBE, many study samples were reassayed. The reassayed samples and the reassay procedure were reviewed during the inspection. Notably, all samples from Study PKD/07/012, Subject 23 were reassayed due to an undocumented, but suspected, sample mix-up. Comparison of the initial and repeated results suggested the initial evaluation was problematic and likely involved samples assayed in the wrong order. However, due to the lack of documentation, the results from Subject 23 should be omitted. All other reassays were carried out according to acceptable established procedure.

Reviewer's Comments on the impact on the current ANDA related to other findings:
Similar to ANDA #090178, for ANDA #200484 there was a concern with the number and justification of sample reassays performed during the bio-studies. After failed attempts by the firm to justify inconsistencies found in performance of sample reassays, DB used the original study data to determine whether the test drug product met the BE acceptance criteria. As discussed above (Deficiency Comment #3), using the original data from the fasting (#PKD_09_277) and fed (#PKD_09_278) bio-studies, the firm's fasting and fed bioequivalence studies met the BE acceptance criteria of between 80% and 125%.

OSI's Conclusion:
Following evaluation of the inspectional findings and form FDA-483 response from the firm, DSI recommends that the clinical and analytical portions of the studies PKD/07/071 and PKD/07/072 be accepted for Agency review[9].

DB Reviewer's Conclusion:
The integrity of the data presented for ANDA #200484 is not affected by the OSI findings made at the analytical site, Sun Pharmaceutical Tandalja Vadodara – 390 020, India.

6 DEFICIENCY COMMENTS

None.

[15] EDR: ADNA #200484 Section 5.3.1.4 Fasting Bioanalytical Method Validation Page 28 Submit Date: 9/29/2009

7 RECOMMENDATIONS

1. The Division of Bioequivalence accepts the fasting BE study (Study # PKD_09_277) conducted by Sun Pharma Global FZE., on its Niacin Tablet, film coated, extended release, 1000 mg (lot # Lot #GK91008) comparing it to the reference listed drug, Niaspan (Niacin Tablet, film coated, extended release), 1000 mg (Lot#642142E21), manufactured by Abbott Labs.

2. The Division of Bioequivalence accepts the fed BE study (Study #PKD_09_278) conducted by Sun Pharma Global FZE., on its Niacin Tablet, film coated, extended release, 1000 mg (lot # Lot #GK91008) comparing it to the reference listed drug, Niaspan (Niacin Tablet, film coated, extended release), 1000 mg (Lot#642142E21), manufactured by Abbott Labs.

3. The firm's in vitro dissolution testing is acceptable. The dissolution testing should be conducted in 900 mL of water using Apparatus I (Basket) at 100 rpm. The test product should meet the following specifications:

   1 Hr: NMT (b) (4)%
   3 Hrs: (b) (4)%
   6 Hrs: %
   9 Hrs: %
   12 Hrs: (b) (4)%
   20 Hrs: NLT (b) (4)%

4. The dissolution testing conducted by Sun Pharma Global, on its Niacin film coated, extended release, Tablet, 1000 mg (lot # Lot #GK91008), is acceptable. The firm has conducted acceptable in vivo bioequivalence testing comparing the 1000 mg tablet of the test product with the 1000 mg tablet of the reference product, Niaspan (niacin) tablet, film coated, extended release manufactured by Abbott Labs. The formulation for the 500 mg strength is proportionally similar to the 1000 mg strength of the test product which underwent bioequivalence testing. The DB grants a waiver of in vivo bioequivalence study requirements for the 500 mg tablet of the test product under the Section 21 CFR § 320.24 (b) (6).

5. The Division of Bioequivalence deems the test product Niacin Tablet, film coated, extended release, 500 mg and 1000 mg, manufactured by Sun Pharma Global FZE., to be bioequivalent to the reference product, Niaspan (Niacin Tablet, film coated, extended release), 500 mg and 1000 mg manufactured by Abbott Labs, respectively.

The firm should be informed of the above recommendations.

1 EXECUTIVE SUMMARY

This application contains the results of fasting and fed bioequivalence (BE) studies comparing a test product, Niacin, film coated, extended release, Tablet, 1000 mg, to the corresponding reference product, Niaspan (niacin tablet, film coated, extended release), 1000 mg. Each of the BE studies was designed as a single-dose, two treatment, four period, two sequence, replicated crossover study in healthy male subjects. The firm's fasting and fed BE studies are **incomplete due to deficiencies related to bioanalytical method validation and data analysis.** The results of the bioequivalence studies are summarized in the tables below.

The pharmacokinetic (PK) parameters of the parent drug, niacin, for the test and reference products are highly variable and plasma concentrations for niacin were often found below or close to the limit of quantitation. For the approval of Niaspan, the reference listed drug (RLD) product, nicotinuric acid was accepted as the pharmacokinetic parameter to assess for bioequivalence (BE) because plasma niacin pharmacokinetic parameters were not reliable for the BE assessment due to low niacin plasma concentrations by extensive metabolism[1]. Similar data submissions have previously been accepted by the Division of Bioequivalence[2,3].

In the BE studies, the pharmacokinetic (PK) parameters of the test and reference for the active metabolite, nicotinuric acid, were within the CI acceptance criteria. Therefore the studies are acceptable based on the data of the metabolite. The results of niacin are presented for information only. (Some of the point estimates of niacin PK parameters exceeded the limits of [0.80 to 1.25] and the CI of these PK parameters exceeded the limits of [80.00 to 125.00]).

This assessment is in accordance with the Agency's current BE recommendations for Niacin, film coated, extended release Tablets[10].

The firm's dissolution testing data with the FDA-recommended method are now acceptable. Initially, the firm's dissolution was not acceptable (DARRTS: ANDA #200484 REV-BIOEQ-02(Dissolution Review) Submit Date: 3/31/2010) because the firm had not acknowledged the FDA-recommended specifications.

On 5/26/2010, the firm acknowledged the FDA-recommended dissolution method and specifications.

Despite the firm meeting the requirements for a bio-waiver of their 500 mg Niacin extended release, Tablet, the Division of Bioequivalence cannot grant the waiver until the bioanalytical method validation deficiencies are addressed.

For the clinical site (Sun Pharmaceutical Industries, Tandalja, Vadodara, 390020, Gujarat, India), there is a routine inspection request entered for this current ANDA application (ANDA #200484). The outcome is still pending.[4]

For the analytical site (Sun Pharmaceutical Industries Ltd., Tandalja, Vadodara - 390020, Gujarat, India) there was a routine inspection completed for ANDA #078271 (6/29/2009 result: voluntary action indicated and ANDA #090362 (6/17/2010 result: voluntary action indicated and ANDA #090178 (6/8/2010 result: voluntary action indicated)[5]. The DSI report for ANDA #078271 has been reviewed by DBE and found to be incomplete [DARRTS: #078271 (REV-BIOEQ-01(General Review) Submit Date: 7/134/2009]. The DSI reports for ANDA #090362 and # ANDA 090178 have not yet been reviewed by DBE.

This application is incomplete with deficiencies.

2 TABLE OF CONTENTS

3 SUBMISSION SUMMARY

3.1 Drug Product Information

Test Product	Niacin Tablet, film coated, extended release, 500 mg and 1000 mg
Reference Product	Niaspan, niacin tablet, film coated, extended release, 500 mg and 1000 mg
RLD Manufacturer[6]	Abbott Labs
NDA No.	N020381
RLD Approval Date[6]	July 28th, 1997
Indication[7]	• To reduce elevated TC, LDL-C, Apo B and TG, and to increase HDL-C in patients with primary hyperlipidemia and mixed dyslipidemia • In combination with simvastatin or lovastatin: to treat primary hyperlipidemia and mixed dyslipidemia when treatment with NIASPAN, simvastatin, or lovastatin monotherapy is considered inadequate • To reduce the risk of recurrent nonfatal myocardial infarction in patients with a history of myocardial infarction and hyperlipidemia • In combination with a bile acid binding resin: ▪ Slows progression or promotes regression of atherosclerotic disease in patients with a history of coronary artery disease (CAD) and hyperlipidemia. ▪ As an adjunct to diet to reduce elevated TC and LDL-C in adult patients with primary hyperlipidemia • To reduce TG in adult patients with severe hypertriglyceridemia.

3.2 PK/PD Information

Bioavailability[7]	Due to extensive and saturable first-pass metabolism, niacin concentrations in the general circulation are dose dependent and highly variable. Time to reach the maximum niacin plasma concentrations was about 5 hours following NIASPAN. To reduce the risk of gastrointestinal (GI) upset, administration of NIASPAN with a low-fat meal or snack is recommended. Single-dose bioavailability studies have demonstrated that the 500 mg and 1000 mg tablet strengths are dosage form equivalent but the 500 mg and 750 mg tablet strengths are not dosage form equivalent.

[6] Electronic Orange Book: http://www.accessdata.fda.gov/scripts/cder/ob/docs/obdetail.cfm?Appl_No=020381&TABLE1=OB_Rx Search Term: Niacin Last Access: 8-3-2010

[7] DRUGS@FDA: http://www.accessdata.fda.gov/scripts/cder/drugsatfda/index.cfm?fuseaction=Search.Label_ApprovalHistory Search Term: Niaspan Last Access: 8-3-10

Food Effect[7]	Should be taken with a low-fat snack[7]. Administration with food maximizes bioavailability[8]
Tmax	Approximately 5 hours
Metabolism[7]	The pharmacokinetic profile of niacin is complicated due to extensive first-pass metabolism that is dose-rate specific and, at the doses used to treat dyslipidemia, saturable. In humans, one pathway is through a simple conjugation step with glycine to form nicotinuric acid (NUA). NUA is then excreted in the urine, although there may be a small amount of reversible metabolism back to niacin. The other pathway results in the formation of nicotinamide adenine dinucleotide (NAD). It is unclear whether nicotinamide is formed as a precursor to, or following the synthesis of, NAD. Nicotinamide is further metabolized to at least N-methylnicotinamide (MNA) and nicotinamide-N-oxide (NNO). MNA is further metabolized to two other compounds, N-methyl-2-pyridone-5-carboxamide (2PY) and N-methyl-4pyridone-5-carboxamide (4PY). The formation of 2PY appears to predominate over 4PY in humans. At the doses used to treat hyperlipidemia, these metabolic pathways are saturable, which explains the nonlinear relationship between niacin dose and plasma concentrations following multiple-dose NIASPAN administration. Nicotinamide does not have hypolipidemic activity; the activity of the other metabolites is unknown.
Excretion[7]	Following single and multiple doses, approximately 60 to 76% of the niacin dose administered as NIASPAN was recovered in urine as niacin and metabolites; up to 12% was recovered as unchanged niacin after multiple dosing. The ratio of metabolites recovered in the urine was dependent on the dose administered.
Half-life[9]	Niacin: 3.82 ± 3.58 (hours) Nicotinuric Acid: 2.40 ± 0.85 (hours)
Drug Specific Issues (if any)[7]	**WARNINGS AND PRECAUTIONS** • **Severe hepatic toxicity has occurred in patients substituting sustained-release niacin for immediate-release niacin at equivalent doses.** • Myopathy has been reported in patients taking NIASPAN. The risk for myopathy and rhabdomyolysis are increased when lovastatin or simvastatin are coadministered with NIASPAN, particularly in elderly patients and patients with diabetes, renal failure, or uncontrolled hypothyroidism. • Liver enzyme abnormalities and monitoring: Persistent elevations in hepatic transaminase can occur. Monitor liver enzymes before and during treatment. • Use with caution in patients with unstable angina or in the acute phase of an MI. • NIASPAN can increase serum glucose levels. Glucose levels should be closely monitored in diabetic or potentially diabetic patients particularly during the first few months of use or dose adjustment. **USE IN SPECIFIC POPULATIONS** • Renal impairment: NIASPAN should be used with caution in

[8] Clinical Pharmacology: Search Term: Niaspan – Pharmacokinetics Last Access: 9-23-2010 http://www.clinicalpharmacology-ip.com/Forms/Monograph/monograph.aspx?cpnum=1473&sec=monphar

[9] NDA: 020381 REV-CLINPHARM-01 (General Review) Final Date: 8/13/2009

	patients with renal impairment. • Hepatic impairment: NIASPAN is contraindicated in active liver disease or significant or unexplained hepatic dysfunction or unexplained elevations of serum transaminases Gender Steady-state plasma concentrations of niacin and metabolites after administration of NIASPAN are generally higher in women than in men, with the magnitude of the difference varying with dose and metabolite. This gender differences observed in plasma levels of niacin and its metabolites may be due to gender-specific differences in metabolic rate or volume of distribution. Recovery of niacin and metabolites in urine, however, is generally similar for men and women, indicating that absorption is similar for both genders

3.3 OGD Recommendations for Drug Product[10]

Number of studies recommended:	3, fasting and fed

1.	**Type of study:**	Fasting
	Design:	Single-dose, two-treatment, two-period crossover in-vivo
	Strength:	1000 mg
	Subjects:	Normal healthy males and females, general population
	Additional Comments:	Applicants may consider using a reference-scaled average bioequivalence approach for niacin. If using this approach, please provide evidence of high variability in the bioequivalence parameters AUC and/or Cmax (i.e., within-subject variability > 30%). For general information on this approach, please refer to Haidar et al., Bioequivalence Approaches for Highly Variable Drugs and Drug Products, Pharm. Res. 25:237-241(2008).

2.	**Type of study:**	Fed
	Design:	Single-dose, two-treatment, two-period crossover in-vivo
	Strength:	1000 mg
	Subjects:	Normal healthy males and females, general population
	Additional Comments:	Applicants may consider using a reference-scaled average bioequivalence approach for niacin. If using this approach, please provide evidence of high variability in the bioequivalence parameters AUC and/or Cmax (i.e., within-subject variability > 30%). For general information on this approach, please refer to Haidar et al., Bioequivalence Approaches for Highly Variable Drugs and Drug Products, Pharm. Res. 25:237-241(2008).

http://www.fda.gov/downloads/Drugs/GuidanceComplianceRegulatoryInformation/Guidances/UCM188541.pdf Search Term: Niacin Date Recommended:12/2009 Niacin Last Access: 8-3-10

3.	**Type of study:**	Fasting
	Design:	Single-dose, two-treatment, two-period crossover in-vivo
	Strength:	750 mg
	Subjects:	Normal healthy males and females, general population
	Additional Comments:	Applicants may consider using a reference-scaled average bioequivalence approach for niacin. If using this approach, please provide evidence of high variability in the bioequivalence parameters AUC and/or Cmax (i.e., within-subject variability > 30%). For general information on this approach, please refer to Haidar et al., Bioequivalence Approaches for Highly Variable Drugs and Drug Products, Pharm. Res. 25:237-241(2008).

