ANDA 203133

ANDA APPROVAL

Amneal Pharmaceuticals LLC
50 Horseblock Road
Brookhaven, NY 11719
Attention: Pavan Kumar
Director, Regulatory Affairs

Dear Sir:

This letter is in reference to your abbreviated new drug application (ANDA) received for review on July 8, 2011, submitted pursuant to section 505(j) of the Federal Food, Drug, and Cosmetic Act (FD&C Act) for Dextromethorphan Polistirex Extended-Release Oral Suspension, (equivalent to Dextromethorphan Hydrobromide, 30 mg/5 mL) [OTC].

Reference is also made to the complete response letter issued by this office on July 14, 2015, and to your amendments received on July 14 and November 10, 2016; and February 6, April 24, and June 8, 2017.

We have completed the review of this ANDA and have concluded that adequate information has been presented to demonstrate that the drug is safe and effective for over-the-counter (OTC) use as recommended in the submitted labeling. Accordingly the ANDA is **approved**, effective on the date of this letter. The Office of Bioequivalence has determined your Dextromethorphan Polistirex Extended-Release Oral Suspension, (equivalent to Dextromethorphan Hydrobromide, 30 mg/5 mL) [OTC], to be bioequivalent to the reference listed drug (RLD), Delsym Extended-Release Oral Suspension, 30 mg/5 mL, of Reckitt Benckiser LLC. Your dissolution testing should be incorporated into the stability and quality control program using the FDA-recommended method and specification for your application (see enclosure).

Under section 506A of FD&C Act, certain changes in the conditions described in this ANDA require an approved supplemental application before the change may be made.

REPORTING REQUIREMENTS

Post marketing reporting requirements for this ANDA are set forth in 21 CFR 314.80-81 and 314.98. The Office of Generic Drugs should be advised of any change in the marketing status of this drug.

ANNUAL FACILITY FEES

The Generic Drug User Fee Amendments of 2012 (GDUFA) (Public Law 112-144, Title III) established certain provisions with respect to self-identification of facilities and payment of annual facility fees. Your ANDA identifies at least one facility that is subject to the self-identification requirement and payment of an annual facility fee. Self-identification must occur by June 1st of each year for the next fiscal year. Facility fees must be paid each year by the date specified in the *Federal Register* notice announcing facility fee amounts. All finished dosage forms (FDFs) or active pharmaceutical ingredients (APIs) manufactured in a facility that has not met its obligations to self-identify or to pay fees when they are due will be deemed misbranded. This means that it will be a violation of federal law to ship these products in interstate commerce or to import them into the United States. Such violations can result in prosecution of those responsible, injunctions, or seizures of misbranded products. Products misbranded because of failure to self-identify or pay facility fees are subject to being denied entry into the United States.

CONTENT OF LABELING

As soon as possible, but no later than 14 days from the date of this letter, submit, using the FDA automated drug registration and listing system (eLIST), the content of labeling [21 CFR 314.50(l)] in structured product labeling (SPL) format, as described at http://www.fda.gov/ForIndustry/DataStandards/StructuredProductLabeling/default.htm, that is identical in content to the approved labeling (including the package insert, and any patient package insert and/or Medication Guide that may be required). Information on submitting SPL files using eLIST may be found in the guidance for industry titled "SPL Standard for Content of Labeling Technical Qs and As" at http://www.fda.gov/downloads/DrugsGuidanceComplianceRegulatoryInformation/Guidances/UCM072392.pdf. The SPL will be accessible via publicly available labeling repositories.

The Electronic Common Technical Document (eCTD) is CDER's standard format for electronic regulatory submissions. Beginning May 5, 2017, ANDAs must be submitted in eCTD format and beginning May 5, 2018, drug master files must be submitted in eCTD format. Submissions that do not adhere to the requirements stated in the eCTD Guidance will be subject to rejection. For more information please visit: www.fda.gov/ectd.

Sincerely yours,

{See appended electronic signature page}

For Vincent Sansone, PharmD
Acting Deputy Director
Office of Regulatory Operations
Office of Generic Drugs
Center for Drug Evaluation and Research

ENCLOSURE:

DISSOLUTION

The "interim" dissolution specifications are as follows:

Medium	500 mL of 0.1N HCl at 37ºC ± 0.5ºC for 1 hour followed with addition of 400 mL of phosphate buffer (final pH 6.8) containing 0.25 M Sodium chloride after 1 hour sampling
USP Apparatus	II (Paddle)
RPM	50
Temperature	37°C±0.5°C
Specifications	Acid Stage: 1 hr (b) (4) Buffer Stage: 30 min: (b) (4); 60 min: (b) (4); 360 min (6 hrs) NLT (b) (4)

The "interim" dissolution test(s) and tolerances should be finalized by submitting dissolution data for the first three production size batches. Data should be submitted as a Supplement – Changes Being Effected when there are no revisions to the "interim" specifications or when the final specifications are more stringent than the "interim" specifications. In all other instances, the information should be submitted in a Prior Approval Supplement.

ANDA 203133

COMPLETE RESPONSE

Amneal Pharmaceuticals
85 Adams Avenue
Hauppauge, NY 11788
Attention: Alpesh Patel
Vice President, Global Regulatory Affairs

Dear Sir:

Please refer to your Abbreviated New Drug Application (ANDA) dated July 7, 2011, received July 8, 2011, submitted under section 505(j) of the Federal Food, Drug, and Cosmetic Act for Dextromethorphan Polistirex Extended-release Oral Suspension, 30 mg/5 mL (OTC).

We acknowledge receipt of your amendments dated August 24, September 1, and September 16, 2011; April 24, June 14, and August 8, 2012; and January 4 and February 12, 2013.

We have completed our review of this ANDA, as amended, and have determined that we cannot approve this ANDA in its present form. We have described our reasons for this action below and, where possible, our recommendations to address these issues.

PRODUCT QUALITY

1. (b) (4)

2.

10 Page(s) have been Withheld in Full as b4 (CCI/TS) immediately following this page

BIOEQUIVALENCE

Deficiencies Related to the Bioequivalence (BE) Studies

1. You did not submit **ALL** analytical raw numerical data. Please provide complete (100%) raw numerical data, in the instrument printout format, including original and repeated analysis for all samples, including the data of peak area/height for the analyte, peak area/height for the internal standard, ratio of the peak area/height for the analyte to the peak area/height for the internal standard, dilution factor (if any), and the corresponding concentration for each assayed and reassayed sample of all samples, calibration standard concentration samples, and quality control samples for your fasting (#ARL/10/408) and fed (#ARL/10/409) BE studies.

2. You did not submit concentration and pharmacokinetic data of dextromethorphan in SAS transport files (.xpt) for fasting (#ARL/10/408) study subjects. Instead, you provided concentration and pharmacokinetic data of dextromethorphan in SAS transport files (.xpt) for fed (#ARL/10/409) study in duplicated. Therefore, please submit dextromethorphan concentration and pharmacokinetic data for the fasting study in SAS transport format.

Deficiency Related to the Formulation

3. (b) (4)

For Future Submissions

4. You used a non-standard high-fat vegetarian breakfast in the fed BE study (#ARL/10/409). Currently, there is no adequate data from which to conclude that a high-fat vegetarian breakfast served prior to dosing in BE studies under a fed state will have the same effect on drug absorption as the standard FDA high-fat breakfast using meat as the main protein source. Therefore, the DBIII does not encourage the use of vegetarian meals for breakfast in future fed BE study.

The bioequivalence comments provided in this communication are comprehensive as of issuance. However, these comments are subject to revision if additional concerns raised by chemistry, manufacturing and controls, microbiology, labeling, other scientific or regulatory issues or inspectional results arise in the future. Please be advised that these concerns may result in the need for additional bioequivalence information and/or studies, or may result in a conclusion that the proposed formulation is not approvable.

DISSOLUTION

The Division of Bioequivalence has completed its review of the dissolution testing portion of your submission. We acknowledge you will conduct dissolution testing for your test product using the following FDA-recommended dissolution method and specifications:

Dissolution Medium:	500 mL of 0.1N HCl at 37ºC ± 0.5ºC for 1 hour followed with addition of 400 mL of phosphate buffer (final pH 6.8) containing 0.25 M Sodium chloride after 1hr sampling.
USP Apparatus:	II (Paddle)
RPM:	50
Temperature:	37°C± 0.5°C
Specifications	Acid Stage: 1 hr (b) (4) Buffer Stage: 30 min: (b) (4); 60 min: (b) (4); 360 min (6 hrs) NLT (b) (4)

LABELING

1. GENERAL COMMENTS
   a. Please include a Format Legend with each of your submissions for the container labels and carton labeling to help us verify your compliance with the labeling format requirements of 21 CFR 201.66.
   b. Please revise the established name to read "Dextromethorphan Polistirex Extended-release Oral Suspension" [use a lower case letter "r" for the word "release"].
   c. (b) (4)
   d. Please explain the tamper evident feature of your packaging configuration to ensure your compliance with 21 CFR 211.132. Also, include an additional and prominent tamper-evident statement on the principal display panel.
   e. (b) (4)
2. CONTAINER (89 mL and 148 mL)
   a. Please refer to the GENERAL COMMENTS where appropriate.
   b. Active Ingredient: Please revise to read "…30 mg dextromethorphan hydrobromide, USP." [add "USP"].
   c. Other Information: (b) (4)
3. CARTON (1 x 89 mL and 1 x 148 mL)
   a. Please refer to the GENERAL COMMENTS where appropriate.
   b. Please add the product strength to the top panel with the established name.
   c. Active ingredient: Please revise to read "30 mg dextromethorphan hydrobromide, USP" [add ", USP"].

d. Uses, second bullet: Please revise to read "…to help you get to sleep" [add "to" before the word "sleep"].

e. Directions: Please add "mL = milliliter" as the last bullet point, per RLD labeling.

f. Other information: Please revise to read "Dosing cup provided" (b) (4) (b) (4)

g. Inactive ingredients: Please add "sodium polystyrene sulfonate" to the list.

h. Inactive ingredients: Please include the following in the list: "hydrochloric acid or sodium hydroxide solution, if required, to adjust the pH".

i. Dosing chart on the right panel: Please add the following text: "mL = milliliter".

j. Please revise the picture of the dosing cup in accordance with the recommendations in section 4 below.

4. DOSING CUP (10 mL)

a. We acknowledge the document entitled, "PROTOCOL/REPORT OF SUITABILITY OF THE GRADUATION OF DOSAGE CUPS FOR LIQUID DOSAGE FORMS" and the "Specification Sheet" in section 3.2.P.7 of your submission. However, to help us further evaluate your proposed dosing cup, please provide a photograph of the actual, to be marketed dosing cup (front and back) as well as a comparison with the RLD's dosing cup. Please submit to both chemistry and labeling for full evaluation.

b. We recommend that you add the established name above the dosing values.

c. We recommend that you replace the current picture of the dosing cup on the container labels and carton labeling with one that depicts the front of the actual dosing cup, displaying the dosing values.

5. SPL

a. Please revise the SPL in accordance with your revised labels and labeling.

b. Data elements/Inactive Ingredients: Please add "sodium polystyrene sulfonate", "hydrochloric acid", and "sodium hydroxide" to the list.

Submit your revised labeling electronically in final print format.

To facilitate review of your next submission, please provide a side-by-side comparison of your proposed labeling with your last submitted labeling with all differences annotated and explained.

Prior to the submission of your amendment, please check labeling resources, including DRUGS@FDA, the Electronic Orange Book and the NF-USP online, for recent updates and make any necessary revisions to your labels and labeling.

In order to keep ANDA labeling current, we suggest that you subscribe to the daily or weekly updates of new documents posted on the CDER web site at the following address - http://service.govdelivery.com/service/subscribe.html?code=USFDA_17.

FACILITY INSPECTIONS

Office of Compliance has no further questions at this time. The compliance status of each facility named in the application may be re-evaluated upon re-submission.

OTHER

A partial response to this letter will not be processed as a resubmission and will not start a new review cycle.

Prominently identify the submission with the following wording in bold capital letters at the top of the first page of the submission:

RESUBMISSION
MINOR
COMPLETE RESPONSE AMENDMENT
CHEMISTRY / BIOEQUIVALENCE / LABELING

Within one year after the date of this letter, you are required to resubmit or take other actions available under 21 CFR 314.110. If you do not take one of these actions, we may consider your lack of response a request to withdraw the ANDA under 21 CFR 314.65. You may also request an extension of time in which to resubmit the ANDA. A resubmission response must fully address all the deficiencies listed.

The drug product may not be legally marketed until you have been notified in writing that this ANDA is approved.

The Generic Drug User Fee Amendments of 2012 (GDUFA) (Public Law 112-144, Title III) established certain provisions with respect to self-identification of facilities and payment of annual facility fees. Your ANDA identifies at least one facility that is subject to the self-identification requirement and payment of an annual facility fee. Self-identification must occur by June 1 of each year for the next fiscal year. Facility fees must be paid each year by the date specified in the Federal Register notice announcing facility fee amounts. All finished dosage forms (FDFs) or active pharmaceutical ingredients (APIs) manufactured in a facility that has not met its obligations to self-identify or to pay fees when they are due will be deemed misbranded. This means that it will be a violation of federal law to ship these products in interstate commerce or to import them into the United States. Such violations can result in prosecution of those responsible, injunctions, or seizures of misbranded products. Products misbranded because of failure to self-identify or pay facility fees are subject to being denied entry into the United States.

In addition, we note that GDUFA requires that certain non-manufacturing sites and organizations listed in generic drug submissions comply with the self-identification requirement. The failure of any facility, site, or organization to comply with its obligation to self-identify and/or to pay fees when due may raise significant concerns about that site or organization and is a factor that may increase the likelihood of a site inspection prior to approval. FDA does not expect to give

priority to completion of inspections that are required simply because facilities, sites, or organizations fail to comply with the law requiring self identification or fee payment.

Additionally, we note that the failure of any facility referenced in the application to self-identify and pay applicable fees means that FDA will not consider the GDUFA application review goal dates to apply to that application.

If you have any questions, call Vikas Arora, Regulatory Project Manager, at (240) 402-8884.

Sincerely yours,

Denise P. Toyer -A

12 Hour Cough Relief
Orange

Drug Facts

Active ingredient (in each 5 mL)

Dextromethorphan polistirex equivalent to 30 mg dextromethorphan hydrobromide, USP

Purpose

Cough suppressant

Uses

Temporarily relieves

- cough due to minor throat and bronchial irritation as may occur with the common cold or inhaled irritants
- the impulse to cough to help you get to sleep

Warnings

Do not use if you are now taking a prescription monoamine oxidase inhibitor (MAOI) (certain drugs for depression, psychiatric or emotional conditions, or Parkinson's disease), or for 2 weeks after stopping the MAOI drug. If you do not know if your prescription drug contains an MAOI, ask a doctor or pharmacist before taking this product.

Ask a doctor before use if you have

- chronic cough that lasts as occurs with smoking, asthma or emphysema
- cough that occurs with too much phlegm (mucus)

Stop use and ask a doctor if cough lasts more than 7 days, cough comes back, or occurs with fever, rash or headache that lasts. These could be signs of a serious condition.

If pregnant or breast-feeding, ask a health professional before use.

Keep out of reach of children. In case of overdose, get medical help or contact a Poison Control Center right away.

Directions

- **shake bottle well before use**

- measure only with dosing cup provided. Do not use dosing cup with other products.
- dose as follows or as directed by a doctor
- mL = milliliter

adults and children 12 years of age and over	10 mL every 12 hours, not to exceed 20 mL in 24 hours
children 6 to under 12 years of age	5 mL every 12 hours, not to exceed 10 mL in 24 hours
children 4 to under 6 years of age	2.5 mL every 12 hours, not to exceed 5 mL in 24 hours
children under 4 years of age	do not use

Other information

- each 5 mL contains: **sodium 7 mg**
- store at 20° to 25°C (68° to 77°F)
- dosing cup provided

Review Conclusion

☐ ACCEPTABLE – No Comments.

☒ ACCEPTABLE – Include Post Approval Comments

☐ Minor Deficiency* – Refer to Labeling Deficiencies and Comments for the Letter to Applicant.

*Please Note: The Regulatory Project Manager (RPM) may change the recommendation from Minor Deficiency to Easily Correctable Deficiency if all other OGD reviews are acceptable. Otherwise, the labeling minor deficiencies will be included in the Complete Response (CR) letter to the applicant.

☐ On Policy Alert List

1. LABELING COMMENTS

1.1 LABELING DEFICIENCIES AND COMMENTS FOR LETTER TO APPLICANT

N/A

Submit your revised labeling electronically. The prescribing information and any patient labeling should reflect the full content of the labeling as well as the planned ordering of the content of the labeling. The container label and any outer packaging should reflect the content as well as an accurate representation of the layout, color, text size, and style.

To facilitate review of your next submission, please provide a side-by-side comparison of your proposed labeling with Choose an item. all differences annotated and explained. We also advise that you only address the deficiencies noted in this communication.

However, prior to the submission of your amendment, please check labeling resources, including DRUGS@FDA, the electronic Orange Book and the NF-USP online, for recent updates and make any necessary revisions to your labels and labeling.

In order to keep ANDA labeling current, we suggest that you subscribe to the daily or weekly updates of new documents posted on the CDER web site at the following address –

http://service.govdelivery.com/service/subscribe.html?code=USFDA_17

1.2 COMMENTS FOR LETTER TO APPLICANT WHEN LABELING IS ACCEPTABLE

The Division of Labeling has no further questions/comments at this time based on your labeling submission dated July 14, 2016.

1.3 POST APPROVAL REVISIONS

These comments will NOT be sent to the applicants at this time.
These comments will be addressed post approval (in the first labeling supplement review).

CONTAINER LABELS AND CARTON LABELING

1. Established name presentation (including the dosing cup): (b) (4) "Extended-release" (b) (4) (b) (4)
2. We recommend including a description of your container closure system's tamper evident feature in the tamper evident statement [e.g., "TAMPER EVIDENT: Do not use if the seal on bottle imprinted with XX is broken or missing" ("XX" to be replaced with your tamper evident feature)]. For guidance, we refer you to the RLD's which states: "TAMPER EVIDENT: Do not use if the neckband printed with √ is broken or missing."
3. Directions (carton labeling): (b) (4) "do not use dosing cup with other products".

2. PREVIOUS LABELING REVIEW, DEFICIENCIES, FIRM'S RESPONSE, AND REVIEWER'S ASSESSMENT

In this section, we include any previous labeling review deficiencies, the firm's response and reviewer's assessment to firm's response as well as any new deficiencies found in this cycle. Include the previous review cycle and the review's submission date(s) [e.g. "The below comments are from the labeling review C3 based on the submission dated 7/4/15"].

Reviewer Comments: Deficiencies identified in the 2/5/14 labeling review (C1) and the applicant's responses to the 7/14/15 CR, submitted on 7/14/16 are as follow:

1. **GENERAL COMMENTS**

   a. **Please include a Format Legend with each of your submissions for the container labels and carton labeling to help us verify your compliance with the labeling format requirements of 21 CFR 201.66.**

   b. **Please revise the established name to read "Dextromethorphan Polistirex Extended-release Oral Suspension" [use a lower case letter "r" for the word "release"].**

   c. (b) (4)

   d. **Please explain the tamper evident feature of your packaging configuration to ensure your compliance with 21 CFR 211.132. Also, include an additional and prominent tamper-evident statement on the principal display panel.**

   e. (b) (4)

   Amneal's Response:

   Amneal acknowledges the Agency's comments.

   As recommended by the agency, Amneal has revised the labeling as mentioned above.

   Regarding the tamper evident feature of Amneal's packaging configuration, Amneal's product is having a shrink band around the bottle neck and cap, same like the RLD.

   Please refer to **Module 1.14.2.1** for the revised final container and carton labels.

   For side-by-side comparison of Amneal's revised container and carton labels vs. Amneal's previously submitted container and carton labels, please refer to **Module 1.14.1.2**.

2. **CONTAINER (89 mL and 148 mL)**

   a. **Please refer to the GENERAL COMMENTS where appropriate.**

   b. **Active Ingredient: Please revise to read "…30 mg dextromethorphan hydrobromide, USP." [add "USP"].**

   c. **Other Information:** (b) (4)

   Amneal's Response:

   Amneal acknowledges the Agency's comments.

   As recommended by the agency, Amneal has revised the labeling as mentioned above.

   Please refer to **Module 1.14.2.1** for the revised final container labels.

   For side-by-side comparison of Amneal's revised container labels vs. Amneal's previously submitted container labels, please refer to **Module 1.14.1.2**.

3. **CARTON (1 x 89 mL and 1 x 148 mL)**

   a. **Please refer to the GENERAL COMMENTS where appropriate.**

   b. **Please add the product strength to the top panel with the established name.**

   c. **Active ingredient: Please revise to read "30 mg dextromethorphan hydrobromide, USP" [add ", USP"].**

   d. **Uses, second bullet: Please revise to read "…to help you get to sleep" [add "to" before the word "sleep"].**

   e. **Directions: Please add "mL = milliliter" as the last bullet point, per RLD labeling.**

   f. **Other information: Please revise to read "Dosing cup provided" (b) (4) (b) (4)**

   g. **Inactive ingredients: Please add "sodium polystyrene sulfonate" to the list.**

   h. **Inactive ingredients: Please include the following in the list: "hydrochloric acid or sodium hydroxide solution, if required, to adjust the pH".**

   i. **Dosing chart on the right panel: Please add the following text: "mL = milliliter".**

   j. **Please revise the picture of the dosing cup in accordance with the recommendations in section 4 below.**

   Amneal's Response:

   Amneal acknowledges the Agency's comments.