Analytes to measure (in plasma/serum/blood):	Niacin and its metabolite nicotinuric acid in plasma
Bioequivalence based on:	(90% CI): Niacin If niacin cannot be reliably measured, a confidence interval approach for bioequivalence determination should be used for nicotinuric acid.
Waiver request of in-vivo testing:	500 mg based on (i) acceptable bioequivalence studies on the 1000 mg strength, (ii) proportionally similarity of the formulations across all strengths, and (iii) acceptable in vitro dissolution testing of all strengths.

Source of most recent recommendations:	External Product Bioequivalence Recommendations Draft Guidance Effective 12/2009 http://www.fda.gov/downloads/Drugs/GuidanceComplianceRegulatoryInformation/Guidances/UCM188541.pdf
Summary of OGD or DBE History (for details, see Appendix 4.4):	There are no reviewed protocols for Niacin as a monotherapy.[11] There are several reviewed control documents for Niacin Extended-Release Tablets. None of the protocol documents were submitted by Sun Pharma[12]. There are two previously approved ANDAs for Niacin, Extended Release Tablets[13]: ANDA #076378 (500 mg and 750 mg) (Approval Date: 4/26/2005) (Barr) ANDA #076250 (1000 mg) (Approval Date: 4/14/2005) (Barr) ** Approval both ANDA 076378 and ANDA 076250 were based on bioequivalent plasma concentrations of Nicotinuric Acid. There are several ANDAs under review for Niacin, Extended-Release Tablets ANDA #090446[14] ANDA #090860[15] ANDA #090892[16] * The above ANDAs used Nicotinuric Acid to determine bioequivalence of Niacin. ** These above ANDAs have been reviewed by Division of Bioequivalence but are still pending final approval. Two important caveat recommendations have been highlighted in control document #01-342[17] related to bioequivalence testing of Niacin, extended release, Tablets. These recommendations are copied below

2. For bioequivalence studies of niacin extended release tablets, please quantify plasma concentrations of the parent drug and the metabolite, nicotinuric acid. If niacin cannot be reliably measured using a selective and sensitive analytical method, nicotinuric acid data should be subjected to a confidence interval approach for bioequivalence assessment. If niacin can be reliably measured, niacin data should be subjected to a confidence interval approach for bioequivalence assessment. Plasma concentration data of niacin and nicotinuric acid should be submitted to the Agency.

3. For data analysis, the DBE recommends the use of the average bioequivalence (ABE) approach for replicate and non-replicate bioequivalence studies. However, you have the option to analyze the data using the individual bioequivalence (IBE) criterion. If you choose to conduct the IBE analysis, the Division recommends that you justify your selection with any information available. You should pre-specify in the protocol the commitment to do this analysis exclusively. You should recruit study subjects from the general population as described in the guidance, "Bioavailability and Bioequivalence Studies for Orally Administered Drug Products-General Considerations". Please also refer to the guidance, "Statistical Approaches to Establishing Bioequivalence" for study design and data analysis.

7. Identification and analysis of incurred sample (effective Date: 7/15/2009)[25]. SOP No.: PKD/S/035 Revision No. 02 Supersedes No. 01.

Comments on the Pre-Study Method Validation:

1. The firm used ethylenediaminetetraacetic acid tripotassium salt (K_3-EDTA) as an anticoagulant for the method validation and collection of samples during the clinical studies[26].

2. The mean recovery values of Niacin from the low to high concentrations were 103.5%, 95.9%, 98.1%, 97.9% and 96%, respectively. The mean recovery value of the internal standard was 84.8%. The % coefficient of variation (%CV) for the quality control (QC) samples and internal standard were within acceptable ranges.

3. The mean recovery values of Niacin co-administered with aspirin from the low to high concentrations were 100.8%, 95.2%, 97.5%, 97.6%, 95.9%, respectively. The mean recovery value of the internal standard when aspirin is co-administered, is 84%. The %CV for the QC samples and internal standard were within acceptable ranges.

4. The mean recovery values of Nicotinuric Acid from the low to high concentrations were 103.6%, 96.2%, 98.1%, 93.5%, and 91.4%, respectively. The % CVs for the QC samples were within acceptable ranges.

5. The mean recovery values of Nicotinuric Acid co-administered with aspirin from the low to high concentrations were 103.9%, 93.7%, 95.9%, 93.5%, and 90.1%, respectively. The %CVs for the QC samples were within acceptable ranges.

6. In an amendment submitted 5/26/2010, the firm provided long term stability data for Niacin and Nicotinuric Acid in biological matrix at -20^{o}C for up to 130 days[27]. This submission adequately addressed a deficiency issued in a previous dissolution review[28].

7. The pre-study method validation is complete. However, this may changed based on the outcome of the DSI inspection.

Note: Total 2688 samples were analyzed

Did use of recalculated plasma concentration data change study outcome?
Uncertain

Comments from the Reviewer:

1. For the Fasted Study, Study No. PKD_09_277, sample reanalysis was conducted for Niacin and Nicotinuric Acid for all samples pertaining to subject 16. The firm indicated that sample reanalysis was conducted due to suspected "sample mix up" (Code J).

   The firm will be asked to provide an adequate and detailed explanation as to why they believed the samples were mixed up. In addition, the firm will be asked to provide a summary table listing the original assayed values, the reassayed values and the reported values for this subject.

2. For **the** Fasted Study, Study No. PKD_09_277, for subjects 8, 16, 17, and 22, all samples were reassayed for Niacin and Nicotinuric Acid due to "rejected analytical run" (code J). In addition, for Fed Study, Study No. PKD_09_278, for subject 28 (niacin and nicotinuric acid samples), and subject 13 (nicotinuric acid samples), entire subject samples were reanalyzed due to "rejected analytical run" (code J).

   There are several criteria outlined in Section 7.1.9 of the Standard Operating Procedure (SOP) PKD/S/019 Revision 03, entitled Sample Reanalysis and Reporting of Final Concentrations, detailing how samples can be classified under the reason of "rejected analytical runs." As stated in section 7.1.9.3 of this SOP, the firm will be asked to submit documentation of the "*investigated and detailed justification of the reanalysis of the batch [form-Attachment-3]"* as required by SOP PKD/S/019 Revision 3.

   In addition, the firm will be asked to submit in tabular format a complete list of original assay values, repeat assay values, and reported values of these subjects, for evaluation. For each subject, the firm should also include a brief explanation as to how the final reported value was chosen.

3. SOP No. PKD/S/019 Revision 03 became effective after the study sample analysis was completed[29]. Therefore, the firm will be asked to provide a copy of the SOP that was effective at the time of analysis and to outline the changes made to the SOP between revision 2 and revision 3. The firm will be asked to indicate which revision of the SOP was effective at the time of the study.

4. SOP No. PKD/S/033, Chromatographic Analysis of Study Sample was referenced in SOP No. PKD/S/019 revision 3 but was not included in the application. The firm will be asked to submit a full copy of SOP PKD/S/033 which was effective during the study sample analysis periods.

[29] EDR: ANDA #200484 Section 5.3.1.4 Appendix 16.5.1 and 16.5.4 Page 2064

5. For the Fasted Study (Study No. PKD_09_277) and the Fed Study (Study No. PKD_09_278), subjects were reassayed for Niacin and/or Nicotinuric Acid in order "to obtain confirming value" (designated as code F). The reviewer verified that the initial reason for performing the reassay was acceptable (i.e initial assay was performed due to sample being below limit of quantitation. Reassay was performed twice to confirm reported value).

6. The reviewer identified several instances where the firm did not follow standard operating procedure (SOP) PKD/S/019, Sample Reanalysis and Reporting of Final Concentrations, for reassay performed due to inconsistent profiles (code H). An example of this can be seen for study #PKD_09_277 for nicotinuric acid for subject 23 period 3 at 9 hours. The initial assay (145.6 ng/mL) did not differ by greater than 100% from the previous sample (106.0 ng/mL) or the subsequent sample (95.3 ng/mL). Another example is seen for study PKD_09_277 for nicotinuric acid for subject 23 period 4 at 5 hours. The plasma concentration for nicotinuric acid for subject 23 at 4 and 5 hours in period 4 was 942.6 ng/mL (reassayed 1174.7 ng/mL) and 126.8 ng/mL, respectively. The plasma concentration of period 5 differed from period 4 by greater than 100%, but the firm did not reassay this sample as it did for other samples. The firm will be asked to submit 1) a summary table (table 1) detailing all reassays that were performed correctly according to section 7.1.7 of SOP PKD/S/019; 2) a summary table (table 2) detailing all reassays that were performed incorrectly according to section 7.1.7 of SOP PKD/S/019; and 3) SAS-transport files containing the original data for all samples identified in table 2. Table 1 and 2 should contain all pertinent information including the initial value, the reassayed value, and the final reported value.

   In addition, section 7.1.7.5 is extremely unclear as to how repeat analysis was performed. The firm will be asked to explain how section 7.1.7.5 affects sample reanalysis and for every sample coded as N (incorrectly repeated) to summarize on a case by case basis how this decision was made. The firm will be asked to provide concrete examples of how the decision was made to perform reanalysis and report the final value for reassays coded as N (examples should use data from the study sample reassays tables provided in the Bioanalytical and Analytical method report.

3.7 Formulation

Location in appendix	Section 4.2, Page 76
If a tablet, is the RLD scored?	N/A
If a tablet, is the test product biobatch scored	No
Is the formulation acceptable?	**FORMULATION ACCEPTABLE**
If not acceptable, why?	

3.8 In Vitro Dissolution

Location of DBE Dissolution Review	DARRTS: ANDA#200484 REV-BIOEQ-02(Dissolution Review) Submit Date: 03/31/2010
Source of Method (USP, FDA or Firm)	FDA
Medium	Water
Volume (mL)	900 mL
USP Apparatus type	Apparatus I (Basket)
Rotation (rpm)	100 rpm
DBE-recommended specifications	**Not TO BE Released UNDER FOI** 1 hr: NMT (b)(4)% 3 hr: (b)(4)% 6 hr: % 9 hr: % 12 hr: (b)(4)% 20 hr: NLT (b)(4)%
If a modified-release tablet, was testing done on ½ tablets?	No
F2 metric calculated?	N/A- extended release tablet
If no, reason why F2 not calculated	
Is method acceptable?	**METHOD ACCEPTABLE**
If not then why?	

Reviewer's Comments:

The firm's dissolution testing data with the FDA-recommended method are now acceptable. Initially, the firm's dissolution was not acceptable because the firm had not acknowledged the FDA-recommended specifications. In an amendment submitted 5/26/2010, the firm accepted the FDA's proposed specifications of:[30]

1 Hr: NMT (b)(4)%
3 Hrs: (b)(4)%
6 Hrs: %
9 Hrs: %
12 Hrs: (b)(4)%
20 Hrs: NLT (b)(4)%

The firm also conducted acceptable dissolution testing in three different dissolution media (0.1 N HCl, pH 4.5 Acetate Buffer, and pH 6.8 Phosphate Buffer). Based on dissolution data, the reviewer found no evidence of dose dumping.

[30] EDR: ANDA #200484 Cover Letter and Response Submit Date: 5/26/2010.

3.9 Waiver Request(s)

Strengths for which waivers are requested	500 mg
Proportional to strength tested in vivo?	Yes
Is dissolution acceptable?	Yes
Waivers granted?	No
If not then why?	Due to deficiencies outlined below the ANDA is incomplete and a waiver cannot be granted.

3.10 Deficiency Comments

1. For the Fasted Study, Study No. PKD_09_277, sample reanalysis was conducted for Niacin and Nicotinuric Acid for all samples pertaining to subject 16. The firm indicated that sample reanalysis was conducted due to suspected "sample mix up" (Code J).

   The firm will be asked to provide an adequate and detailed explanation as to why they believed the samples were mixed up. In addition, the firm will be asked to provide a summary table listing the original assayed values, the reassayed values and the reported values for this subject.

2. For the Fasted Study, Study No. PKD_09_277, for subjects 8, 16, 17, and 22, all samples were reassayed for Niacin and Nicotinuric Acid due to "rejected analytical run". In addition, for Fed Study, Study No. PKD_09_278, for subject 28 (niacin and nicotinuric acid samples), and subject 13 (nicotinuric acid samples), entire subject samples were reanalyzed due to "rejected analytical run" (code J).

   - There are several criteria outlined in Section 7.1.9 of the Standard Operating Procedure (SOP) PKD/S/019 Revision 03, entitled Sample Reanalysis and Reporting of Final Concentrations, detailing how samples can be classified under the reason of "rejected analytical runs." As stated in section 7.1.9.3 of this SOP, the firm will be asked to submit documentation of the "*investigated and detailed justification of the reanalysis of the batch [form-Attachment-3]"* as required by SOP PKD/S/019 Revision 3.

   - In addition, the firm will be asked to submit in tabular format a complete list of original assay values, repeat assay values, and reported values of these subjects, for evaluation. For each subject, the firm should also include a brief explanation as to how the final reported value was chosen.

3. SOP No. PKD/S/019 Revision 03 became effective after the study sample analysis was completed[31]. Therefore, the firm will be asked to provide a copy of the SOP that was effective at the time of analysis and to outline the changes made to the SOP

[31] EDR: ANDA #200484 Section 5.3.1.4 Appendix 16.5.1 and 16.5.4 Page 2064

between revision 2 and revision 3. The firm will be asked to indicate which revision of the SOP was effective at the time of the study.