   As recommended by the agency, Amneal has revised the labeling as mentioned above.

   Please refer to **Module 1.14.2.1** for the revised final carton labels.

   For side-by-side comparison of Amneal's revised carton labels vs. Amneal's previously submitted carton labels, please refer to **Module 1.14.1.2**.

4. **DOSING CUP (10 mL)**

a. **We acknowledge the document entitled, "PROTOCOL/REPORT OF SUITABILITY OF THE GRADUATION OF DOSAGE CUPS FOR LIQUID DOSAGE FORMS" and the "Specification Sheet" in section 3.2.P.7 of your submission. However, to help us further evaluate your proposed dosing cup, please provide a photograph of the actual, to be marketed dosing cup (front and back) as well as a comparison with the RLD's dosing cup. Please submit to both chemistry and labeling for full evaluation.**

Amneal's Response:

As requested by the Agency, photographs of the actual, to be marketed dosing cup (front and back) as well as a comparison with the RLD's dosing cup is provided in **Module 1.14.1.2**

The same information is also provided in **Module 3.2.P.7** for chemistry review.

b. **We recommend that you add the established name above the dosing values.**

Amneal's Response:

(b) (4)

photographs of the actual, to be marketed dosing cup (front and back) as well as a comparison with the RLD's dosing cup is provided in **Module 1.14.1.2**. As per FDA's request in the CR letter, the samples of the product and dosing cup were sent to FDA on July 14, 2016. (b) (4)

(b) (4)

(b) (4) The updated drawing of dosing cup showing the appearance of text is provided in **Module 3.2.P.7**

c. **We recommend that you replace the current picture of the dosing cup on the container labels and carton labeling with one that depicts the front of the actual dosing cup, displaying the dosing values.**

Amneal's Response:

As requested by the Agency, the picture of the dosing cup on the container and carton labeling have been replaced with the ones that depict the front of the actual dosing cup, displaying the dosing values. Please refer to **Module 1.14.2.1** for revised carton and container labels.

5. **SPL**

a. **Please revise the SPL in accordance with your revised labels and labeling.**

b. **Data elements/Inactive Ingredients: Please add "sodium polystyrene sulfonate", "hydrochloric acid", and "sodium hydroxide" to the list.**

Amneal's Response:

Amneal acknowledges Agency's comment. The SPL file has been revised in accordance with revised labels and labeling. As suggested by the Agency, data elements for "sodium polystyrene sulfonate", "hydrochloric acid", and "sodium hydroxide" were added to the list. The SPL file is provided in **Module 1.14.2.3**.

Submit your revised labeling electronically in final print format.

The responses and the revised labels and labeling are satisfactory, pending CMC assessment, as indicated in section 2.2.

2.1 CONTAINER AND CARTON LABELS

Did the firm submit container and/or carton labels that were **NOT** requested in the previous labeling review?
NO

If yes, state the reason for the submission, and comment below whether the proposed revisions are acceptable or deficient.

Reviewer Comments: The container labels and carton labeling were revised as requested by the Agency. Additionally, the distributor's information has been updated. The first labeling review did not request the applicant to include a description of the container closure system's tamper evident feature in their tamper evident statement. For example, the RLD's states: "**TAMPER EVIDENT: Do not use if the** neckband printed with is broken or missing." Post approval revisions will be requested.

Received on 7/8/11:

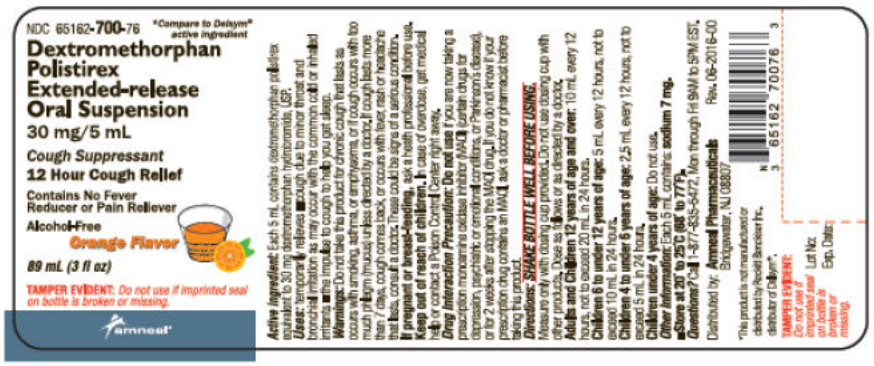
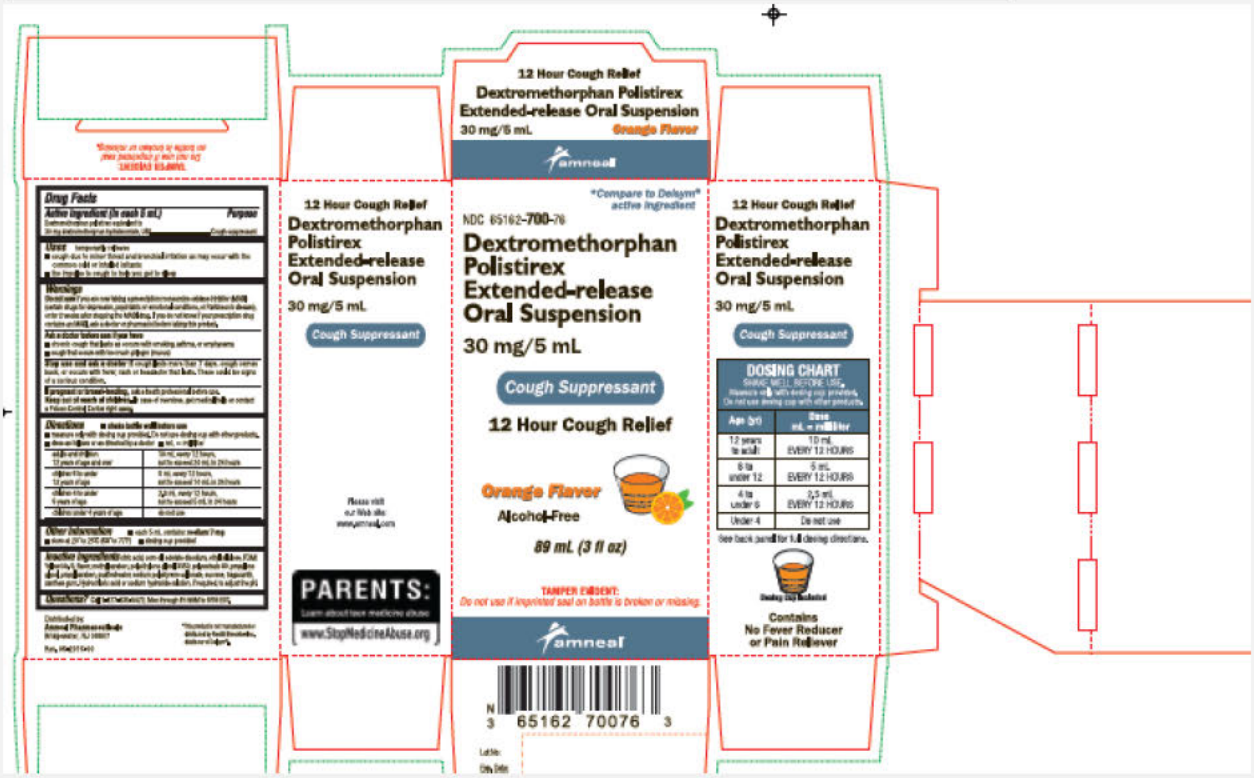
Resubmitted on 7/14/16:



(b) (4)



2.2 ADDITIONAL BACKGROUND INFORMATION PERTINENT TO THE REVIEW

In this section, include any correspondence or internal information pertinent to the review. Include the correspondence(s) and/or information date(s) [e.g. resolution of any pending chemistry review or issue].

6 Page(s) have been Withheld in Full as b4 (CCI/TS) immediately following this page

DISSOLUTION

The Division of Bioequivalence has completed its review of the dissolution testing portion of your submission. We acknowledge you will conduct dissolution testing for your test product using the following FDA-recommended dissolution method and specifications:

Dissolution Medium:	**500 mL of 0.1N HCl at 37°C + 0.5°C for 1 hour followed with addition of 400 mL of phosphate buffer (final pH 6.8) containing 0.25 M Sodium chloride after 1hr sampling.**
USP Apparatus:	**II (Paddle)**
RPM:	**50**
Temperature:	**37°C± 0.5°C**
Specifications	**Acid Stage: 1 hr (b) (4) Buffer Stage: 30 min: (b) (4); 60 min: (b) (4); 360 min (6 hrs) NLT (b) (4)**

Amneal's Response:

Amneal acknowledges the Agency's comment and agrees to perform the dissolution testing as per the above conditions.

From module 1.14.1.2 submitted on 7/14/1:

(b) (4)

3. LABELING REVIEW INFORMATION AND REVIEWER ASSESSMENT

3.1 REGULATORY INFORMATION

Are there any pending issues in DLR's SharePoint Drug Facts? NO If Yes, please explain in section 2.2 Additional Background Information Pertinent to the Review
Is the drug product listed in the Policy Alert Tracker on OGD's SharePoint? NO If Yes, please explain.

3.2 MODEL PRESCRIBING INFORMATION

Table 1: Review Model Labeling for Prescribing Information and Patient Labeling (Check the box used as the Model Labeling)
☒ **MOST RECENTLY APPROVED NDA MODEL LABELING** *(If NDA is listed in the discontinued section of the Orange Book, also enter ANDA model labeling information.)* **NDA# /Supplement# (S-000 if original):** 018658/S-030 **Supplement Approval Date:** 6/19/14 **Proprietary Name:** Delsym **Established Name:** dextromethorphan polistirex extended-release suspension **Description of Supplement:** This "Prior Approval" sNDA provides for a revision of the proprietary name layout and updated graphics for the pediatric labeling of the orange and grape-flavored SKUs.
☐ **MOST RECENTLY APPROVED ANDA MODEL LABELING** **ANDA#/Supplement# (S-000 if original):** Click here to enter text. **Supplement Approval Date:** Click here to enter text. **Proprietary Name:** Click here to enter text. **Established Name:** Click here to enter text. **Description of Supplement:**
☐ **TEMPLATE (e.g., BPCA, PREA, Carve-out):** Click here to enter text.
☒ **OTHER (Describe):** There are no pending supplements for this NDA.

Reviewer Assessment:

Is the Prescribing Information same as the model labeling, except for differences allowed under 21 CFR 314.94(a)(8)? **NA**
Are the specific requirements for format met under 21 CFR 201.57(new) or 201.80(old)? **NA**
Does the Model Labeling have combined insert labeling for multiple dosage forms? **NA**

Reviewer Comments:

- The ANDA product is an OTC and does not contain a package insert.
- The revisions to the RLD labels and labeling that are proposed in S-030 do not involve any updates to the drug facts and are only related to the presentation of information with respect to the NDA's [redacted] (b) (4)
- Regarding S-030, as per the "nonclinical" labeling review for S-030, *The sponsor did not make any changes to the drug facts label and these changes will not influence the 'adult" labels. On March 6, 2014, the sponsor submitted updated label to replace the December 23, 2013 submission. On June 2, 2014 the sponsor provided an information request to identify representative labeling which is shown in the chart below.*

(b) (4)

The proposed labeling was compared to the currently approved labeling (dated May 9, 2011) that was approved as part of NDA 18658/S-29.

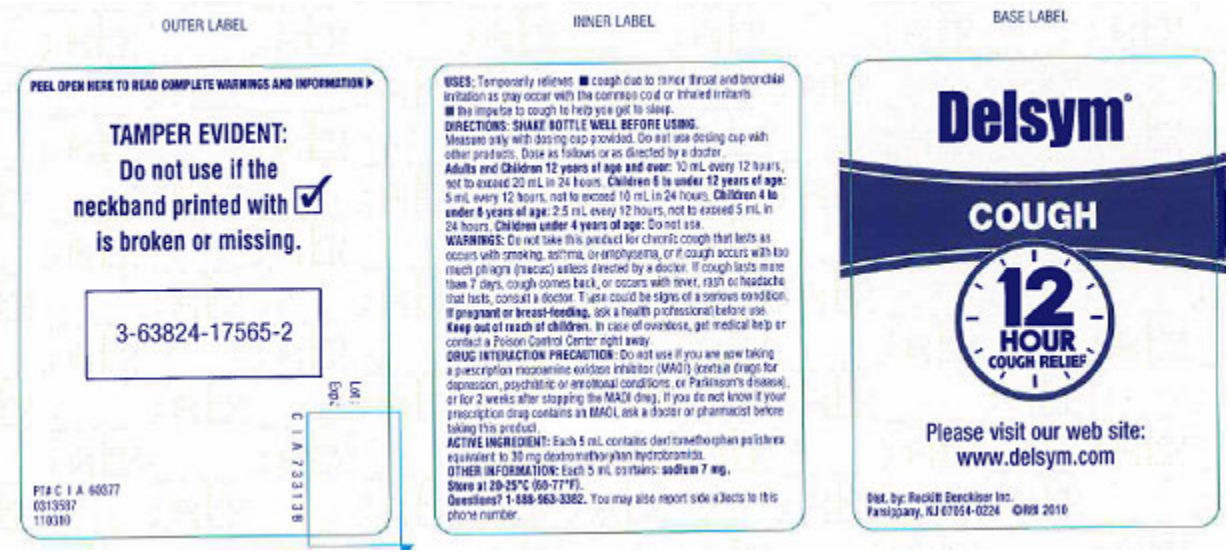
Outer Carton Drug Facts Label

Note: There were no changes to the drug fact panel with respect to content. The annoted format font specifications are in accordance with 21 CFR 201.66. This is acceptable.

3.3 MODEL CONTAINER LABELS

Model container/carton/blister labels [Source: see below]

S-029 approved 5/16/11:



Notes from the DMEPA label and labeling review of S-030 dated 4/21/14:

The applicant proposes to add the descriptor "Children's" above the proprietary name "Delsym" (December 20, 2013 submission) and to change graphics and location of text on the principal display panel (March 6, 2014 submission) on the pediatric orange-flavored and grapeflavored product packaging labels and labeling while making no changes to the Drug Facts label.

CONCLUSION & RECOMMENDATIONS

DMEPA concludes that the proposed container labels and carton labeling are acceptable from a medication errors perspective.

Proposed Children's Delsym Grape 5 oz Bottle Label

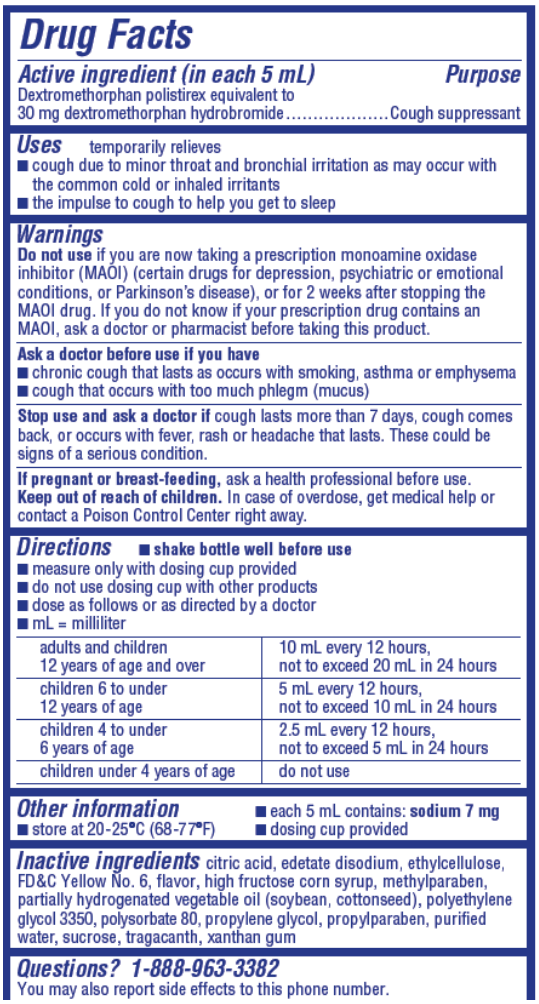
FRONT LABEL

Proposed Children's Delsym Grape 5 oz Carton Labeling

Proposed Children's Delsym Orange 5 oz Bottle Label Carton Labeling

FRONT LABEL

Proposed Children's Delsym Orange 5 oz Carton Labeling



Drug Facts

Active ingredient (in each 5 mL) — **Purpose**
Dextromethorphan polistirex equivalent to 30 mg dextromethorphan hydrobromide ..... Cough suppressant

Uses temporarily relieves
- cough due to minor throat and bronchial irritation as may occur with the common cold or inhaled irritants
- the impulse to cough to help you get to sleep

Warnings
Do not use if you are now taking a prescription monoamine oxidase inhibitor (MAOI) (certain drugs for depression, psychiatric or emotional conditions, or Parkinson's disease), or for 2 weeks after stopping the MAOI drug. If you do not know if your prescription drug contains an MAOI, ask a doctor or pharmacist before taking this product.

Ask a doctor before use if you have
- chronic cough that lasts as occurs with smoking, asthma or emphysema
- cough that occurs with too much phlegm (mucus)

Stop use and ask a doctor if cough lasts more than 7 days, cough comes back, or occurs with fever, rash or headache that lasts. These could be signs of a serious condition.

If pregnant or breast-feeding, ask a health professional before use.
Keep out of reach of children. In case of overdose, get medical help or contact a Poison Control Center right away.

Directions ■ **shake bottle well before use**
- measure only with dosing cup provided
- do not use dosing cup with other products
- dose as follows or as directed by a doctor
- mL = milliliter

adults and children 12 years of age and over	10 mL every 12 hours, not to exceed 20 mL in 24 hours
children 6 to under 12 years of age	5 mL every 12 hours, not to exceed 10 mL in 24 hours
children 4 to under 6 years of age	2.5 mL every 12 hours, not to exceed 5 mL in 24 hours
children under 4 years of age	do not use

Other information
- store at 20-25°C (68-77°F)
- each 5 mL contains: **sodium 7 mg**
- dosing cup provided

Inactive ingredients citric acid, edetate disodium, ethylcellulose, FD&C Yellow No. 6, flavor, high fructose corn syrup, methylparaben, partially hydrogenated vegetable oil (soybean, cottonseed), polyethylene glycol 3350, polysorbate 80, propylene glycol, propylparaben, purified water, sucrose, tragacanth, xanthan gum

3.4 UNITED STATES PHARMACOPEIA (USP) & PHARMACOPEIA FORUM (PF)

We searched the USP and PF to determine if the drug product under review is the subject of a USP monograph or proposed USP monograph.

Table 2: USP and PF Search Results

	Date Searched	Monograph ? YES or NO	Monograph Title (NA if no monograph)	Packaging and Storage/Labeling Statements (NA if no monograph)
USP	7/25/2016	NO	NA	NA
PF	7/25/2016	NO	NA	NA

Reviewer Comments:
None.

3.5 PATENTS AND EXCLUSIVITIES

The Orange Book was searched on 7/25/2016.

Table 3 provides Orange Book patents for the Model Labeling and ANDA patent certifications.

(For applications that have no patents, N/A is entered in the patent number column)

Table 3: Impact of Model Labeling Patents on ANDA Labeling

Table 3: Impact of Model Labeling Patents on ANDA Labeling						
Patent Number	**Patent Expiration**	**Patent Use Code**	**Patent Use Code Definition**	**Patent Certification**	**Date of Patent Cert Submission**	**Labeling Impact**
5980882	Apr 16, 2017			PIV	7/8/11	None

Reviewer Assessment:

Is the applicant's "patent carve out" acceptable? **NA**

Reviewer Comments:

None.

Table 4 provides Orange Book exclusivities for the Model Labeling and ANDA exclusivity statements.

Table 4: Impact of Model Labeling Exclusivities on ANDA Labels and Labeling					
Exclusivity Code	**Exclusivity Expiration**	**Exclusivity Code Definition**	**Exclusivity Statement**	**Date of Exclusivity Submission**	**Labeling Impact**
Click here to enter text.					

Reviewer Assessment:

Is the applicant's "exclusivity carve out" acceptable? **NA**

Reviewer Comments:

There is no unexpired exclusivity for this product.

4. DESCRIPTION, HOW SUPPLIED AND MANUFACTURED BY STATEMENT

Tables 5, 6, and 7 describe any changes in the inactive ingredients, dosage form description, package sizes, and manufacturer/distributor/packer statements of the Prescribing Information or Drug Facts for OTC products when compared to the previous labeling review.

Reviewer Assessment:

Are there changes to the inactives in the DESCRIPTION section or Inactive Ingredients (OTC)? **NO**
Are there changes to the dosage form description(s) or package size(s) in HOW SUPPLIED or package size(s) for OTC? **NO**
Are there changes to the manufacturer/distributor/packer statements? **YES**
If yes, then comment below in Tables 5, 6, and 7.