4. SOP No. PKD/S/033, Chromatographic Analysis of Study Sample was referenced in SOP No. PKD/S/019 revision 3 but was not included in the application. The firm will be asked to submit a full copy of SOP PKD/S/033 which was effective during the study sample analysis periods.

5. Two concentration ranges for calibration curves (CC) (i.e., 29.5, 58.9, 149.3, 345.7, 903.7, 1296.3, 1517.3 & 1964.1 (ng/ml) and 29.6, 59.2, 149.9, 347.1, 907.1, 1301.5, 1577.6 and 1972.0 (ng/ml)) were used for bioanalysis of nicotinuric acid samples in the Fasted Study (Study No. PKD_09_277). The firm will be asked to provide an explanation as to why they used two different CC concentration ranges. In addition, for each CC concentration range used, the firm will be asked to specify all subject samples that were analyzed using such range.

6. The DBE identified several instances where the firm did not follow the standard operating procedure (SOP) PKD/S/019, Sample Reanalysis and Reporting of Final Concentrations, for reassay performed due to "inconsistent profiles (code H)". An example of this can be seen for Study #PKD_09_277 for nicotinuric acid for subject 23 period 3 at 9 hours. The initial assay (145.6 ng/mL) did not differ by greater than 100% from the previous sample (106.0 ng/mL) or the subsequent sample (95.3 ng/mL). Another example is seen for Study PKD_09_277 for nicotinuric acid for subject 23 period 4 at 5 hours. The plasma concentration for nicotinuric acid for subject 23 at 4 and 5 hours in period 4 was 942.6 ng/mL (reassayed 1174.7 ng/mL) and 126.8 ng/mL, respectively. The plasma concentration at Hour-5 differed from that of Hour-4 by greater than 100%, but you did not reassay this sample as you did for other samples. The firm will be asked to submit 1) a summary table (Table 1) detailing all reassays that were performed correctly according to section 7.1.7 of SOP PKD/S/019; 2) a summary table (Table 2) detailing all reassays that were performed incorrectly according to section 7.1.7 of SOP PKD/S/019; and 3) SAS-Transport formatted files containing the original assay data for all samples identified in Table 2. Tables 1 and 2 should contain all pertinent information including the initial value, the reassayed value, and the final reported value for each reassayed sample.

   In addition, section 7.1.7.5 (Result of sample repeated as PK inconsistent profile)is extremely unclear as to how reanalysis was performed for samples coded "N". Please clearly explain how the criteria stated in section 7.1.7.5 affects sample reanalysis and for every sample coded as N ("incorrectly repeated"): The firm will be asked to explain concretely how this decision was made for each of these "N-coded" samples.

3.11 Recommendations

1. The Division of Bioequivalence finds the fasting BE study number (PKD_09_277) incomplete due to the deficiencies mentioned above. The firm, Sun Pharma Global FZE, conducted the fasting BE study on its test drug product, Niacin Tablet, film coated extended release, 1000 mg (Lot #GK91008), comparing it to the reference listed drug, Niaspan (Niacin Tablet, film coated, extended release) 1000 mg (Lot#642142E21), manufactured by Abbott Labs.

2. The Division of Bioequivalence finds the fasting BE study number (PKD_09_278) incomplete due to the deficiencies mentioned above. The firm, Sun Pharma Global FZE, conducted the fasting BE study on its test drug product, Niacin Tablet, film coated extended release, 1000 mg (Lot #GK91008), comparing it to the reference listed drug, Niaspan (Niacin Tablet, film coated, extended release) 1000 mg (Lot#642142E21), manufactured by Abbott Labs.

3. The firm's in vitro dissolution testing is acceptable. The dissolution testing should be conducted in 900 mL of water using apparatus I (basket) at 100 rpm. The test product should meet the following specifications:

   1 Hr: NMT (b) (4)%
   3 Hrs: (b) (4)%
   6 Hrs: %
   9 Hrs: %
   12 Hrs: (b) (4)%
   20 Hrs: NLT (b) (4)%

The firm should be informed of the above deficiency comments and recommendations.

3.12 Comments for Other OGD Disciplines

Discipline	Comment
Bio PM	For the clinical site (Sun Pharmaceutical Industries, Tandalja, Vadodara, 390020, Gujarat, India), there was a routine inspection request entered for this current ANDA application (ANDA #200484). The outcome is still pending.[32] For the analytical site (Sun Pharmaceutical Industries Ltd., Tandalja, Vadodara - 390020, Gujarat, India) there was a routine inspection completed for ANDA #078271 (6/29/2009 result: voluntary action indicated and ANDA #090362 (6/17/2010 result: voluntary action indicated and ANDA #090178 (6/8/2010 result: voluntary action indicated). The DSI report for ANDA #078271 has been reviewed by DBE and found to be incomplete DARRTS: #078271 (REV-BIOEQ-01(General Review) Submit Date: 7/134/2009 The DSI reports for ANDA #090362 and # ANDA 090178 have not yet been reviewed by DBE.

4 APPENDIX

4.1 Individual Study Reviews

4.1.1 Single-dose Fasting Bioequivalence Study

4.1.1.1 Study Design

Table 4 Study Information[33]

Study Number	PKD_09_277
Study Title	A randomized, open label, two treatment, four period, two sequence, single dose, replicated crossover, bioequivalence study of Niacin 1000mg Extended release Tablets of Sun Pharmaceutical Industries Limited, India and Niaspan® (Niacin) 1000mg Extended release Tablets of Abbott Laboratories, North Chicago, IL 60064 USA, in 36 healthy human adult subjects, under fasting conditions.
Clinical Site (Name & Address)	Sun Pharmaceutical Industries Ltd. Tandalja, Vadodara – 390 020.
Principal Investigator	Dr. Aman Khanna
Dosing Dates	Period I: 2nd June 2009, Period II: 9th June 2009, Period III: 19th June 2009 and Period IV: 30th June 2009
Analytical Site (Name & Address)	Sun Pharmaceutical Industries Ltd. Tandalja, Vadodara – 390 020.
Analysis Dates	From 14th August 2009 to 18th September 2009 (5 days)
Analytical Director	Mr. (b) (6)
Storage Period of Biostudy Samples (no. of days from the first day of sample collection to the last day of sample analysis)	From 2nd June, 2009 to 18th September, 2009 (109 days)

Table 5. Product information[34]

Product	Test	Reference
Treatment ID	A	B
Product Name	Niacin Extended Release Tablets, 1000 mg	Niaspan® (Niacin extended-release tablets), 1000 mg
Manufacturer	Sun Pharmaceutical Industries Limited India.	Abbott Laboratories, North Chicago, IL 60064 USA
Batch/Lot No.	GK91008B	642142E21

Manufacture Date	May 2009	
Expiration Date		28th January 2011
Strength	1000 mg	1000 mg
Dosage Form	Tablets	Tablets
Bio-Batch Size	(b) (4) Tablets	
Production Batch Size	Tablets	
Potency (Assay)	98.9 %	99.0 %
Content Uniformity (mean, %CV)[35]	99.5%, %CV=0.6%	
Dose Administered	1000 mg	1000 mg
Route of Administration	Oral	Oral

Table 6. Study Design, Single-Dose Fasting Bioequivalence Study[36]

Number of Subjects	36 Enrolled 6 Discontinued 30 Completed
No. of Sequences	2
No. of Periods	4 Period I: 2nd June 2009, Period II: 9th June 2009, Period III: 19th June 2009 and Period IV: 30th June 2009
No. of Treatments	2
No. of Groups	1
Washout Period	Period I, II, III and IV were separated by washout period of 7, 10 and 11 days respectively.
Randomization Scheme[37]	(Please see randomization scheme below)
Blood Sampling Times	0, 0.25, 0.50, 0.75, 1.00, 1.25, 1.50, 1.75, 2.00, 2.50, 3.00, 3.50, 4.00, 5.00, 6.00, 7.00, 8.00, 9.00, 10.00, 12.00 and 16.00 hours post-dose. (21 Time points)
Blood Volume Collected/Sample	6 mL pre-dose 4 mL post dose samples
Blood Sample Processing/Storage	All blood samples were drawn into blood collection tubes containing K_3 EDTA[38]. Study blood samples were centrifuged at 3000 rpm under refrigeration at 4°C for 10 min within 1.5 hr of blood sample collection. Plasma sample were divided in to two aliquots (original & duplicate) and stored within 2 hours of the blood sampling in suitably labeled polypropylene tubes at –20°± 5° C or colder until transfer of study sample.
IRB Approval	May 30th, 2009
Informed Consent	May 30th, 2009

Length of Fasting[39]	Supervised fast for at least 10 hours prior to dosing, and 4 hours after dosing was maintained
Length of Confinement[39]	12 hours prior to drug administration until after the 24-hour post-dose
Safety Monitoring[39]	Seated blood pressure, pulse rate will be recorded after check-in, pre-dose and at 1.0, 2.0, 4.0, 8.0, 12.0 hrs and at checkout after drug administration. Oral temperature recording will be done at the time of check-in, are pre-dose, 4.0, 12.0 hours post dose and at checkout. For the safety of subjects, Haematology, urine and biochemistry investigations will be done. Beta, HCG pregnancy test, will be done at check-in of each period for female volunteers.

Table 10. Protocol Deviations, Fasting Bioequivalence Study

Study No: PKD_09_277
There was no protocol deviation observed during conduct of study and reporting of results.

Comments on Dropouts/Adverse Events/Protocol Deviations:

1. No serious adverse events (SAEs) were reported during the fasting BE Study.

2. Two (2) subjects (subjects 9 and 30) experienced emesis while taking the reference drug product. Both subjects were withdrawn from study[41] as recommended by Agency guidance, Bioavailability and Bioequivalence Studies for Orally Administered Drug Products – General Considerations (effective Date: March 2003). Note: Median Tmax were 1.62 h for Treatment A and 1.65 h for treatment B.[42]

Occurrence: 1= Single Episode, 2 = Intermittent, 3 = Continuous.											
Cause (Relation to Drug): 1 = Definite, 2 = Probable, 3 = Possible, 4 = Unlikely.											

3. Six (6) subjects (Subjects 1,7,9,11,25, and 30) withdrew from the study and were not replaced. One (1) subject withdrew from the study before Period 1 dosing and was replaced with a standby subject. All withdrawals and replacements of subjects were conducted according to stated firm's protocol.

4. There were no protocol deviations during the fasting portion of the BE study as indicated in Section 16.2.2[43].

5. No blood sampling deviations were reported by the firm.

Inter Day Accuracy (% Actual)	102.4	103.4	96.1	101.4	102.6

Comments on Study Assay Validation:

1. The firm demonstrated assay validation using two different standard curves for Nicotinuric Acid. The firm did not explain the reason for performing two sets of assay validation assays. The firm will be asked to explain why two different standard curves were used. In addition, the firm will be asked to specify which standard curve was used for each subject.

2. To evaluate reproducibility of data[44] generated in the fasting BE study 4.8% (120 out of 2519 samples) of incurred study samples were randomly selected and reassayed[45]. The bioanalytical method for this study was found to be reproducible with at least 2/3 of the samples found to be reproducible according to SOP No PKD/S/035, Revision No. 02, Identification and Analysis of Incurred Sample (effective date: 7-15-2009)[45].

The study assay validation was incomplete.

Any interfering peaks in chromatograms?	No
Were 20% of chromatograms included?	2, 3, 4, 5, 6, 8, and 10 / 30 subjects (serial) (23% of chromatograms)
Were chromatograms serially or randomly selected?	Serially

Comments on Chromatograms:

Acceptable

Table 12. SOP's Dealing with Bioanalytical Repeats of Study Samples

SOP No.	Effective Date of SOP	SOP Title
PKD/S/013	7-3-2009	Bioanalytical Method Validation

[44] Currently, the FDA does not have recommendations concerning incurred sample reproducibility (ISR) studies.
[45] EDR: ANDA #200484 Section 5.3.1.4 Fasting: Bioanalytical Report

PKD/S/035	7/15/2009	Identification and analysis of incurred sample
PKD/S/019	10-08-2009	Sample reanalysis and Reporting of Final concentrations. (Revision No.: 03)

Table 13. Additional Comments on Repeat Assays

Were all SOPs followed?	No
Did recalculation of PK parameters change the study outcome?	No
Does the reviewer agree with the outcome of the repeat assays?	No
If no, reason for disagreement	As detailed above, the reviewer requested additional information related to repeat assays. In addition, the reviewer requested that SOP PKD/S/109 Revision 2 be submitted, which was the SOP in affect at the time of data analysis.

Summary/Conclusions, Study Assays:

SOP PKD/S/019, Sample reanalysis and Reporting of Final concentrations (Revision No.: 03), was only effective 10-08-2009, which is after data analysis took place. The firm will be asked to submit the SOP PKD/S/019 that was effective when data analysis was being performed and to detail subsequent revisions made to this SOP.

Study assays are incomplete.

Comments on Pharmacokinetic and Statistical Analysis:

1. The reviewer specified the linear range used to calculate Kel and therefore used the SAS code CALKE for statistical analysis. Because this was a 2 sequence, 4 period, replicate study, the reviewer used the SAS program modified-replicate.sas.

2. Because the detection of Niacin in plasma is highly variable, it could not be used to determine bioequivalence. As per FDA recommendation, if niacin cannot be reliably measured, a confidence interval approach for bioequivalence determination should be used for Nicotinuric Acid[10]. Nicotinuric Acid as a proxy of Niacin has been used in other ANDA submissions to determine bioequivalence[2,3].

3. The mean AUC_t/AUC_∞ ratio for nicotinuric acid is greater than 0.9 for both test and reference and therefore indicates that the firm's sampling schedule was carried out for a sufficient period of time. The minimum AUC_t/AUC_∞ ratio did not fall below 0.80 for either test or reference.

4. The mean AUC_t/AUC_∞ ratio for niacin is greater than 0.8 for both the test and reference; however, the ranges of the ratios vary greatly. This is expected due to the high variability associated with this particular analyte and is further supported by the results obtained in the study for this particular analyte.

Summary and Conclusions, Single-Dose Fasting Bioequivalence Study:

The single-dose fasting bioequivalence study with 1 x 1000 mg Niacin Extended Release Tablets is incomplete due to deficiencies outlined in Section 3.10. In addition, it is pending the outcome of DSI inspections.