Table 5: Comparison of DESCRIPTION Section or Inactive Ingredients Subsection (OTC)		
Previous Labeling Review	**Currently Proposed**	**Assessment**

Table 5: Comparison of DESCRIPTION Section or Inactive Ingredients Subsection (OTC)		
(b) (4)	citric acid, corn oil, edetate disodium, ethylcellulose, FD&C Yellow No. 6, flavor, methylparaben, polyethylene glycol 3350, polysorbate 80, propylene glycol, propylparaben, purified water, sodium polystyrene sulfonate, sucrose, tragacanth, xanthan gum Hydrochloric acid or sodium hydroxide solution, if required, to adjust the pH.	Updated as requested by the Agency. The chemist has been notified of these additions. Acceptable from a labeling perspective.

Table 6: Comparison of HOW SUPPLIED Section or Packaging Sizes for OTC Products		
Previous Labeling Review	**Currently Proposed**	**Assessment**
(b) (4) round bottles of 89 mL and 148 mL	(b) (4) round bottles of 89 mL and 148 mL	No changes noted.

Table 7: Manufacturer/Distributor/Packer Statements		
Previous Labeling Review	**Currently Proposed**	**Assessment**
(b) (4)	Distributed by: Amneal Pharmaceuticals Bridgewater, NJ 08807 Rev. 06-2016-00	The distributor's updated information is acceptable.

5. COMMENTS FOR CHEMISTRY REVIEWER

Describe issue(s) sent to and/or received from the chemistry (also known as drug product quality) reviewer:

Reviewer Comments:

An email was sent on 7/25/16 to notify the chemist that the Inactive Ingredients section of the Drug Facts on the carton labeling has been updated to include "sodium polystyrene sulfonate" and "hydrochloric acid or sodium hydroxide solution, if required, to adjust the pH", as previously requested by labeling.

6. COMMENTS FOR OTHER REVIEW DISCIPLINES

Describe questions/issue(s) sent to and/or received from other discipline reviewer(s):

Reviewer Comments:
None.

7. OVERALL ASSESSMENT OF MATERIALS REVIEWED

Tables 8 and 9 provide a summary of recommendations for all labeling pieces for this application.

For each row, you **MUST** choose an item "Final, Draft, or "NA". If you enter "NA" under the second column, you do NOT need to enter "NA" for the remaining columns.

Table 8: Review Summary of Container Label and Carton Labeling

Labeling Deficiencies determined on February 4, 2014, based on your submission dated July 7, 2011 (received July 8, 2011):

1. GENERAL COMMENTS

a. Please include a Format Legend with each of your submissions for the container labels and carton labeling to help us verify your compliance with the labeling format requirements of 21 CFR 201.66.

b. Please revise the established name to read “Dextromethorphan Polistirex Extendedrelease Oral Suspension” [use a lower case letter “r” for the word “release”].

c. [redacted] (b) (4)

d. Please explain the tamper evident feature of your packaging configuration to ensure your compliance with 21 CFR 211.132. Also, include an additional and prominent tamper-evident statement on the principal display panel.

e. [redacted] (b) (4)

[redacted]

2. CONTAINER (89 mL and 148 mL)

a. Please refer to the GENERAL COMMENTS where appropriate.

b. Active Ingredient: Please revise to read “…30 mg dextromethorphan hydrobromide, USP.” [add “USP”].

c. Other Information: [redacted] (b) (4)

3. CARTON (1 x 89 mL and 1 x 148 mL)

a. Please refer to the GENERAL COMMENTS where appropriate.

b. Please add the product strength to the top panel with the established name.

c. Active ingredient: Please revise to read “30 mg dextromethorphan hydrobromide, USP” [add “, USP”].

d. Uses, second bullet: Please revise to read "…to help you get to sleep" [add "to" before the word "sleep"].

e. Directions: Please add "mL = milliliter" as the last bullet point, per RLD labeling.

f. Other information: Please revise to read "Dosing cup provided" (b) (4)

g. Inactive ingredients: Please add "sodium polystyrene sulfonate" to the list.

h. Inactive ingredients: Please include the following in the list: "hydrochloric acid or sodium hydroxide solution, if required, to adjust the pH".

i. Dosing chart on the right panel: Please add the following text: "mL = milliliter".

j. Please revise the picture of the dosing cup in accordance with the recommendations in section 4 below.

4. DOSING CUP (10 mL)

a. We acknowledge the document entitled, "PROTOCOL/REPORT OF SUITABILITY OF THE GRADUATION OF DOSAGE CUPS FOR LIQUID DOSAGE FORMS" and the "Specification Sheet" in section 3.2.P.7 of your submission. However, to help us further evaluate your proposed dosing cup, please provide a photograph of the actual, to be marketed dosing cup (front and back) as well as a comparison with the RLD's dosing cup. Please submit to both chemistry and labeling for full evaluation.

b. We recommend that you add the established name above the dosing values.

c. We recommend that you replace the current picture of the dosing cup on the container labels and carton labeling with one that depicts the front of the actual dosing cup, displaying the dosing values.

5. SPL

a. Please revise the SPL in accordance with your revised labels and labeling.

b. Data elements/Inactive Ingredients: Please add "sodium polystyrene sulfonate",

“hydrochloric acid”, and “sodium hydroxide” to the list.

Reference ID: 3448226

Submit your revised labeling electronically in final print format.

To facilitate review of your next submission, please provide a side-by-side comparison of your proposed labeling with your last submitted labeling with all differences annotated and explained.

Prior to the submission of your amendment, please check labeling resources, including DRUGS@FDA, the Electronic Orange Book and the NF-USP online, for recent updates and make any necessary revisions to your labels and labeling.

In order to keep ANDA labeling current, we suggest that you subscribe to the daily or weekly updates of new documents posted on the CDER web site at the following address - http://service.govdelivery.com/service/subscribe.html?code=USFDA_17.

Office of Generic Drugs

REVIEW OF PROFESSIONAL LABELING (First Cycle)

ANDA Number:	203133
Date of Submission:	July 7, 2011 (received July 8, 2011)
Applicant:	Amneal Pharmaceuticals
Established Name and Strength:	Dextromethorphan Polistirex Extended-release Oral Suspension, 30 mg/5 mL (OTC)

Labeling Comments below are considered:

☒ Minor Deficiency *

* Please note that the RPM may change the status from Minor Deficiency to Easily Correctable Deficiency if other disciplines are acceptable.

☐ No Comments (Labeling Approval Summary or Tentative Approval Summary)

REVISIONS NEEDED POST APPROVAL? No

NOTES/QUESTIONS TO THE CHEMIST/BIO REVIEWER/MICRO REVIEWER:
None.

Review Summary

Labeling Submitted	Date submitted	Final or Draft	Recommendation
CONTAINER (89 mL and 148 mL)	July 7, 2011 (received July 8, 2011)	Draft	Not Acceptable
CARTON (1 x 89 mL and 1 x 148 mL)	July 7, 2011 (received July 8, 2011)	Draft	Not Acceptable
SPL	July 7, 2011 (received July 8, 2011)	N/A	Not Acceptable

FOR THE RECORD:

1. **MODEL LABELING**

   The review is based on Delsym (NDA 018658/S-029 approved on May 16, 2011), held by Reckitt Benckiser. S-029 provided for change in the graphical layout for both the 3 fl. oz- and 5 fl. oz "adult" and "pediatric" orange and grape flavored carton and immediate container labels. In addition, this sNDA provides for the replacement of the term "vegetable oil" with "partially hydrogenated soybean oil" on the list of inactive ingredients found on the Drug Facts label.

   S-028 (CMC supplement) approved on November 10, 2010, provided for alternate oval shaped immediate containers for the 3- and 5-fluid ounce packaging sizes: " *Your May 12,*

2010 correspondence notified us that the labels for the 5-fluid ounce grape and orange-flavored (pediatric) cartons and immediate containers are representative of the labels for the 3-fluid ounce grape and orange-flavored (pediatric) cartons and immediate containers. Also, the labels for the 3-fluid ounce (adult graphic) grape and orange-flavors cartons and immediate containers are representative of the labels for the 5-fluid ounce grape and orange-flavored (adult graphic) cartons and immediate containers. Any changes approved for this representative labeling will be incorporated into the labeling of the other package sizes, which are identical with the exception of the volume."

Pending RLD Supplements: S-030 submitted on December 23, 2013, proposes the following changes: Revision of the brand name to "Children's Delsym® and adding the modifier "Children's" above the brand name "Delsym®" on the pediatric labeling of the orange and grape-flavored SKUs.

USES: Temporarily relieves ■ cough due to minor throat and bronchial irritation as may occur with the common cold or inhaled irritants ■ the impulse to cough to help you get to sleep.

DIRECTIONS: SHAKE BOTTLE WELL BEFORE USING. Measure only with dosing cup provided. Do not use dosing cup with other products. Dose as follows or as directed by a doctor.

Adults and Children 12 years of age and over: 10 mL every 12 hours, not to exceed 20 mL in 24 hours. **Children 6 to under 12 years of age:** 5 mL every 12 hours, not to exceed 10 mL in 24 hours. **Children 4 to under 6 years of age:** 2.5 mL every 12 hours, not to exceed 5 mL in 24 hours. **Children under 4 years of age:** Do not use.

WARNINGS: Do not take this product for chronic cough that lasts as occurs with smoking, asthma, or emphysema, or if cough occurs with too much phlegm (mucus) unless directed by a doctor. If cough lasts more than 7 days, cough comes back, or occurs with fever, rash or headache that lasts, consult a doctor. These could be signs of a serious condition.

If pregnant or breast-feeding, ask a health professional before use.

Keep out of reach of children. In case of overdose, get medical help or contact a Poison Control Center right away.

DRUG INTERACTION PRECAUTION: Do not use if you are now taking a prescription monoamine oxidase inhibitor (MAOI) (certain drugs for depression, psychiatric or emotional conditions, or Parkinson's disease), or for 2 weeks after stopping the MAOI drug. If you do not know if your prescription drug contains an MAOI, ask a doctor or pharmacist before taking this product.

ACTIVE INGREDIENT: Each 5 mL contains: dextromethorphan polistirex equivalent to 30 mg dextromethorphan hydrobromide.

OTHER INFORMATION: Each 5 mL contains: **sodium 7 mg.**

Store at 20-25°C (68-77°F).

As required by FDC Act § 505(j)(2)(B)(i)-(iv) and 21 C.F.R. §§ 314.94(a)(12)(i)(A)(4) and 314.95, Amneal hereby states that not later than 20 days after the date of the postmark on the letter from FDA acknowledging that this submission is sufficiently complete to permit a substantive review, the company will send the required notice to the holder of NDA N018658 and to the owner of **US 5980882**. This notice, which will be sent by certified mail, return receipt requested, shall meet the requirements of FDC Act § 505(j)(2)(B)(iv) and 21 C.F.R. §§ 314.95(a) and (c).

Re: Dextromethorphan Polistirex Extended Release Oral Suspension, Equivalent to 30 mg/5 mL of Dextromethorphan Hydrobromide

Patent Amendment: Notice of Legal Action

ANDA # 203133: Sequence # 0005

In accordance with 21 CFR 314.107(f)(2), Amneal Pharmaceuticals hereby provides the Agency with a copy of the complaint served on Amneal Pharmaceuticals by **Reckitt Benckiser Inc.**, NDA **holder of the Reference Listed Drug** (**please see attached**) for **Delsym®** (Dextromethorphan Polistirex Extended Release Oral Suspension, equivalent to 30 mg/5 mL of Dextromethorphan Hydrobromide). Reference is made to the Patent Amendment dated October 7, 2011 (Sequence # 0004) in which Amneal notified the Agency of receipt of the patent notice by **Reckitt Benckiser Inc.** (b) (4)

4. **INACTIVE INGREDIENTS**

The listing of inactive ingredients on the carton labeling does not appear to be consistent with the listing of inactive ingredients found in the statement of components and composition. We will make recommendations.

CONCLUSION:

From the above results (Table 13) of the sodium contents from the R&D batch, PE batch and ANDA submission batches; it was evident that the sodium content in the "Dextromethorphan Polistirex Extended Release Suspension Equivalent to 30 mg/5 mL of Dextromethorphan HBr" is about 7 mg in both RLD and Amneal's Proposed Generic Product.

Based on the above results; Amneal's container labels of Dextromethorphan Polistirex Extended Release suspension, equivalent to 30 mg/5 mL of the Dextromethorphan Hydrobromide are incorporated to include the statement of sodium contents as ***"7 mg of sodium per 5 mL of suspension"*** same as RLD Delsym®.

Note: Firm has included the following statement on the container labels and carton labeling:

Other Information: Each 5 mL contains: **sodium 7 mg.**

ANDA:

store at 20° to 25°C (68° to 77°F)

Satisfactory accelerated stability data (40ºC/75% RH) at 1, 2 & 3 months and 6 months controlled room temperature stability data for the drug product, Dextromethorphan Polistirex ER Suspension, equivalent to Dextromethorphan Hydrobromide Based on our satisfactory accelerated studies, a (b) (4) expiration-dating period is proposed and will be confirmed by controlled room temperature condition stability data (25ºC/60% RH). Our controlled room temperature Condition stability data will support the recommended storage conditions specified in the labeling:

Store at 20° C to 25° C (68° F to 77° F). Please refer following tables for overall stability trend and 3M accelerated comparison between 'upright' vs. 'sideways' orientation.

Exclusivity Data: There is no unexpired exclusivity for this product.

10. PHARMACOL. CATEGORY: Cough Suppressant, Antitussivum

11. DOSAGE FORM: Suspension

12. STRENGTH/POTENCY: Equivalent to 30 mg Dextromethorphan HBR per 5ML

13. ROUTE OF ADMINISTRATION: Oral

14. Rx/OTC DISPENSED: **OTC**

15a. SPOTS (SPECIAL PRODUCTS ON-LINE TRACKING SYSTEM): Not a SPOTS product

15b. NANOTECHNOLOGY PRODUCT TRACKING: Not a NANO product

15c. PRECEDENT: Not a Precedent

16. CHEMICAL NAME, STRUCTURAL FORMULA, MOLECULAR FORMULA, MOLECULAR WEIGHT:

Chemical Name	Morphinan, 3-methoxy-17-methyl-, (9,13,14)-, hydrobromide, monohydrate 3-Methoxy-17-methyl-9,13,14-morphinan hydrobromide monohydrate
CAS#	[6700-34-1]
USAN:	Dextromethorphan Hydrobromide, USP
Molecular Structure:	Molecular Formula:	$C_{18}H_{25}NO \cdot HBr \cdot H_2O$
Molecular Weight:	370.32

Steps	(b) (4)
Packaging	Supplied in [Multi-Dose container] : Orange Flavor Suspension. 89 mL (3 oz) and 148 mL (4 oz): (b) (4) (b) (4) **A dosing cup is provided**. A (b) (4) shrink band is added around the cap, (b) (4) *Note – current submission includes orange flavor suspension* (b) (4) (b) (4)
Labeled Storage	Store at 20° to 25°C (68° to 77°F)
Analytical Methods	(b) (4)
Proposed DP expiration	(b) (4)
Maximum Daily Dose:	MDD Dextromethorphan HBr: (Adult) No more than 20 mL in 24 hours, per RLD labeling [3], equivalent to 120 mg DXM HBr per day

[3] *Package insert :* 'DOSAGE & ADMINISTRATION: (b) (4)

Per MDD [120 mg Dextromethorphan HBr per day] and ICH guideline Q3A/B:

ICH Guideline Threshold for	Reporting Threshold **(RT)**	Identification Threshold **(IT)**	Qualification Threshold **(QT)**
Drug Substance	0.05%	0.10% *	0.15% *
Drug Product	0.1%	0.2% **	0.2% **

* Per *ICH Q3A: at ≤2g/day MDD: IT is '0.10 % OR 1.0 mg whichever is lower', QT is '0.15 % OR 1.0 mg whichever is lower'. Calculation: 1.0 mg / 60 mg = 1.6% is higher. Thus, DS limits of IT = 0.10 % and QT=0.15 % apply.*

** Per *ICH Q3B: at >10mg to2g/day MDD: IT is '0.2 % OR 2 mg whichever is lower', at > 100 mg to 2 g/day, QT is '0.2 % OR 3 mg, whichever is lower'. Calculations: 2 mg / 120 mg =1.67 %; 3 mg / 120 mg = 2.5 %; thus, DP limits of IT =QT= 0.2 % apply.*

B. Description of How the Drug Product is Intended to be Used

Indication	Dextromethorphan Polistirex Suspension is a cough suppressant which temporarily relieves • cough due to minor throat and bronchial irritation as may occur with the common cold or inhaled irritants • the impulse to cough to help you get to sleep
Duration of Therapy	Duration of therapy is labeled for up to one week ('stop use and ask a doctor if cough lasts more than 7 days, cough comes back, or occurs with fever, rash or headache that lasts. These could be signs of a serious condition').
Dosing Instructions and Special Dosing Instructions	**SHAKE BOTTLE WELL BEFORE USING.** ***Directions*** ■ **shake bottle well before use** ■ measure only with dosing cup provided. Do not use dosing cup with other products. ■ dose as follows or as directed by a doctor ■ mL = milliliter adults and children 12 years of age and over: 10 mL every 12 hours, not to exceed 20 mL in 24 hours children 6 to under 12 years of age: 5 mL every 12 hours, not to exceed 10 mL in 24 hours children 4 to under 6 years of age: 2.5 mL every 12 hours, not to exceed 5 mL in 24 hours children under 4 years of age: do not use ***Other information*** ■ store at 20-25°C (68-77°F) ■ each 5 mL contains: **sodium 7 mg** ■ dosing cup provided
Alternate Administration	No alternate administration of the Dextromethorphan Polistirex Suspension is labeled.

FDA recommended Dissolution Method for Dextromethorphan Polistirex Suspension (Extended Release)

REVIEW OF AN AMENDMENT

1. EXECUTIVE SUMMARY

This is a review of an amendment related to the deficiencies issued to the firm in the Complete Response (CR) letter dated 07/14/2015[1]. The deficiency comments include: 1) lack of complete (100%) analytical raw data for the fasting (#ARL/10/408) and fed (#ARL/10/409) BE studies; 2) lack of concentration and pharmacokinetic SAS dataset of dextromethorphan for the fasting study (#ARL/10/408), (b) (4) (b) (4) orange flavored test product formulation was provided).

In the original submission dated 07/08/2011, Amneal Pharmaceuticals submitted the results of fasting (#ARL/10/408) and fed (#ARL/10/409) bioequivalence (BE) studies comparing the test product, Dextromethorphan Polistirex Extended Release Oral Suspension, EQ 30 mg HBr/5 mL to the corresponding reference product, RECKITT BENCKISER LLC's Delsym® (dextromethorphan polistirex) Extended Release Suspension, EQ 30MG HBr/5mL. Each of the BE studies was designed as a single-dose, two-way crossover study in healthy male and female subjects.

In the amendment dated 07/14/2016, the firm's response to the CR letter is found inadequate due to lack of analytical raw numerical data for the fed BE study (#ARL/10/409). The deficiency was communicated to the firm via an Easily Correctible Deficiency (ECD) letter on 11/08/2016, and the firm submitted its response on 11/10/2016. The firm's response is found adequate. As a result, the firm's fasting (#ARL/10/408) and fed (#ARL/10/409) BE studies are considered adequate.

Per original BE review[2], the office of study integrity and surveillance (OSIS) inspection status of the clinical and analytical sites for the current ANDA is considered completed.

As a result, the application is **adequate** without deficiency.

---

2. TABLE OF CONTENTS

3. SUBMISSION SUMMARY

3.1 Background

- According to the Orange Book (OB), this is an over-the-counter (OTC) product[3]. There is product-specific draft bioequivalence (BE) guidance available for Dextromethorphan Polistirex Extended Release Oral Suspension[4]. The guidance recommends the BE should be established based on 90% CI of parent drug dextromethorphan, and the active metabolite (dextrorphan) data as supportive evidence of comparable therapeutic outcome.

  In the original submission, the firm submitted the results of fasting (No. ARL/10/408) and fed (No. ARL/10/409) BE studies comparing a test product , Amneal Pharmaceuticals' Dextromethorphan Polistirex Extended Release Oral Suspension, EQ 30 mg HBr/5 mL, to the corresponding reference product, RECKITT BENCKISER LLC's Delsym® (dextromethorphan polistirex) Extended Release Oral Suspension, EQ 30MG HBr/5mL. Each of the BE studies was designed as a single-dose, two-way crossover study in healthy male and female subjects.