Table 19. Study Information

Study Number	**PKD_09_278**
Study Title	A randomized, open label, two treatment, four period, two sequence, single dose, replicated crossover, bioequivalence study of Niacin 1000mg Extended release Tablets of Sun Pharmaceutical Industries Limited, India and Niaspan® (Niacin) 1000mg Extended release Tablets of Abbott Laboratories, North Chicago, IL 60064 USA, in 36 healthy human adult subjects, under fed conditions.
Clinical Site (Name & Address)	Sun Pharmaceutical Industries Ltd. Tandalja, Vadodara – 390 020 (INDIA) Phone: 91-265-2350789, 91-265-6615500; Fax: 91-265-2354897
Principal Investigator	Dr. Aman Khanna
Dosing Dates	Period I: 4th June 2009; Period II: 11th June 2009, Period III: 27th June 2009 Period IV: 2nd July 2009
Analytical Site (Name & Address)	Sun Pharmaceutical Industries Ltd., Tandalja, Vadodara -390020, India. Tel: +91-265-6615500, 2350789 Fax: 91-265-2354897
Analysis Dates	From 6th September, 2009 to 22nd September, 2009
Analytical Director	Mr. (b) (6)
Storage Period of Biostudy Samples (no. of days from the first day of sample collection to the last day of sample analysis)	From 4th June, 2009 to 22nd September, 2009 (111 days)

Table 20. Product Information

Product	Test	Reference
Treatment ID	A	B
Product Name	Niacin Extended Release Tablets, 1000 mg	Niaspan® (Niacin extended-release tablets), 1000 mg
Manufacturer	Sun Pharmaceutical Industries Limited India.	Abbott Laboratories, North Chicago, IL 60064 USA
Batch/Lot No.	GK91008B	642142E21
Manufacture Date	May 2009	N/A
Expiration Date	N/A	28th January 2011
Strength	1000 mg	1000 mg
Dosage Form	Tablets	Tablets
Bio-batch Size	(b) (4) Tablets	N/A
Production Batch Size	Tablets	N/A
Potency	98.9 %	99.0 %
Content Uniformity (AV)[35]	99.5%, %CV=0.6%	
Dose Administered	1000 mg	1000 mg
Route of Administration	Oral	Oral

Table 21. Study Design, Single-Dose Fed Bioequivalence Study[46]

No. of Subjects	36 Enrolled 4 Discontinued 32 Completed
No. of Sequences	2
No. of Periods	4 Period I: June 4th, 2009, Period II: June 11th, 2009, Period III June 27th, 2009 and Period IV: July 2nd 2009
No. of Treatments	2
No. of Groups	1
Washout Period	Period I, II, III and IV were separated by washout period of 7, 16 and 5 days respectively
Randomization Scheme[47]	(Please see below)
Blood Sampling Times	0 (pre-dose), 0.5, 1.0, 1.5, 2.0, 2.5, 3.0, 3.5, 4.0, 4.5, 5.0, 5.5, 6.0, 6.5, 7.0, 7.5, 8.0, 9.0, 10.0, 12.0, 16.0 hours post-dosing. (21 time points)
Blood Volume Collected/Sample	6 mL will be collected pre-dose 4 mL will be collected post-dose at each time point

[46] EDR: ANDA #200484 Section 5.3.1.2 Fed: Synopsis Submit Date 9/29/2009
[47] EDR: ANDA #200484 Section 5.3.1.2 Fed: Protocol Submit Date 9/29/2009

Blood Sample Processing/Storage	All blood samples were drawn into blood collection tubes containing K_3 EDTA. Study blood samples were centrifuged at 3000 rpm under refrigeration at 4°C for 10 min within 1.5 hr of blood sample collection. Plasma sample were divided in to two aliquots (original & duplicate) and stored within 2 hours of the blood sampling in suitably labeled polypropylene tubes at –20°± 5° C or colder until transfer of study sample.
IRB Approval	May 30th, 2009
Informed Consent	May 30th, 2009
Length of Fasting Before Meal[47]	Overnight fast for at least 10 hours, subjects will receive single oral dose of the assigned formulation with 240mL of water after administration of high calorie high fat breakfast at least 30 minutes prior to dosing.
Length of Confinement[47]	From at least 12 hours prior to drug administration until after 24 hours post dose.
Safety Monitoring[47]	Seated blood pressure, pulse rate will be recorded after check-in, pre-dose and at 1.0, 2.0, 4.0, 8.0, 12.0 hrs and at checkout after drug administration. Oral temperature recording will be done at the time of check-in, are pre-dose, 4.0, 12.0 hours post dose and at checkout. For the safety of subjects, Haematology, urine and biochemistry investigations will be done. Beta, HCG pregnancy test, will be done at check-in of each period for female volunteers.

Standard FDA Meal Used?	Yes	
If No, then meal components and composition is listed in the tables below

B. Adverse Events considered for both formulation*		
Investigations		
Hemoglobin decreased	2 (22.22)	
Alanine aminotransferase decreased	1 (11.11)	
Aspartate aminotransferase increased	1 (11.11)	
Haematocrit decreased	1 (11.11)	
Platelet count increased	1 (11.11)	
White blood cells urine positive	2 (22.22)	
Red blood cells urine positive	1 (11.11)	
Total	**9 (100.00)**	

* Significant lab abnormality observed during lab assessment (hematology and biochemistry) for subject no. 25 (period III check-in) 03, 05, 06, and 32 (period IV check-out). Since there were no lab assessment done between period I and III, & period III and IV, these adverse events were considered to have emerged from both the formulation.

Table 25. Protocol Deviations, Fed Bioequivalence Study

Study No: PKD_09_278		
Type	**Subject (Test)**	**Subject (Reference)**
For subject No.: 30 in Period II high-calorie high-fast breakfast have been given 29 minutes prior to drug administration.	Subject No. 30 (01 subject)	NA

Comments on Adverse Events/Protocol Deviations:

1. No serious adverse events were reported during the fasting BE study.

2. Four (4) subjects withdrew from the study and were not replaced. None of the subjects withdrew for serious health reasons. All withdrawals of subjects were conducted according to stated firm's protocol.

3. No significant protocol deviations occurred.

4. No blood sampling deviations were reported.

Comments on Study Assay Validation:

To evaluate reproducibility[50] of data generated in the fasting BE study 4.8% (128 out of 2688 samples) of incurred study samples were randomly selected and reassayed[51]. The bioanalytical method for this study was found to be reproducible with at least 2/3 of the samples found to be reproducible according to SOP No PKD/S/035, Revision No. 02, Identification and Analysis of Incurred Sample (effective date: 7-15-2009)[45].

Study assay validation is acceptable.

Any interfering peaks in chromatograms?	No
Were 20% of chromatograms included?	1, 2, 3, 4, 5, 6, and 7 (7/32) (21% of chromatograms)
Were chromatograms serially or randomly selected?	Serially

Comments on Chromatograms:

Acceptable

Table 27. SOP's Dealing with Bioanalytical Repeats of Study Samples

SOP No.	Effective Date of SOP	SOP Title
PKD/S/013	7-3-2009	Bioanalytical Method Validation
PKD/S/035	7/15/2009	Identification and analysis of incurred sample
PKD/S/019	10-08-2009	Sample reanalysis and Reporting of Final concentrations. (Revision No.: 03)

Table 28. Additional Comments on Repeat Assays

Were all SOPs followed?	No
Did recalculation of PK parameters change the study outcome?	No
Does the reviewer agree with the outcome of the repeat assays?	No
If no, reason for disagreement	As detailed above, the reviewer requested additional information related to repeat assays. In addition, the reviewer requested that SOP PKD/S/109 Revision 2 be submitted, which was the SOP in affect at the time of data analysis.

Summary/Conclusions, Study Assays:

Study assay analysis is incomplete due to deficiencies outlined above. In addition, there is a DSI inspection pending.

[50] Currently, the FDA does not have recommendations concerning incurred sample reproducibility (ISR) studies.

Comments on Pharmacokinetic and Statistical Analysis:

1. The reviewer specified the linear range used to calculate Kel and therefore used the SAS code CALKE for statistical analysis. Because this was a 2 sequence, 4 period, replicate study, the reviewed used the SAS program modified-replicate.sas.

2. Because the detection of Niacin in plasma is highly variable, it could not be used to determine bioequivalence. As per FDA recommendation, if niacin cannot be reliably measured, a confidence interval approach for bioequivalence determination should be used for Nicotinuric Acid[10]. Nicotinuric Acid as a proxy of Niacin has been used in other ANDA submissions to determine bioequivalence[2,3].

3. The mean AUC_t/AUC_∞ ratio for nicotinuric acid is greater than 0.9 for both test and reference and therefore indicates that the firm's sampling schedule was carried out for a sufficient period of time. For nicotinuric acid, the minimum AUC_t/AUC_∞ ratio did not fall below 0.80 for either test or reference.

4. The mean AUC_t/AUC_∞ ratio for niacin is greater than 0.8 for only the reference product. The mean for the test is less than 0.5. The ranges of the ratios vary greatly for both test and reference products. This is expected due to the high variability associated with this particular analyte and is further supported by the results obtained in the study for this particular analyte.

5. Food effect: It is documented that food intake maximizes bioavailability of niacin[8]. The analysis of Nicotinuric Acid plasma concentrations during the fed and fasting studies indicate that there is a food effect when ingesting this drug product. There was an approximate 274% and 131% increase in Nicotinuric Acid Cmax and Tmax, respectively, due to food intake in subjects that took the test drug product. This food effect was also observed with the reference product which demonstrated a 318% and 146% increase in Cmax and Tmax of Nicotinuric Acid, respectively.

Summary/Conclusions, Single-Dose Fed Bioequivalence Study:

The single-dose fed bioequivalence study with 1 x 1000 mg Niacin Extended Release Tablets is incomplete due to deficiencies outlined in Section 3.10. In addition, it is pending the outcome of DSI inspections.

4.2 Formulation Data[52]

(b) (4)

[52] EDR: ANDA #200484 Section 2.7.1 CTD Tables Submit Date 9/29/2009

Following this page, 3 Pages Withheld in Full as (b)(4)

(b) (4)

Is there an overage of the active pharmaceutical ingredient (API)?	NO
If the answer is yes, has the appropriate chemistry division been notified?	N/A
If it is necessary to reformulate to reduce the overage, will bioequivalence be impacted?	N/A
Comments on the drug product formulation:	Product formulation acceptable.

Following this page, 1 Page Withheld in Full as (b)(4)

(b) (4)

Reviewer's Comments:

1. Based on the maximum daily dose of Niacin, all excipients used in the 500 mg and 1000 mg test product are within allowable limits.

2. (b) (4) . According to the SUPAC-MR guidance , the ratios of inactive ingredients (in this case, rate

[58] Guidance for Industry: SUPAC-MR: Modified Release Solid Oral Dosage Forms Scale-Up and Postapproval Changes: Chemistry, Manufacturing, and Controls; In Vitro Dissolution Testing and In Vivo Bioequivalence Documentation (Effective September 1997).

controlling inactive ingredients) to total weight between the 500 mg and 1000 mg strength test products are proportional based on criteria for a level 1 change in components and composition. Specifically, for a level 1 change, the guidance recommends that the *total additive effect of all release controlling excipient changes should not be more than 5% w/w of the total release controlling excipients in the original approved formulation*.

3. The formulations are acceptable.

BIOEQUIVALENCE DEFICIENCIES

ANDA: 200484

APPLICANT: Sun Pharma Global

DRUG PRODUCT: Niacin Tablets, film coated, extended release, 500 mg and 1000 mg

The Division of Bioequivalence (DBE) has completed its review and has identified the following deficiencies:

1. For the Fasted Study, No. PKD_09_277, sample reanalysis was conducted for Niacin and Nicotinuric Acid for all samples pertaining to subject 16. You indicated that sample reanalysis was conducted due to suspected "sample mix up" (Code J). Please provide an adequate and detailed explanation as to why you believed the samples were mixed up. In addition, please provide a summary table listing the original assayed values, the reassayed values and the reported values for this subject.

2. For the Fasted Study, Study No. PKD_09_277, for subjects 8, 16, 17, and 22, all samples were reassayed for Niacin and Nicotinuric Acid due to "rejected analytical run" (code J). In addition, for Fed Study, Study No. PKD_09_278, for subject 28 (niacin and nicotinuric acid samples), and subject 13 (nicotinuric acid samples), entire subject samples were reanalyzed due to "rejected analytical run" (code J).

   There are several criteria outlined in Section 7.1.9 of the Standard Operating Procedure (SOP) PKD/S/019 Revision 03, entitled Sample Reanalysis and Reporting of Final Concentrations, detailing how samples can be classified as "rejected analytical runs." As required in section 7.1.9.3 of this SOP, for each subject reanalysis, please submit documentation of the "*investigated and detailed justification of the reanalysis of the batch [form-Attachment-3]".*

   In addition, please submit in tabular format a complete list of original assay values, repeat assay values, and reported values of these subjects, for evaluation. For

each subject, please clearly justify why the original or reassayed value was reported.

3. The DBE identified several instances where you did not follow the standard operating procedure (SOP) PKD/S/019, Sample Reanalysis and Reporting of Final Concentrations, for reassay performed due to "inconsistent profiles (code H)". An example of this can be seen for Study #PKD_09_277 for nicotinuric acid for subject 23 period 3 at 9 hours. The initial assay (145.6 ng/mL) did not differ by greater than 100% from the previous sample (106.0 ng/mL) or the subsequent sample (95.3 ng/mL). Another example is seen for Study PKD_09_277 for nicotinuric acid for subject 23 period 4 at 5 hours. The plasma concentration for nicotinuric acid for subject 23 at 4 and 5 hours in period 4 was 942.6 ng/mL (reassayed 1174.7 ng/mL) and 126.8 ng/mL, respectively. The plasma concentration at Hour-5 differed from that of Hour-4 by greater than 100%, but you did not reassay this sample as you did for other samples. Please submit 1) a summary table (Table 1) detailing all reassays that were performed correctly according to section 7.1.7 of SOP PKD/S/019; 2) a summary table (Table 2) detailing all reassays that were performed incorrectly according to section 7.1.7 of SOP PKD/S/019; and 3) SAS-Transport formatted files containing the original assay data for all samples identified in Table 2. Tables 1 and 2 should contain all pertinent information including the initial value, the reassayed value, and the final reported value for each reassayed sample.

   In addition, section 7.1.7.5 (Result of sample repeated as PK inconsistent profile)is extremely unclear as to how reanalysis was performed for samples coded "N". Please provide concrete examples of how the decision was made to perform reanalysis and report the final value for reassays coded as N.

4. SOP No. PKD/S/019 Revision 03 became effective after the study sample analyses were completed. Therefore, please provide a copy of the SOP that was effective at the time of analysis and please outline the changes made to the SOP between revision 2 and revision 3. Please also indicate which revision of the SOP was effective at the time of the study. If PKD/S/019 Revision 2 was the only version of this SOP effective at the time of the study, please submit a copy of this version of SOP.

5. SOP No. PKD/S/033, Chromatographic Analysis of Study Sample was referenced in SOP No. PKD/S/019 revision 3 but was not included in the application. Please submit a full copy of SOP PKD/S/033 which was effective during the study sample analysis periods.

6. Two concentration ranges for calibration curves (CC) [i.e., 29.5, 58.9, 149.3, 345.7, 903.7, 1296.3, 1517.3 & 1964.1 (ng/ml) and 29.6, 59.2, 149.9, 347.1, 907.1, 1301.5, 1577.6 and 1972.0 (ng/ml)] were used for bioanalysis of nicotinuric acid samples in the Fasted Study (Study No. PKD_09_277). Please provide an explanation as to why you used two different CC concentration ranges. In addition, for each CC concentration range used, please specify all subject samples that were analyzed using such range.

Sincerely yours,

I. EXECUTIVE SUMMARY

This is a review of the dissolution testing data only.

This application references the (RLD), Niaspan® Extended Release Tablets, manufactured by Abbott (NDA 020381, approved date: July 28, 1997).

There is no USP method for this product but there is an FDA-recommended method. The firm's dissolution testing data with the FDA-recommended method are acceptable. However, the firm proposed specifications are not acceptable. Based on the submitted data, the Division of Bioequivalence (DBE) recommends the following specifications:

1 Hr: NMT (b) (4)%
3 Hrs: (b) (4)%
6 Hrs: %
9 Hrs: %
12 Hrs: (b) (4)%
20 Hrs: NLT (b) (4)%

The firm will be requested to acknowledge the dissolution method and the above specifications.

The firm also conducted acceptable dissolution testing in three different dissolution media (0.1 N HCl, pH 4.5 Acetate Buffer, and pH 6.8 Phosphate Buffer).

The firm did not provide the long term stability (LTS) data of niacin in frozen plasma samples. The firm is requested to submit LTS data for at least 111 days to cover the entire length of the maximum storage duration of the BE study samples (i.e., from the time when the first blood sample was drawn until the time when the last plasma sample was analyzed).

The DBE will review the fasted and fed BE studies and the waiver request at a later date.

Table 1: SUBMISSION CONTENT CHECKLIST

Information			YES	NO	N/A
Did the firm use the FDA-recommended dissolution method			☒	☐	☐
Did the firm use the USP dissolution method			☐	☐	☒
Did the firm use 12 units of both test and reference in dissolution testing			☒	☐	☐
Did the firm provide complete dissolution data (all raw data, range, mean, % CV, dates of dissolution testing)			☒	☐	☐
Did the firm conduct dissolution testing with its own proposed method			☐	☒	☐
Is FDA method in the public dissolution database (on the web)			☒	☐	☐
SAS datasets submitted to the electronic document room (edr)	Fasting BE study	PK parameters	☒	☐	☐
		Plasma concentrations	☒	☐	☐
	Fed BE study	PK parameters	☒	☐	☐
		Plasma concentrations	☒	☐	☐
	Other study	PK parameters	☐	☐	☒
		Plasma concentrations	☐	☐	☒
Are the DBE Summary Tables present an in either PDF and/or MS Word Format?			☒	☐	☐
If any of the tables are missing or incomplete please indicate that in the comments and request the firm to provide the complete DBE Summary Tables 1-16.					
Is the Long Term Storage Stability (LTSS) sufficient to cover the maximum storage time of the study samples?			☐	☒	☐
If the LTSS is NOT sufficient please request the firm to provide the necessary data.					

DBE External Dissolution Database for Niacin

RLD Information

Active Ingredient:	NIACIN
Dosage Form;Route:	TABLET, EXTENDED RELEASE; ORAL
Proprietary Name:	NIASPAN
Applicant:	ABBOTT
Strength:	1GM
Application Number:	N020381
Product Number:	004
Approval Date:	Jul 28, 1997
Reference Listed Drug	Yes
RX/OTC/DISCN:	RX

Contains Nonbinding Recommendations

Draft Guidance on Niacin

This draft guidance, once finalized, will represent the Food and Drug Administration's (FDA's) current thinking on this topic. It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. You can use an alternative approach if the approach satisfies the requirements of the applicable statutes and regulations. If you want to discuss an alternative approach, contact the Office of Generic Drugs.

Active ingredient: Niacin

Form/Route: Extended Release Tablets/Oral

Recommended studies: 3 studies

1. Type of study: Fasting
   Design: Single-dose, two-way crossover *in-vivo*
   Strength: 1000 mg
   Subjects: Healthy males and nonpregnant females, general population.
   Additional comments: Applicants may consider using a reference-scaled average bioequivalence approach for niacin. If using this approach, please provide evidence of high variability in the bioequivalence parameters AUC and/or Cmax (i.e., within-subject variability $\geq$30%). For general information on this approach, please refer to Haidar et al., Bioequivalence Approaches for Highly Variable Drugs and Drug Products, Pharm. Res. 25:237-241(2008).

---

2. Type of study: Fed
   Design: Single-dose, two-way crossover *in-vivo*
   Strength: 1000 mg
   Subjects: Healthy males and nonpregnant females, general population.
   Additional comments: See above

---

3. Type of study: Fasting
   Design: Single-dose, two-way crossover *in-vivo*
   Strength: 750 mg
   Subjects: Healthy males and nonpregnant females, general population.
   Additional comments: See above.

Analytes to measure (in appropriate biological fluid): Niacin and its metabolite nicotinuric acid in plasma.

Bioequivalence based on (90% CI): Niacin.

If niacin cannot be reliably measured, a confidence interval approach for bioequivalence determination should be used for nicotinuric acid.

Waiver request of in-vivo testing: 500 mg based on (i) acceptable bioequivalence studies on the 1000 mg strength, (ii) proportionally similarity of the formulations across all strengths, and (iii) acceptable in vitro dissolution testing of all strengths.

Dissolution test method and sampling times:

Please note that a **Dissolution Methods Database** is available to the public at the OGD website at http://www.accessdata.fda.gov/scripts/cder/dissolution/. Please find the dissolution information for this product at this website. Please conduct comparative dissolution testing on 12 dosage units each of all strengths of the test and reference products. Specifications will be determined upon review of the application.

For modified release products, dissolution profiles generated using USP Apparatus I at 100 rpm and/or Apparatus II at 50 rpm in at least three dissolution media (pH 1.2, 4.5 and 6.8 buffer, water) should be submitted in the application. Agitation speeds may have to be increased if appropriate. It is acceptable to add a small amount of surfactant, if necessary. The following sampling times are recommended: 1, 2, and 4 hours and every 2 hours thereafter, until at least 80% of the drug is dissolved. Comparative dissolution profiles should include individual tablet data as well as the mean, range, and standard deviation at each time point for twelve tablets. Specifications will be determined upon review of the data submitted in the application.

II. COMMENTS:

1. There is no USP method for this product but there is an FDA-recommended method. The firm's dissolution testing data with the FDA-recommended method are acceptable. However, the firm's proposed specifications are not acceptable. Based on the submitted data, the DBE recommends the following specifications:

1 Hr: NMT (b)(4)%
3 Hrs: (b)(4)%
6 Hrs: %
9 Hrs: %
12 Hrs: (b)(4)%
20 Hrs: NLT (b)(4)%

The firm will be requested to acknowledge the above specifications.

2. The firm also conducted dissolution testing in three different dissolution media (0.1 N HCl, pH 4.5 Acetate Buffer, and pH 6.8 Phosphate Buffer). Results of f_2 values are provided below.

% RELEASE								
Time (Hrs)	0.1N HCl		4.5 pH buffer		Water		6.8 pH buffer	
	GK91007 (500mg)	GK91008 (1000 mg)	GK91007 (500mg)	GK91008 (1000 mg)	GK91007 (500mg)	GK91008 (1000 mg)	GK91007 (500mg)	GK91008 (1000 mg)

f2	**65.82**		**65.62**		**70.29**		**60.26**	

Note: The dissolution test using water is the regulatory method.

Reviewer comments on f_2: All f_2 values are acceptable (above 50).

III. DEFICIENCY COMMENTS:

1. Based on the submitted data, the firm should acknowledge the following specifications:

1 Hr: NMT [redacted]%
3 Hrs: [redacted]%
6 Hrs: [redacted]%
9 Hrs: [redacted]%
12 Hrs: [redacted]%
20 Hrs: NLT [redacted]%

2. The firm did not provide the long term stability (LTS) data of niacin in frozen plasma samples. The firm is requested to submit LTS data for at least 111 days to cover the entire length of the maximum storage duration of the BE study samples (i.e., from the time when the first blood sample was drawn until the time when the last plasma sample was analyzed).

IV. RECOMMENDATIONS:

The in vitro dissolution testing conducted by Sun Pharma Global FZE on its test product, Niacin Extended-Release Tablets, 500 mg and 1000 mg comparing it to Niaspan® Tablets, 500 mg, and 1000 mg, manufactured by Abbott is incomplete for the reason given in deficiency comment #1.

BIOEQUIVALENCE DEFICIENCIES

APPLICANT:	Sun Pharma Global FZE
DRUG PRODUCT:	Niacin Extended-Release Tablets, 500 mg and 1000 mg

The Division of Bioequivalence (DBE) has completed its review of the dissolution testing portion of the submission acknowledged on the cover sheet. The review of the bioequivalence studies and the waiver request will be conducted later. The following deficiencies have been identified:

1. Your dissolution testing data are acceptable. However, your proposed dissolution specifications are not acceptable. Based on the submitted data, please acknowledge your acceptance of the following FDA-recommended method and specifications:

Medium:	Water
Volume:	900 mL
Apparatus:	I (basket)
Speed:	100 rpm
Sampling Times:	1, 3, 6, 9, 20 and 20 hours
Specifications:	1 Hr: NMT (b) (4)%
	3 Hrs: (b) (4)%
	6 Hrs: %
	9 Hrs: %
	12 Hrs: %
	20 Hrs: NLT (b) (4)%

2. You have not provided the long term stability (LTS) data of niacin in frozen plasma samples. Please provide LTS data for at least 111 days to cover the entire length of the maximum storage duration of the Bioequivalence study samples (i.e., from the time when the first blood sample was drawn until the time when the last plasma sample was analyzed).

Sincerely yours,

{See appended electronic signature page}

Dale P. Conner, Pharm.D.
Director, Division of Bioequivalence I

SUBJECT: Review of EIR Covering ANDA 200-484, Niacin Extended-Release Tablets, 500 mg and 1000 mg from Sun Pharma Global FZE, United Arab Emirates

At the request of the Division of Bioequivalence (DBE), the Division of Scientific Investigations (DSI) audited clinical portions of the following bioequivalence (BE) studies:

PKD_09_277: "A Randomized, Open Label, Two Treatment, Four Period, Two Sequence, Single Dose, Replicated Crossover, Bioequivalence Study of Niacin 1000 mg Extended Release Tablets of Sun Pharmaceutical Industries Limited, India and NIASPAN® (Niacin) 1000 mg Extended Release Tablets of Abbott Laboratories, North Chicago, IL 60064 USA, In 36 Healthy Human Adult Subjects, Under Fasting Conditions"

PKD_09_278: "A Randomized, Open Label, Two Treatment, Four Period, Two Sequence, Single Dose, Replicated Crossover, Bioequivalence Study of Niacin 1000 mg Extended Release Tablets of Sun Pharmaceutical Industries Limited, India and NIASPAN® (Niacin) 1000 mg Extended Release Tablets of Abbott Laboratories, North Chicago, IL 60064 USA, In 36 Healthy Human Adult Subjects, Under Fed Conditions"

Inspection of clinical portions was conducted at **Sun Pharmaceutical Industries Ltd., Tandalja, Vadodara 390 020, India**. Following the inspection (October 25-29, 2010), No Form FDA-483 was issued and no significant findings were uncovered during the inspection.

Conclusion:

Following the inspection, DSI recommends that the clinical portions of studies PKD_09_277 and PKD_09_278 be accepted for review.

After you have reviewed this transmittal memo, please append it to the original ANDA submission.

Comments:ANDA previously TA'd on 6/10/2013. At the time the TA was issued the reason cited for TA was an unexpired 30 month stay of approval. This stay of approval was a second 30 month stay that resulted from the sponsor's change in certifications from PIII to PIV on the '930, '715, '967, '691, '229 and '848 patents. There had been an earlier 30 month stay related to suit on the '428 and '035 patents but this stay expired on 7/5/2012. The CA related to the '930, '715, '967, '691, '229 and '848 patents will expire on 4/20/2014. However, since each of these 6 patents has expired there can be no 30 month stay once the patent expires. The remaining unexpired patents which protect Niacin are the '428(exp. 5/27/2017) and the '035(exp. 3/15/2018).

Sponsor submitted a request for Final Approval on 3/21/2014 in which they assert they are eligible for Full Approval once 180 day exclusivity expires on 3/20/2014. In March of 2013, Sun submitted a copy of an Order-Stipulated Dismissal without Prejudice in the D of DE for CA 10 CV 0112. This is the CA that was originally filed against Sun for infringement of the '428 and '035 patents.