- The firm submitted the plasma concentration and pharmacokinetic (PK) data for the parent drug, dextromethorphan and active metabolite, dextrorphan. The data for the active metabolite (dextrorphan) is provided as supportive evidence. BE evaluation was made based on the data of the parent compound (dextromethorphan). The results of dextromethorphan are summarized in the tables below (firm calculated):

Fasting Study (ARL/10/408)

Parent Drug: Dextromethorphan Dextromethorphan Polistirex Extended Release Suspension, EQ 30 mg HBr/5 mL Dose (2X EQ 30 mg Dextromethorphan HBr), N=53 (Male = 44 and Female = 9) Least Squares Geometric Means, Ratio of Means, and 90% Confidence Intervals					
Fasted Bioequivalence Study (Study No. ARL/10/408)					
Parameter	**Test**	**Reference**	**Ratio**	**90% C.I.**	
AUC0-t (ng*hr/mL)	25.06	23.31	107.53	102.60	112.69
AUC0-inf (ng*hr/mL)	25.51	23.74	107.44	102.57	112.54
Cmax (ng/mL)	1.97	1.77	111.26	106.58	116.14

[3] Electronic Orange Book, search: Delsym; Last accessed Feb 10, 2015

[4] http://www fda.gov/downloads/Drugs/GuidanceComplianceRegulatoryInformation/Guidances/ucm085592.pdf

Fed Study (ARL/10/409)

Parent Drug: Dextromethorphan Dextromethorphan Polistirex Extended Release Suspension, EQ 30 mg HBr/5 mL Dose (2 X EQ 30 mg Dextromethorphan HBr), N=53 (Male = 43 and Female = 10) Least Squares Geometric Means, Ratio of Means, and 90% Confidence Intervals					
Fed Bioequivalence Study (Study No. ARL/10/409)					
Parameter	**Test**	**Reference**	**Ratio**	**90% C.I.**	
AUC0-t (ng*hr/mL)	34.92	33.63	103.84	96.8629	111.3172
AUC0-inf (ng*hr/mL)	35.53	34.21	103.87	96.9404	111.2928
Cmax (ng/mL)	2.38	2.29	104.16	95.8039	113.2506

- Per original BE review [**GDRP, ANDA 203133, Bioequivalence Primary Review, Yun Wang(4), Completion Date: 2/24/2015**][5], the PK parameters of the test and reference for the active metabolite (dextrorphan) were comparable. However, the application was found inadequate due to 1) inadequate fasting and fed BE studies as a result of lack of complete analytical raw data for both the fasting and fed BE studies, and lack of concentration and pharmacokinetic data of dextromethorphan in SAS transport files (.xpt) for fasting BE study; (b) (4) orange flavored test product formulation was provided).

- The deficiencies were communicated to the firm via Complete Response (CR) letter issued on 07/14/2015[6]. The firm then submitted its responses for aforementioned deficiencies issued by the Division of Bioequivalence III (DBIII) in an amendment dated 07/14/2016. The firm's response was originally found inadequate due to failure to submit 100% raw numerical data for its fed BE study (#ARL/10/409), and the deficiency was communicated to the firm via an ECD letter on 11/08/2016. The firm submitted its response to the ECD letter on 11/10/2016.

3.2 Drug Product Information and Relevant DB History

The drug information[7] has not changed since the most recent review completed on 2/24/2015. For more information, please refer to the following reviews and draft guidance:

5. REVIEW OF CURRENT AMENDMENT

The firm's response to the three (3) deficiencies on 7/14/2016, the ECD letter on 11/10/2016, and the reviewer's evaluations of those responses are provided in this section of the review.

Deficiency #1:

You did not submit ALL analytical raw numerical data. Please provide complete (100%) raw numerical data, in the instrument printout format, including original and repeated analysis for all samples, including the data of peak area/height for the analyte, peak area/height for the internal standard, ratio of the peak area/height for the analyte to the peak area/height for the internal standard, dilution factor (if any), and the corresponding concentration for each assayed and reassayed sample of all samples, calibration standard concentration samples, and quality control samples for your fasting (#ARL/10/408) and fed (#ARL/10/409) BE studies.

Firm's Response to Deficiency #1:

Amneal acknowledges the Agency's comment and requested all analytical raw numerical data from (b) (4)

Please note that as per section VII(c) of the Guidance for Industry "Bio-analytical Method Validation", May 2001; "For pivotal bioequivalence studies for marketing, chromatograms

from 20% of serially selected subjects should be included." Based on this requirement, chromatograms for 20% of subject were included in the reports for both studies.

For Study #ARL/10/408 (Fasting), a total of 58 subjects were enrolled in the study, samples for Subject No. (b) (6) (withdrawn due to adverse event in period II) were discontinued from study and were not analyzed as per Principal Investigator's discretion (refer to the original application Sequence 0000). Please refer to Module 5.3.1.4 for **raw numerical data** for this study in the requested format.

For Study #ARL/10/409 (Fed), a total of 58 subjects were enrolled in the study. The samples from 4 subjects; Subject No (b) (6) (withdrawn due to non-compliance to fed condition in period I), Subject No. (b) (6) (withdrawn due to adverse event in period I), Subject No. (b) (6) (withdrawn due to personal reasons before dosing in period I) and Subject No. (b) (6) (withdrawn due to adverse event in period II) were discontinued from study and were not analyzed as per Principal Investigator's discretion (refer to the original application Sequence 0000).

Subject No. (b) (6) showed pre-dose concentration greater than 5% of C_{max} in period II. The samples for this subject were analyzed but were not considered for calculation of bioequivalence result as per section **8.0 Statistical Plan** of the Study Protocol. Please refer to Module 5.3.1.4 for **raw numerical data** for this study in the requested format.

Additionally, there were two batches (REPETITION01 and REPETITION02) that were repeated under Code-A (sample outside assay range). The sample list report (Sequence) for these two batches demonstrates that samples were repeated with dilution factor (User Divisor). Please refer to **Module 5.3.1.4** for the sample list report for the Study #ARL/10/409 (Fed).

Reviewer's Comments on Firm's Response to Deficiency #1: The firm's response to Deficiency #1 is **adequate.**

- In the amendment dated 07/14/2016, the firm submitted all raw data for dextromethorphan and dextrorphan in the fasting BE study. However, the firm only provided a repeat list for reassay samples, but not provided the original raw numerical data for repeat samples for the fed BE study. Therefore, the reviewer could not verify the fed study repeats and batch rejection. The firm was then asked to submit the complete raw numerical data for calibration standards, QC samples and study samples, such as peak area of analyte and internal standard, calculated concentration, etc. for all subject samples (assayed and reassayed) in the fed BE study via an ECD letter on 11/08/2016. The firm submitted its response on 11/10/2016 and provided the information.

- The reviewer's evaluation for the fasting study repeat is discussed as below:

    1. Repeat Analysis due to "sample outside assay range":

Per the original BE review, there were one hundred and fifty seven (157) samples in the fasting study that were reanalyzed for dextromethorphan under the reason of "sample outside assay range". The firm submitted all raw data for the fasting BE study. As subject No.(b) (6) was excluded for dextromethorphan due to pre-dose concentrations exceeding 5% of Cmax, which was in accordance with the firm's protocol (Study Code: ARL/10/408, Version 03), the reviewer did not further check reassays for this subject but verified the pre-dose concentration for subject No(b) (6) in Period II (1.595 ng/mL) is more than 5% of Cmax (19.010 ng/mL) of the respe ive period. The reviewer notes that the original measured concentrations of these samples exceed the ULOQ (10.095 ng/mL). The repeat analysis listed in Table 7.8.1 in the firm's fasting BE bioanalytical report were selected according to SOP (b) (4) (Standard Operating Procedure For Repeat Sample Analysis, Effective Date: (b) (4)). All the reassayed values after correction with the dilution factor were ≥85% of the ULOQ.

2. There were also two (2) samples (05/X/T08 and 06/Y/T01) in the fasting study reanalyzed for dextrophan under the reason "Inconsistent Internal Standard Area Response":

7.8.3 Sample Repeat Analysis of Dextrorphan: Analytical Repeat:

Sr. No.	Sample ID	Assay-1 Conc. (ng/mL)	Run ID	Code	Assay-2 Conc. (ng/mL)	Run ID	Final Reported value (ng/mL)
1	05/X/T08	1.181	ARL_10_408_SUB_05	B	1.244	ARL_10_408_SUB_Repetition_03	1.244
2	06/Y/T01	BLQ	ARL_10_408_SUB_06	B	BLQ	ARL_10_408_SUB_Repetition_03	BLQ

The firm's SOP (b) (4) (Repeat Sample Analysis, Effective Date: (b) (4) has predefined the reason as the following:

Analyst/group leader/ designee will calculate the mean internal standard response in the batch by considering all samples of the batch including calibration curve and quality control samples (excluding system suitability and blank samples).

Analyst/group leader/designee will identify the sample in the batch having internal standard response beyond ±50% of mean internal standard response in the batch and those samples will be repeated in singlet.

The reviewer verified the repeats based on the firm's raw data. In addition, the reanalyzed value is consistent with the original value, with only up to 5.33% difference, the reviewer considers it acceptable.

- The reviewer's evaluation for the fed study repeat is discussed as below:

1. Per original BE review, there were one hundred and thirty four (134) samples in the fed study that were reanalyzed for dextromethorphan under the reason of "sample outside assay range". The reviewer notes that the original measured concentrations of these samples exceed the ULOQ (10.151 ng/mL), and the reanalysis of these

samples was per SOP [redacted] (Standard Operating Procedure for Repeat Sample Analysis, Effective Date: [redacted]. All the reassayed values after correction with the dilution factor were ≥85% of the ULOQ.

2. Repeat Analysis due to "inconsistent internal standard area response":

   Per the original BE review, there were nineteen (19) samples reanalyzed for dextromethorphan and 16 samples reanalyzed for dextrorphan in the fed study under the reason of "inconsistent internal standard area response". The reviewer randomly selected some samples repeated due to this reason and checked the original raw data, and considers the reanalysis is per SOP [redacted](Standard Operating Procedure for Repeat Sample Analysis, Effective Date: [redacted]).

3. Batch Rejection

   Per the original BE review, there was one rejected batch in the fed BE study (Run ID: SUB_29) for dextromethorphan and dextrorphan (simultaneous detection) due to interference in CS0 at analyte retention time & multiple reaction monitoring (MRM) more than 20% of LLOQ area. The reviewer checked the raw data for both dextromethorphan and dextrorphan, and confirmed the reason. The rejection of this analytical run is per SOP [redacted](Batch Acceptance of Subject Sample Analysis, Effective Date: [redacted]), which defines the following: *In blank matrix, response of the interfering peaks, if any, at the retention time and MRM of analyte(s) and internal standard should be ≤20% of the extracted CS-I (LLOQ) response for analyte(s) and ≤5% of the extracted mean internal standard response, respectively*.

Deficiency #2:

You did not submit concentration and pharmacokinetic data of dextromethorphan in SAS transport files (.xpt) for fasting (#ARL/10/408) study subjects. Instead, you provided concentration and pharmacokinetic data of dextromethorphan in SAS transport files (.xpt) for fed (#ARL/10/409) study in duplicated. Therefore, please submit dextromethorphan concentration and pharmacokinetic data for the fasting study in SAS transport format.