This ANDA is eligible for Full Approval as the CA pertaining to the only two remaining unexpired patents-the '428 and '035-was dismissed, all other patents have expired and the 180 day exclusivity granted to Barr's ANDA 76378 expired on 3/19/2014.

ANDA is eligible for Full Approval.

Subject: FW: Please endorse ANDAs 200484 and 201273 for final approval--Div 4/ Team 43

Good morning Bui,

There are no changes for the labeling of ANDA 200484 AND 201273.

Letter:
ANDA 200484:

- In the address line add the following as the second line “U.S. Agent for Sun Pharma Global FZE”.
- Revise the established name by using lower case “r” in “release”.

ANDA 201273:

- In the address line revise “US Agent…” to read “U. S. Agent…”
- Revise the established name by using lower case “r” in “release”.

Thanks,

Betty

Hi Betty and Ruby,

These ANDAs are ready for final approval.
Would you please provide labeling endorsement.

Thank you so much!
Have a great weekend!
Anh

Press Release Acceptable ☐
Date PETS checked for first generic drug _____

Comments: This ANDA was granted tentative approval on June 10, 2013. Final approval was blocked at that time by the 30-month stay of approval associated with ongoing patent litigation. Refer to the administrative summary prepared at the time of the tentative approval. Since the tentative approval, all patents except for the '428 and '035 patents have expired. Litigation with regard to the '428 and '035 patents was dismissed. This dismissal removed the legal barrier to approval of this ANDA.

Final-printed labeling (FPL) found acceptable for approval /11/14, as endorsed 4/14/14. No REMS is required.

CMC remains acceptable for approval - as endorsed 4/15/14 (above).

Press Release Acceptable ☐
Date PETS checked for first generic drug _____

Comments: Acceptable EES dated 12/11/13 (Verified 4/17/14). No "OAI" Alerts noted.

Of the patents currently listed in the "Orange Book", only two patents - the '428 and the '035 - remain unexpired. Sun Pharma Global provided a paragraph IV certification to each of those patents and was sued within the 45-day period. All litigation with respect to these patents was subsequently dismissed. There is no exclusivity currently listed in the "Orange Book" for this drug product.

No applicant is currently entitled to 180-day generic drug exclusivity for this drug product.

This ANDA is the "sister" ANDA to Sun Pharma Global's ANDA 201273 for the 750 mg strength of this drug product.

This ANDA is recommended for approval.

ATTN: Kalpana R. Vanam

FAX: (609) 495-2711

FDA CONTACT PHONE: (240) 276-9613

FROM: Yen Anh Bui

Dear Sir or Madam:

This communication is in reference to your abbreviated new drug application (ANDA) dated February 8, 2010, submitted pursuant to Section 505(j) of the Federal Food, Drug, and Cosmetic Act for Niacin Extended-release Tablets USP, 500 mg and 1000 mg.

Reference also made to your amendment dated March 21, 2014.

The deficiencies presented below represent *EASILY CORRECTABLE DEFICIENCIES* identified during the review and the current review cycle will remain open. You should provide a complete response to these deficiencies within ten (10) U.S. business days.

Prominently identify the submission with the following wording in bold capital letters at the top of the first page of the submission:

EASILY CORRECTABLE DEFICIENCY
LABELING

If you do not submit a complete response within ten (10) U.S. business days, the review will be closed and the listed deficiencies will be incorporated in the next COMPLETE RESPONSE. Please provide your response after that complete response communication is received along with your response to any other issued comments.

If you are unable to submit a complete response within ten (10) U.S. business days, please contact the Regulatory Project Manager immediately so a complete response may be issued if appropriate.

Please submit official archival copies of your response to the ANDA, facsimile or e-mail responses will not be accepted. A partial response to this communication will not be processed as an amendment and will not start a review.

If you have questions regarding these deficiencies please contact the Regulatory Project Manager, Yen Anh Bui at (240) 276-9613.

We have completed our review, as amended, and have the following comments:

LABELING:

Labeling Deficiencies determined on March 26, 2014, based on your submission dated March 21, 2014.

1. GENERAL COMMENT:

   Does your product meet the USP dissolution test? If your product does not meet the USP dissolution test, please add the disclaimer "USP Dissolution Test Pending" to the end of the DESCRIPTION section in your insert labeling.

2. CONTAINER:

   a. We note that the labels submitted in the amendment dated March 21, 2014, contains a logo for the distributor and a logo for the manufacturer. The labels submitted November 21, 2011, contained only the manufacturer's logo. Please comment.

   b. We encourage you to revise the established name to read "Niacin Extended-release Tablets, USP" [use lower case "r" in "release"]. Please note that this deficiency is annual reportable.

3. INSERT:

   a. WARNINGS AND PRECAUTIONS, Mortality and Coronary Heart Disease Morbidity: Replace "niacin" with "niacin extended-release" except in the section of the sentence as follows. "…or matching placebo (IR Niacin, 100 to 150 mg, n = 1696)."

   b. ADVERSE REACTIONS, Clinical Studies Experience: In the last paragraph that begins with "In AIM-HIGH involving 3, 414 patients…" replace "niacin" with "niacin extended-release" except in the section of the sentence as follows. "…or matching placebo (IR Niacin, 100 mg to 150 mg, n = 1696)."

   c. Please refer to container comment 2(a).

4. PATIENT INFORMATION LEAFLET:

   Please refer to container comment 2(a).

Submit your revised labeling electronically in final print format.

To facilitate review of your next submission, please provide a side-by-side comparison of your proposed labeling with your last submitted labeling with all differences annotated and explained.

Prior to the submission of your amendment, please check labeling resources, including DRUGS@FDA, the Electronic Orange Book and the NF-USP online, for recent updates and make any necessary revisions to your labels and labeling.

In order to keep ANDA labeling current, we suggest that you subscribe to the daily or weekly updates of new documents posted on the CDER web site at the following address - http://service.govdelivery.com/service/subscribe.html?code=USFDA_17.

Sincerely yours,

{See appended electronic signature page}

ANDA ack for filing for the 500 mg and 1 g strengths with a PIV on 9/30/2009 (LO dated 12/16/2009). Patent Amendment rec'd on 1/5/2010-PIV to '428, '035 PIII to '930, '715, '967, '691, '229, '848. Patent Amendment rec'd on 1/14/2010-notice sent via (b) (4) to Abbott Labs in Abbott Park, IL with notice delivered on 1/5/2010. Patent Amendment rec'd on 4/28/2010- CA 10 CV 0112 filed in the D of DE on 2/12/2010 for infringement of the '428 and '035 patents, since suit was filed within 45 days there was an automatic 30 month stay of approval which expired on 7/5/2012. Patent Amendment rec'd on 1/11/2011-restatement of certs to address change in patent exp. of the '229 patent which now expires on 9/20/13, certifications are the same as the 1/5/2010 amendment. Patent Amendment rec'd on 9/27/2011-split PIV/section viii for the '035 and PIII cert to newly listed '506 patent. Patent Amendment rec'd on 10/21/2011-change from PIII to PIV on the '930, '715, '967, '691, '229, '848, and '506. Patent Amendment rec'd on 10/24/2011-notice sent via (b) (4) (b) (4) to Abbott Labs in Abbott Park IL with notice delivered on 10/20/2011. Patent Amendment rec'd on 12/20/2011-changed back to PIV cert on the '035 patent (previously split PIV/section viii). '428-PIV orig, sued, 30 month exp. 7/5/12 '930-PIV 10/21/11 amend-sued within 45 days, 30 month exp. 4/20/2014 '715-PIV 10/21/11 amend-sued within 45 days, 30 month exp. 4/20/2014 '035-PIV orig, sued, 30 month exp. 7/5/12 '967-PIV 10/21/11 amend-sued within 45 days, 30 month exp. 4/20/2014 '691-PIV 10/21/11 amend-sued within 45 days, 30 month exp. 4/20/2014	

'229-PIV 10/21/2011 amend-sued within 45 days, 30 month exp. 4/20/2014
'848-PIV 10/21/2011 amend-sued within 45 days, 30 month exp. 4/20/2014
'506-PIV 10/21/2011 amend-not sued
Sun's US Agent contacted via e-mail on 1/16/13 for additional patent information.
Patent Amendment rec'd on 1/22/2013-suit filed in the D of DE, CA # 11 CV 1190 on 12/2/2011 for infringement of the '930, '715, '967, '691, '229, and '848 patents, cover letter of the amendment indicates that litigation remains ongoing.
A 30 month stay applies to the suit filed against Sun on 12/2/2011 as each of the 6 patents for which Sun was sued were listed in the OB at the time Sun submitted their ANDA. It is noted that Sun's original application contained PIV certs to these patents but Sun amended their ANDA to provide for PIII certs prior to submitting notice-amendment for PIII certs rec'd on 1/5/2010, notice for PIV sent on 1/14/2010. 30 month stay related to the '428 patent has expired.

Language in TA letter should indicated that 1st 30 month stay associated with the '428 expired on 7/5/2012 but there is a second 30 month stay associated with the 6 patents noted above which has not yet expired.

Comments: Refer to the comments above by M. Shimer pertaining to the regulatory and legal history of this ANDA. Sun Pharma Global provided paragraph IV certifications to each of the listed patents and was sued on each patent (except not sued on the '506 patent). The 30-month statutory hold with respect to the '428 and '035 patents expired on July 5, 2012. The 30-month statutory hold with respect to the '930, '715, '967, '691, '229 and '848 patents will expire on April 20, 2014. There are no additional patents or exclusivity currently listed in the "Orange Book" for this drug product.

Note: Barr's ANDA 76-250 (1,000 mg) and ANDA 76-378 (500 mg and 750 mg) for this drug product were approved On April 14, 2005 and April 26, 2005, respectively. Both are currently listed in the discontinued section of the "Orange Book".

This ANDA is recommended for tentative approval.

Turner, Betty

From: Turner, Betty
Sent: Wednesday, January 02, 2013 3:08 PM
To: 'Robert.Kurkiewicz@sunpharmausa.com'
Subject: ANDA 200484 Niacin Extended-Release Tablets

Dear Mr. Kurkiewicz,

The following are requested revisions from the review of your amendment dated May 8, 2012, for Niacin Extended-Release Tablets USP, 500 mg and 1000 mg. The revisions are "POST-APPROVAL" revisions and may be submitted as a Supplement-Changes Being Effected.

1. GENERAL COMMENT
   Please note this product is the subject of a USP monograph. We encourage you to add "USP" to your established name in the container and insert labeling.

2. CONTAINER
   Please note that the RLD uses the following colors for their product; 500 mg (blue); 750 mg (orange) and 1000 mg (green). We notice that you proposed the following colors for your product; (b) (4)

3. INSERT
   a. We encourage you to add "USP" in the Title, Dosage and Administration, Description and How Supplied sections.
   b. HIGHLIGHTS, ADVERSE EVENTS – Please revise the statement "To report SUSPECTED ADVERSE REACTIONS…" to include the manufacturer's name and phone number to be in accord with 21 CFR 201.57(a)(11)(ii).

   c. 12.3 Pharmacokinetics, Absorption

      Upon further review, please revise the second paragraph to read as follows.

      "Single-dose bioavailability studies have demonstrated that the 500 mg and 1000 mg tablet strengths are dosage form equivalent but the 500 mg and 750 mg tablet strengths are not dosage form equivalent."

Please contact me if you have questions.

Regards,
Betty

FDA CONTACT PHONE: (240) 276-8422

Dear Sir:

This facsimile is in reference to your abbreviated new drug application dated September 29, 2009, submitted pursuant to Section 505(j) of the Federal Food, Drug, and Cosmetic Act for Niacin Extended-release Tablets, 500 mg and 1000 mg.

Reference is also made to your amendment dated September 30, 2011.

The Division of Chemistry has completed its review of the submission(s) referenced above and has identified deficiencies which are presented on the attached ____ pages. This facsimile is to be regarded as an official FDA communication and unless requested, a hard copy will not be mailed.

Your amendment should respond to all of the deficiencies listed. **Facsimiles or partial replies will not be considered for review**, nor will the review clock be reactivated until all deficiencies have been addressed. The response to this facsimile will be considered to represent a MINOR AMENDMENT and will be reviewed according to current OGD policies and procedures. Your cover letter should clearly indicate that the response is a ***QUALITY MINOR AMENDMENT*** and should appear prominently in your cover letter.

We also request that you include a copy of this communication with your response. Please direct any questions concerning this communication to the project manager identified above.

SPECIAL INSTRUCTIONS:

*Effective **01-Aug-2010**, the new mailing address for Abbreviated New Drug Application (ANDA) Regulatory Documents will be:*

Office of Generic Drugs, CDER, FDA
Document Control Room, Metro Park North VII
7620 Standish Place
Rockville, Maryland 20855

All ANDA documents will only be accepted at the new mailing address listed above. For further information, please refer to the following websites prior to submitting your ANDA Regulatory documents: Office of Generic Drugs (OGD): http://www.fda.gov/cder/ogd or Federal Register: http://www.gpoaccess.gov/fr/

ANDA: 200848 **APPLICANT: Sun Pharmaceutical Industries, Inc.**

DRUG PRODUCT: Niacin Extended-release Tablets, 500 mg and 1000 mg

A. The deficiencies presented below represent MINOR deficiencies.

1. (b) (4)

2.

B. In addition to responding to the deficiencies presented above, please note and acknowledge the following comments in your response:

1. The Drug Master File# (b) (4) is currently inadequate. The DMF holder has been notified. Please do not respond to this letter until the DMF holder has responded to the deficiencies. Please also make any applicable changes to the drug substance specifications based on consultation with DMF holder and provide the revised specifications and certificate of analysis.

2. Please provide updated long-term stability data if available.

Sincerely yours,

{See appended electronic signature page}

REVIEW OF PROFESSIONAL LABELING
DIVISION OF LABELING AND PROGRAM SUPPORT
LABELING REVIEW BRANCH

ANDA Number: 200484 Date of Submission: November 21, 2011

Applicant's Name: Sun Pharma Global FZE

Established Name: Niacin Extended-Release Tablets 500 mg and 1000 mg

---

Labeling Deficiencies:

1. **CONTAINER** (30s, 90s, 100s and 1000s)

   We encourage you to add “Pharmacist: dispense with patient package insert” to the principal display panel.