Firm's Response to Deficiency #2:

Amneal acknowledges the Agency's comment and would like to clarify that this was an inadvertent error. For ease of review, all SAS files and define documents submitted in the original application (Sequence 0000) have been removed using the 'delete' lifecycle function and the correct datasets for both fasting (#ARL/10/408) and fed (#ARL/10/409) studies have been added to the application as 'new' along with the respective define documents. This gives the opportunity to place the files in the appropriate eCTD location with the proper naming convention. Please refer to the define document for **fasting study #ARL/10/408** and **fed study #ARL/10/409** for further information.

Reviewer's Comments on Firm's Response to Deficiency #2: The firm's response to deficiency #2 is **adequate.**

- The firm submitted the concentration and pharmacokinetic data of dextromethorphan and dextrorphan in SAS transport files (dmo-onc.xpt and dmo-pk for dextromethorphan and do-conc.xpt and do-pk for dextrorphan) for fasting (#ARL/10/408) study subjects. The firm did not report the concentration for subject Nos. (b) (6) in their SAS dataset due to pre-dose concentrations exceeding more than 5% of Cmax of corresponding subject. The reviewer verified the concentration from firm submitted raw dataset, which the pre-dose concentration in subject No. (b) (6) Period II, subject No. (b) (6) Period II, subject No (b) (6) Period II, and subject No. (b) (6) Period II, is greater than 5% of their Cmax in corresponding period, which is 16.869, 16.294, 19.010 and 18.164 ng/mL, respectively. The reviewer conducted SAS analysis for BE assessment, as the following, and the results are consistent with the firm's reported results.

Dextromethorphan, N=53*

Dextromethorphan Polistirex Extended Release Suspension, EQ 30 mg HBr/5 mL Dose (10 ml, EQ 60 mg Dextromethorphan HBr) Least Squares Geometric Means, Ratio of Means, and 90% Confidence Intervals					
Fasting Bioequivalence Study (Study No. ARL/10/408), Dextromethorphan N=53 (Male = 44 and Female = 9)					
Parameter	**Test**	**Reference**	**Ratio**	**90% C.I.**	
AUC0-t (ng*hr/mL)	25.07	23.34	1.07	102.51	112.57
AUC0-inf (ng*hr/mL)	25.51	23.76	1.07	102.51	112.47
Cmax (ng/mL)	1.97	1.77	1.11	106.58	116.14

* Subjects No. (b) (6) were excluded from statistical analysis for dextromethorphan due to pre-dose concentrations exceed more than 5% of Cmax.

Dextrorphan, N=57 (supporting evidence)

Dextromethorphan Polistirex Extended Release Suspension, EQ 30 mg HBr/5 mL Dose (10 ml, EQ 60 mg Dextromethorphan HBr) Least Squares Geometric Means, Ratio of Means, and 90% Confidence Intervals					
Fasting Bioequivalence Study (Study No. ARL/10/408), Dextrorphan N=57 (Male = 48 and Female = 9)					
Parameter	**Test**	**Reference**	**Ratio**	**90% C.I.**	
AUC0-t (ng*hr/mL)	11.79	10.27	1.15	109.89	120.06
AUC0-inf (ng*hr/mL)	12.24	10.65	1.15	110.13	119.77
Cmax (ng/mL)	1.20	1.00	1.20	115.26	125.11

Arithmetic Mean Parameters and Ratios

Dextrorphan, N=57

		Test				Reference				Ratio
Parameter	Unit	Mean	CV%	Min	Max	Mean	CV%	Min	Max	(T/R)
AUCT	ng hr/mL	13.124	42.01	2.14	26.87	11.503	42.10	1.86	25.86	1.14
AUCI	ng hr/mL	13.390	40.61	3.38	27.76	11.736	40.65	2.75	26.09	1.14
CMAX	ng/mL	1.446	47.76	0.08	3.44	1.201	44.44	0.07	2.27	1.20
TMAX	hr	5.000	.	2.00	7.00	5.000	.	1.50	14.00	1.00
KE	hr-1	0.111	43.00	0.01	0.22	0.107	38.14	0.01	0.19	1.03
THALF	hr	10.306	148.25	3.08	107.72	9.051	95.98	3.62	46.90	1.14

- As shown from the above tables, the 90% confidence intervals (CIs) of the ratios of Ln-transformed means for LnCmax, LnAUC0-t and LnAUC0-∞ of dextromethorphan in the fasting BE study are within the limits of 80.00-125.00%. The PK parameters of the test and reference for the active metabolite, dextrorphan, were comparable (T/R ratio was within 0.8- 1.25), and therefore are supportive. The 90% CI for the least squares geometric mean of LnCmax for dextrorphan is 115.26-125.11%, which slightly falls out of the BE acceptance range of 80.00 - 125.00%. However, per draft product specific BE guidance of dextromethorphan polistirex[8], BE evaluation was made based on the data of the parent compound (dextromethorphan).

Deficiency #3:

(b) (4)

[redacted]

[8] http://www fda.gov/downloads/Drugs/GuidanceComplianceRegulatoryInformation/Guidances/ucm085592.pdf

Firm's Response to Deficiency #3:

Amneal acknowledges the Agency's comment. (b) (4) Please refer to the Amneal's response provided to **Comment #6** in the Product Quality section.

Reviewer's Comments on Firm's Response to Deficiency #3:

(b) (4) n its response to Comment #6 in the Product Quality section, which is as the following:

(b) (4)

The firm's response to deficiency #3 is **adequate.**

Deficiency #4:
For Future Submissions
You used a non-standard high-fat vegetarian breakfast in the fed BE study (#ARL/10/409). Currently, there is no adequate data from which to conclude that a high-fat vegetarian breakfast served prior to dosing in BE studies under a fed state will have the same effect on drug absorption as the standard FDA high-fat breakfast using meat as the main protein source. Therefore, the DBIII does not encourage the use of vegetarian meals for breakfast in future fed BE study.

Firm's Response to Deficiency #4:

Amneal acknowledges the Agency's comment. Please note that fed study # ARL/10/409 was conducted in February 2011, since then the Agency has discouraged the use non-standard high-fat vegetarian breakfast in fed studies. Amneal has adopted the standard of requesting that all CROs to use meat as the main protein source for high-fat breakfast in fed studies.

Reviewer's Comments on Firm's Response to Deficiency #4:

The firm's response to deficiency #4 is **adequate.**

6. DEFICIENCY COMMENTS

N/A.

7. RECOMMENDATIONS

1. The Division of Bioequivalence III (DBIII) **accepts** the fasting bioequivalence (BE) study (#ARL/10/408) conducted by Amneal Pharmaceuticals on its Dextromethorphan Polistirex Extended Release Oral Suspension, EQ 30MG HBr/5mL, Batch # BB-ST-10012B, comparing it to RECKITT BENCKISER LLC's Delsym® (dextromethorphan polistirex) Extended Release Suspension, EQ 30MG HBr/5mL, Batch # 54554.

2. The DBIII finds the fed BE study (#ARL/10/409) **accepts** the fed BE study (#ARL/10/409) conducted by Amneal Pharmaceuticals on its Dextromethorphan Polistirex Extended Release Oral Suspension, EQ 30MG HBr/5mL, Batch # BB-ST-10012B, comparing it to RECKITT BENCKISER LLC's Delsym® (dextromethorphan polistirex) Extended Release Suspension, EQ 30MG HBr/5mL, Batch # 54554.

BIOEQUIVALENCE COMMENTS TO BE PROVIDED TO THE APPLICANT

ANDA:	203133
APPLICANT:	Amneal Pharmaceuticals
DRUG PRODUCT:	Dextromethorphan Polistirex Extended Release Suspension, EQ 30 mg HBr/5 mL

The Division of Bioequivalence III (DBIII) has completed its review and has no further questions at this time.

The bioequivalence comments provided in this communication are comprehensive as of issuance. However, these comments are subject to revision if additional concerns raised by chemistry, manufacturing and controls, microbiology, labeling, other scientific or regulatory issues or inspectional results arise in the future. Please be advised that these concerns may result in the need for additional bioequivalence information and/or studies, or may result in a conclusion that the proposed formulation is not approvable.

Sincerely yours,

{See appended electronic signature page}

Nilufer M. Tampal, Ph.D.

The deficiencies presented below represent *EASILY CORRECTABLE DEFICIENCY* identified during the full ANDA review and the current ANDA review cycle will remain open. The following comment should be communicated to the firm.

Deficiency Related to the Fed Bioequivalence (BE) Study (#ARL/10/409)

In the amendment submission date July 14, 2016, you only submitted the complete (100%) raw numerical data for the fasting BE study (#ARL/10/408) and sample list report for two repeated batches for the fed BE study (#ARL/10/409), but did not submit **ALL** analytical raw numerical data for your fed BE study (#ARL/10/409). Please provide complete (100%) raw numerical data, in the instrument printout format, including original and repeated analysis for all samples, including the data of peak area/height for the analyte, peak area/height for the internal standard, ratio of the peak area/height for the analyte to the peak area/height for the internal standard, dilution factor (if any), and the corresponding concentration for each assayed and reassayed sample of all samples, calibration standard concentration samples, and quality control samples for your fed (#ARL/10/409) BE study.

1 EXECUTIVE SUMMARY

This application contains the results of fasting and fed bioequivalence (BE) studies comparing a test product , Amneal Pharmaceuticals' Dextromethorphan Polistirex Extended Release Oral Suspension, EQ 30 mg HBr/5 mL, to the corresponding reference product, RECKITT BENCKISER LLC's Delsym® (dextromethorphan polistirex) Extended Release Oral Suspension, EQ 30MG HBr/5mL. According to the Orange Book (OB), this is an over-the-counter (OTC) product[1]. Each of the BE studies was designed as a single-dose, two-way crossover study in healthy male and female subjects.

The firm submitted the plasma concentration and pharmacokinetic data for the parent drug, dextromethorphan and active metabolite, dextrorphan. The data for the active metabolite (dextrorphan) is provided as supportive evidence. BE evaluation was made based on the data of the parent compound (dextromethorphan). The results of dextromethorphan are summarized in the tables below (firm calculated):

Fasting Study (ARL/10/408)

Parent Drug: Dextromethorphan Dextromethorphan Polistirex Extended Release Suspension, EQ 30 mg HBr/5 mL Dose (2X EQ 30 mg Dextromethorphan HBr), N=53 (Male = 44 and Female = 9) Least Squares Geometric Means, Ratio of Means, and 90% Confidence Intervals					
Fasted Bioequivalence Study (Study No. ARL/10/408)					
Parameter	**Test**	**Reference**	**Ratio**	**90% C.I.**	
AUC0-t (ng*hr/mL)	25.06	23.31	107.53	102.60	112.69
AUC0-inf (ng*hr/mL)	25.51	23.74	107.44	102