2. **PACKAGE INSERT**

   You may not “carve out” the indication “In combination with simvastatin and lovastatin...”. According to the electronic Orange Book, the ‘035 patent does not have the use code associated with this indication. You may only file a “viii” to the use codes listed in the Orange Book. Please contact the Regulatory Support Staff for further information about patent certifications.

   Please revise your labeling accordingly.

Submit labels and labeling electronically.

Prior to approval, it may be necessary to revise your labeling subsequent to approved changes for the reference listed drug. In order to keep ANDA labeling current, we suggest that you subscribe to the daily or weekly updates of new documents posted on the CDER web site at the following address - http://service.govdelivery.com/service/subscribe.html?code=USFDA_17

To facilitate review of your next submission please provide a side-by-side comparison of your proposed labeling with the last labeling submission with all differences annotated and explained.

Sincerely Yours,

{See appended electronic signature page}

Vu, Thuyanh (Ann)

From: Vu, Thuyanh (Ann)
Sent: Wednesday, July 20, 2011 1:42 PM
To: 'Anne.Toland@sunpharmausa.com'
Subject: 201273 and 200484 (niacin extended-release tablets)

Ms. Toland,

Because your firm did not perform bioavailability studies on the dosage form equivalence of the 500 mg and 1000 mg tablet strengths, please revise:

"Single-dose bioavailability studies have demonstrated that the 500 mg and 1000 mg tablet strengths are dosage form equivalent but the 500 mg and 750 mg tablet strengths are not dosage form equivalent" to

(b) (4)

This text is located in subsection 12.3 Pharmacokinetics, Absorption. Please submit this revision in your next labeling amendment.

Thanks
Ann

FROM: Mark Gonitzke FDA CONTACT PHONE: (240) 276-8422

Dear Madam:

This facsimile is in reference to your abbreviated new drug application dated September 29, 2009, submitted pursuant to Section 505(j) of the Federal Food, Drug, and Cosmetic Act for Niacin Extended-release Tablets, 500 mg and 1000 mg.

The Division of Chemistry has completed its review of the submission(s) referenced above and has identified deficiencies which are presented on the attached **2** pages. This facsimile is to be regarded as an official FDA communication and unless requested, a hard copy will not be mailed.

Your amendment should respond to all of the deficiencies listed. **Facsimiles or partial replies will not be considered for review**, nor will the review clock be reactivated until all deficiencies have been addressed. The response to this facsimile will be considered to represent a MINOR AMENDMENT and will be reviewed according to current OGD policies and procedures. Your cover letter should clearly indicate that the response is a ***QUALITY MINOR AMENDMENT*** and should appear prominently in your cover letter.

We also request that you include a copy of this communication with your response. Please direct any questions concerning this communication to the project manager identified above.

SPECIAL INSTRUCTIONS:

*Effective **01-Aug-2010**, the new mailing address for Abbreviated New Drug Application (ANDA) Regulatory Documents will be:*

Office of Generic Drugs, CDER, FDA
Document Control Room, Metro Park North VII
7620 Standish Place
Rockville, Maryland 20855

All ANDA documents will only be accepted at the new mailing address listed above. For further information, please refer to the following websites prior to submitting your ANDA Regulatory documents: Office of Generic Drugs (OGD): http://www.fda.gov/cder/ogd or Federal Register: http://www.gpoaccess.gov/fr/

Subject: Request for Approval to Rely on (b) (4) As Proof of Delivery (ANDA No. 20-484 for Niacin ER tablets)

Dear Mr. Shimer,

I am Chief Patent Counsel for Sun Pharmaceutical Industries, Inc.. I am writing on behalf of Sun in connection with its ANDA No. 20 0484 for a drug product named Niacin Extended-release Tablets, 500 mg and 1000 mg.

I am writing to request permission to use and rely on overnight courier services in lieu of the U.S. Postal Service certified mail, return receipt delivery service for purposes of providing notice to the NDA holder and any patent assignees associated with Paragraph IV certifications contained within the aforementioned ANDA. More specifically, we request permission to use and rely on (b) (4) as proof of delivery of a notice letter directed to Abbott Laboratories in Abbott Park, IL, U.S.A. (NDA holder and patent owner). Please let me know whether Sun can rely on (b) (4) for purposes of demonstrating delivery of the notice letter.

If you have any questions, then please let me know.

Best regards,
John

BIOEQUIVALENCE AMENDMENT

ANDA 200484

OFFICE OF GENERIC DRUGS, CDER, FDA
Document Control Room, Metro Park North II
7500 Standish Place, Room 150
Rockville, MD 20855-2773
(240-276-9327)

APPLICANT: Sun Pharma Global FZE

TEL: 609-495-2823

ATTN: Anne Toland

FAX: 609-495-2711

FROM: Diana Solana-Sodeinde

FDA CONTACT PHONE: (240) 276-8782

Dear Madam:

This facsimile is in reference to the bioequivalence data submitted on September 30, 2009, pursuant to Section 505(j) of the Federal Food, Drug, and Cosmetic Act for Niacin Extended-Release tablets, 500 and 1000 mg.

Reference is also made to your amendments dated May 26, 2010 and September 6, 2010.

The Division of Bioequivalence has completed its review of the submissions referenced above and has identified deficiencies which are presented on the attached 2 pages. This facsimile is to be regarded as an official FDA communication and unless requested, a hard-copy will not be mailed.

You should submit a response to these deficiencies in accord with 21 CFR 314.96. Your amendment should respond to all the deficiencies listed. **Facsimiles or partial replies will not be considered for review.** Your cover letter should clearly indicate:

Bioequivalence Response to Information Request

If applicable, please clearly identify any new studies (i.e., fasting, fed, multiple dose, dissolution data, waiver or dissolution waiver) that might be included for each strength. We also request that you include a copy of this **communication with your response.**
Please submit a copy of your amendment in an archival (blue) jacket and unless submitted electronically through the gateway, a review (orange) jacket. Please direct any questions concerning this communication to the project manager identified above.

Please remember that when changes are requested to your proposed dissolution methods and/or specifications by the Division of Bioequivalence, an amendment to the Division of Chemistry should also be submitted to revise the release and stability specification. We also recommend that supportive dissolution data or scientific justification be provided in the CMC submission to demonstrate that the revised dissolution specification will be met over the shelf life of the drug product.

SPECIAL INSTRUCTIONS:

*Effective **01-Aug-2010**, the new mailing address for Abbreviated New Drug Application (ANDA) Regulatory Documents is:*

Office of Generic Drugs
Document Control Room, Metro Park North VII
7620 Standish Place
Rockville, Maryland 20855-2810

ANDAs will only be accepted at the new mailing address listed above. For further information, please refer to the following websites prior to submitting your ANDA Regulatory documents: Office of Generic Drugs (OGD): http://www.fda.gov/cder/ogd or Federal Register: http://www.gpoaccess.gov/fr/

Please submit your response in electronic format. This will improve document availability to review staff.

ANDA: 200484

APPLICANT: Sun Pharma Global

DRUG PRODUCT: Niacin Extended-Release Tablets, 500 mg and 1000 mg

The Division of Bioequivalence (DBE) has completed its review and has identified the following deficiencies:

1. For the Fasted Study, No. PKD_09_277, sample reanalysis was conducted for Niacin and Nicotinuric Acid for all samples pertaining to subject 16. You indicated that the sample reanalysis was conducted due to suspected "sample mix up" (Code J). Please provide an adequate and detailed explanation as to why you believed the samples were mixed up. In addition, please provide a summary table listing the original assayed values, the reassayed values and the reported values for this subject.

2. For the Fasted Study, Study No. PKD_09_277, all samples for subjects 8, 16, 17, and 22 were reassayed for Niacin and Nicotinuric Acid due to "rejected analytical run" (code J). In addition, for Fed Study, Study No. PKD_09_278, the entire subject samples for subject 28 (niacin and nicotinuric acid samples) and subject 13 (nicotinuric acid samples) were reanalyzed due to "rejected analytical run" (code J).

   There are several criteria outlined in Section 7.1.9 of the Standard Operating Procedure (SOP) PKD/S/019 Revision 03, entitled Sample Reanalysis and Reporting of Final Concentrations, detailing how samples can be classified as "rejected analytical runs." As required in section 7.1.9.3 of this SOP, for each subject reanalysis, please submit documentation of the "*investigated and detailed justification of the reanalysis of the batch [form-Attachment-3]".*

   In addition, please submit in tabular format, a complete list of original assay values, repeat assay values and reported values of these subjects for evaluation. For each subject, please clearly justify why the original or reassayed value was reported.

3. The DBE identified several instances where you did not follow the standard operating procedure (SOP) PKD/S/019, Sample Reanalysis and Reporting of Final Concentrations, for reassay performed due to "inconsistent profiles (code H)". An example of this can be seen in Study #PKD_09_277 for nicotinuric acid for subject 23 period 3 at 9 hours. The initial assay (145.6 ng/mL) did not differ by greater than 100% from the previous sample (106.0 ng/mL) or the subsequent sample (95.3 ng/mL). Another example is seen Study PKD_09_277 for nicotinuric acid for subject 23 period 4 at 5 hours. The plasma concentration for nicotinuric acid for subject 23 at 4 and 5 hours in period 4 was 942.6 ng/mL (reassayed 1174.7 ng/mL) and 126.8 ng/mL, respectively. The plasma concentration at Hour-5 differed from that of Hour-4 by greater than 100% but you did not reassay this sample as you did for other samples. Please submit the following:

   a) A summary table (Table 1) detailing all reassays that were performed correctly according to section 7.1.7 of SOP PKD/S/019;

b) A summary table (Table 2) detailing all reassays that were performed incorrectly according to section 7.1.7 of SOP PKD/S/019; and
c) SAS-Transport formatted files containing the original assay data for all samples identified in Table 2. Tables 1 and 2 should contain all pertinent information including the initial value, the reassayed value, and the final reported value for each reassayed sample.

In addition, section 7.1.7.5 (Result of sample repeated as PK inconsistent profile) is extremely unclear as to how reanalysis was performed for samples coded "N". Please provide concrete examples of how the decision was made to perform reanalysis and report the final value for reassays coded as "N".

4. SOP No. PKD/S/019 Revision 03 became effective after the study sample analyses were completed. Therefore, please provide a copy of the SOP that was effective at the time of analysis and please outline the changes made to the SOP between revision 2 and revision 3. Also, please indicate which revision of the SOP was effective at the time of the study. If PKD/S/019 Revision 2 was the only version of this SOP effective at the time of the study, please submit a copy of this SOP version.

5. SOP No. PKD/S/033, Chromatographic Analysis of Study Sample was referenced in SOP No. PKD/S/019 revision 3 but was not included in the application. Please submit a full copy of SOP PKD/S/033 which was effective during the study sample analysis periods.

6. Two concentration ranges for calibration curves (CC) [i.e., 29.5, 58.9, 149.3, 345.7, 903.7, 1296.3, 1517.3 & 1964.1 (ng/ml) and 29.6, 59.2, 149.9, 347.1, 907.1, 1301.5, 1577.6 and 1972.0 (ng/ml)] were used for bioanalysis of nicotinuric acid samples in the Fasted Study (Study No. PKD_09_277). Please provide an explanation as to why you used two different CC concentration ranges. In addition, for each CC concentration range used, please specify all subject samples that were analyzed using such range.

Sincerely yours,

DRUG PRODUCT:	Niacin Extended-Release Tablets, 500 mg and 1000 mg

The Division of Bioequivalence (DBE) has completed its review of the dissolution testing portion of the submission acknowledged on the cover sheet. The review of the bioequivalence studies and the waiver request will be conducted later. The following deficiencies have been identified:

1. Your dissolution testing data are acceptable. However, your proposed dissolution specifications are not acceptable. Based on the submitted data, please acknowledge your acceptance of the following FDA-recommended method and specifications:

Medium:	Water
Volume:	900 mL
Apparatus:	I (basket)
Speed:	100 rpm
Sampling Times:	1, 3, 6, 9, 12 and 20 hours
Specifications:	1 Hr: NMT (b) (4) %
	3 Hrs: (b) (4) %
	6 Hrs: %
	9 Hrs: %
	12 Hrs: %
	20 Hrs: NLT (b) (4) %

2. You have not provided the long term stability (LTS) data of niacin in frozen plasma samples. Please provide LTS data for at least 111 days to cover the entire length of the maximum storage duration of the Bioequivalence study samples (i.e. from the time when the first blood sample was drawn until the time when the last plasma sample was analyzed).

Sincerely yours,

Labeling Comments

REVIEW OF PROFESSIONAL LABELING
DIVISION OF LABELING AND PROGRAM SUPPORT
LABELING REVIEW BRANCH

ANDA Number: 200-484 Date of Submission: September 29, 2009

Applicant's Name: Sun Pharma Global FZE

Established Name: Niacin Extended-Release Tablets 500 mg and 1000 mg

---

Labeling Deficiencies:

1. **CONTAINER** (30s, 100s and 1000s)

(b) (4)

2. **PACKAGE INSERT**

   a. GENERAL COMMENT

      Please note that the established name is "niacin extended release". There are many instances in the insert that you replaced "Niaspan" with "niacin" instead of "niacin extended release". This is especially glaring in the section 14.4 where the insert specified a combination tablet of niacin extended release and simvastatin. Please revise accordingly.

   b. HIGHLIGHTS, ADVERSE REACTIONS:

      We note that you did not state your contact number for patients to report adverse reactions. Please provide your contact number.

   c. 6.1 Clinical Studies Experience

      Second paragraph, second sentence, add "burning sensation/skin burning sensation" between "sweating" and "chills".

   d. 6.2 Postmarketing Experience

      Third paragraph, add "burning sensation/skin burning sensation" between "sweating" and "skin discoloration"

Submit labels and labeling electronically according to the guidance for industry titled Providing Regulatory Submissions in Electronic Format – ANDA.

Prior to approval, it may be necessary to revise your labeling subsequent to approved changes for the reference listed drug. In order to keep ANDA labeling current, we suggest that you subscribe to the daily or weekly updates of new documents posted on the CDER web site at the following address - http://service.govdelivery.com/service/subscribe.html?code=USFDA_17

To facilitate review of your next submission please provide a side-by-side comparison of your proposed labeling with the last labeling submission with all differences annotated and explained.

Sincerely Yours,

ANDA 200484

Sun Pharmaceutical Industries, Inc.
US Agent for Sun Pharma Global FZE
Attention: Anne Toland
270 Prospect Plains Road
Cranbury, NJ 08512

Dear Madam:

We acknowledge the receipt of your abbreviated new drug application submitted pursuant to Section 505(j) of the Federal Food, Drug and Cosmetic Act.

Reference is also made to the telephone conversation dated December 3, 2009 and your correspondence dated December 8, 2009.

NAME OF DRUG: Niacin Extended-release Tablets, 500 mg and 1000 mg

DATE OF APPLICATION: September 28, 2009

DATE (RECEIVED) ACCEPTABLE FOR FILING: September 30, 2009

You have filed a Paragraph IV patent certification, in accordance with 21 CFR 314.94(a)(12)(i)(A)(4) and Section 505(j)(2)(A)(vii)(IV) of the Act. Please be aware that you need to comply with the notice requirements, as outlined below. In order to facilitate review of this application, we suggest that you follow the outlined procedures below:

CONTENTS OF THE NOTICE

You must cite section 505(j)(2)(B)(ii) of the Act in the notice and should include, but not be limited to, the information as described in 21 CFR 314.95(c).

SENDING THE NOTICE

In accordance with 21 CFR 314.95(a):

- Send notice by U.S. registered or certified mail with return receipt requested to each of the following:

  1) Each owner of the patent or the representative designated by the owner to receive the notice;

  2) The holder of the approved application under section 505(b) of the Act for the listed drug claimed by the

patent and for which the applicant is seeking approval.

3) An applicant may rely on another form of documentation only if FDA has agreed to such documentation in advance.

DOCUMENTATION OF NOTIFICATION/RECEIPT OF NOTICE

You must submit an amendment to this application with the following:

- In accordance with 21 CFR 314.95(b), provide a statement certifying that the notice has been provided to each person identified under 314.95(a) and that notice met the content requirements under 314.95(c).

- In accordance with 21 CFR 314.95(e), provide documentation of receipt of notice by providing a copy of the return receipt or a letter acknowledging receipt by each person provided the notice.

- A designation on the exterior of the envelope and above the body of the cover letter should clearly state "PATENT AMENDMENT". This amendment should be submitted to your application as soon as documentation of receipt by the patent owner and patent holder is received.

DOCUMENTATION OF LITIGATION/SETTLEMENT OUTCOME

You are requested to submit an amendment to this application that is plainly marked on the cover sheet "PATENT AMENDMENT" with the following:

- If litigation occurs within the 45-day period as provided for in section 505(j)(4)(B)(iii) of the Act, we ask that you provide a copy of the pertinent notification.

- Although 21 CFR 314.95(f) states that the FDA will presume the notice to be complete and sufficient, we ask that if you are not sued within the 45-day period, that you provide a letter immediately after the 45 day period elapses, stating that no legal action was taken by each person provided notice.

- You must submit a copy of a copy of a court order or judgment or a settlement agreement between the parties, whichever is applicable, or a licensing

agreement between you and the patent holder, or any other relevant information. We ask that this information be submitted promptly to the application.

If you have further questions you may contact Martin Shimer, Chief, Regulatory Support Branch, at (240) 276-8419.

We will correspond with you further after we have had the opportunity to review the application.

Please identify any communications concerning this application with the ANDA number shown above.

Should you have questions concerning this application, contact:

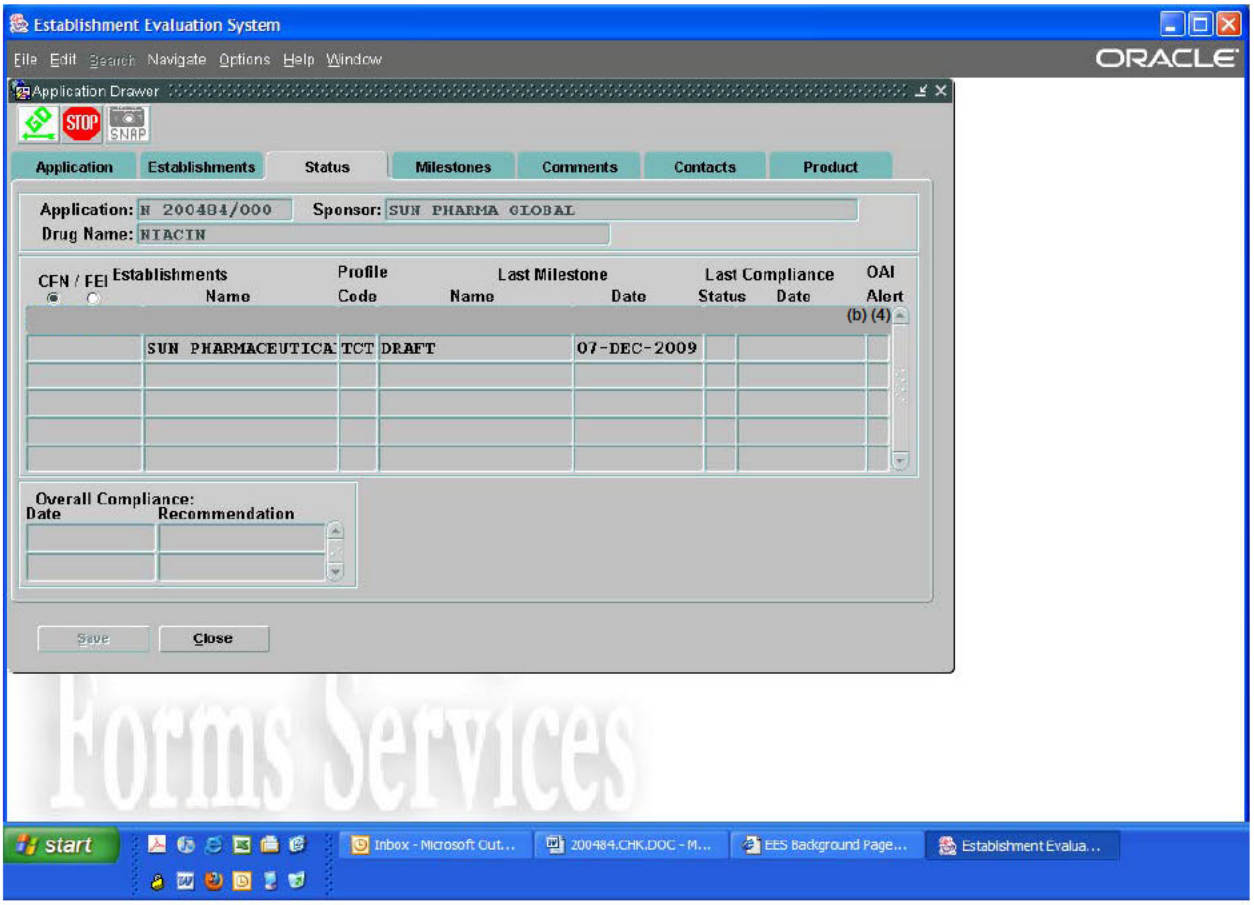
ADDITIONAL COMMENTS REGARDING THE ANDA: 609-495-2823 Anne Toland
1. submit qualitative breakdown of opadry II Pink. *ok*

Note: The BE studies measure niacin and its metabolite, nicotinuric acid. The studies pass based on the metabolite but do not pass based on the parent compound. We consider this a review issue. Niacin cannot always be reliably measured per the draft guidance on Niacin.



Contains Nonbinding Recommendations

Draft Guidance on Niacin

This draft guidance, once finalized, will represent the Food and Drug Administration's (FDA's) current thinking on this topic. It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. You can use an alternative approach if the approach satisfies the requirements of the applicable statutes and regulations. If you want to discuss an alternative approach, contact the Office of Generic Drugs.

Active ingredient: Niacin

Form/Route: Extended Release Tablets/Oral

Recommended studies: 3 studies

1. Type of study: Fasting
   Design: Single-dose, two-way crossover *in-vivo*
   Strength: 1000 mg
   Subjects: Healthy males and nonpregnant females, general population.

---

2. Type of study: Fed
   Design: Single-dose, two-way crossover *in-vivo*
   Strength: 1000 mg
   Subjects: Healthy males and nonpregnant females, general population.

---

3. Type of study: Fasting
   Design: Single-dose, two-way crossover *in-vivo*
   Strength: 750 mg
   Subjects: Healthy males and nonpregnant females, general population.

Analytes to measure (in appropriate biological fluid): Niacin and its metabolite nicotinuric acid in plasma.

Bioequivalence based on (90% CI): If niacin cannot be reliably measured, a confidence interval approach for bioequivalence determination should be used for nicotinuric acid.

Waiver request of in-vivo testing: 500 mg based on (i) acceptable bioequivalence studies on the 1000 mg strength, (ii) proportionally similar 500 mg formulations to the 1000 mg strength, and (iii) acceptable in vitro dissolution testing of all strengths.

Dissolution test method and sampling times:

Attention: E. Venu Madhav
Tandalja, Vadodara-390020
India

APR 06 2007

Reference Number: OGD #07-0039

Dear Mr. Madhav:

This letter is in response to your correspondence dated January 4, 2007. You request that the Office of Generic Drugs (OGD) provide bioequivalence recommendations regarding Niacin Extended Release Tablets, 500 mg, 750 mg and 1000 mg. OGD provides the following comments:

1. The following studies are recommended to establish bioequivalence of niacin extended-release tablets:

   a. Single-dose, fasting in-vivo bioequivalence studies comparing Niacin Extended-Release Tablets, 750 mg and 1000 mg to the respective strength of the reference listed drug (RLD) Niaspan® (Niacin) Extended-Release Tablets, 750 mg and 1000 mg. The RLD labeling states that single-dose bioavailability studies have demonstrated that the 500 mg and the 1000 mg *tablet strengths are dosage form equivalent, but the 500 mg and 750 mg* tablet strengths are not dosage form equivalent.

   b. A single-dose, fed *in-vivo* bioequivalence study comparing Niacin Extended-Release Tablets, 1000 mg, to the reference listed drug (RLD) Niaspan® (Niacin) Extended-Release Tablets.

2. Please measure both the parent compound, niacin, and its metabolite, nicotinuric acid, in plasma.

3. Niacin Extended-release Tablets, 500 mg, may be considered for a waiver of *in-vivo* bioequivalence testing based on (1) an acceptable bioequivalence study on the 1000 mg strength, (2) acceptable dissolution testing of the 500 mg and 1000 mg strengths, and (3) proportional similarity in the formulations of the 500 mg and 1000 mg strengths

5.2 Tabular Listing of All Clinical Studies 3

5.4	**Literature References**	☐
	Possible Study Types:	
Study Type	**IN-VIVO BE STUDY(IES) with PK ENDPOINTS** (i.e., fasting/fed/sprinkle) FASTING AND FED ON 1000 MG 1. Study(ies) meets BE criteria (90% CI of 80-125, C max, AUC) NO 2. EDR Email: Data Files Submitted: YES SENT TO EDR 3. In-Vitro Dissolution: YES	☐

Study Type	**IN-VIVO BE STUDY with CLINICAL ENDPOINTS** NO 1. Properly defined BE endpoints (eval. by Clinical Team) 2. Summary results meet BE criteria: 90% CI of the proportional difference in success rate between test and reference must be within (-0.20, +0.20) for a binary/dichotomous endpoint. For a continuous endpoint, the test/reference ratio of the mean result must be within (0.80, 1.25). 3. Summary results indicate superiority of active treatments (test & reference) over vehicle/placebo ($p<0.05$) (eval. by Clinical Team) 4. EDR Email: Data Files Submitted	☐
Study Type	**IN-VITRO BE STUDY(IES)** (i.e., in vitro binding assays) NO 1. Study(ies) meets BE criteria (90% CI of 80-125) 2. EDR Email: Data Files Submitted: 3. In-Vitro Dissolution:	☐
Study Type	**NASALLY ADMINISTERED DRUG PRODUCTS** 1. Solutions (Q1/Q2 sameness): a. In-Vitro Studies (Dose/Spray Content Uniformity, Droplet/Drug Particle Size Distrib., Spray Pattern, Plume Geometry, Priming & Repriming) 2. Suspensions (Q1/Q2 sameness): a. In-Vivo PK Study 1. Study(ies) meets BE Criteria (90% CI of 80-125, C max, AUC) 2. EDR Email: Data Files Submitted b. In-Vivo BE Study with Clinical End Points 1. Properly defined BE endpoints (eval. by Clinical Team) 2. Summary results meet BE criteria (90% CI within +/- 20% of 80-125) 3. Summary results indicate superiority of active treatments (test & reference) over vehicle/placebo ($p<0.05$) (eval. by Clinical Team) 4. EDR Email: Data Files Submitted c. In-Vitro Studies (Dose/Spray Content Uniformity, Droplet/Drug Particle Size Distrib., Spray Pattern, Plume Geometry, Priming & Repriming)	☐
Study Type	**IN-VIVO BE STUDY(IES) with PD ENDPOINTS** (e.g., topical corticosteroid vasoconstrictor studies) 1. Pilot Study (determination of ED50) 2. Pivotal Study (study meets BE criteria 90%CI of 80-125)	☐

Study Type	**TRANSDERMAL DELIVERY SYSTEMS** 1. In-Vivo PK Study 1. Study(ies) meet BE Criteria (90% CI of 80-125, C max, AUC) 2. In-Vitro Dissolution 3. EDR Email: Data Files Submitted 2. Adhesion Study 3. Skin Irritation/Sensitization Study	☐

Active Ingredient: NIACIN
Dosage Form;Route: TABLET, EXTENDED RELEASE; ORAL
Proprietary Name: NIASPAN
Applicant: ABBOTT
Strength: 500MG
Application Number: 020381
Product Number: 002
Approval Date: Jul 28, 1997
Reference Listed Drug No
RX/OTC/DISCN: RX
TE Code:
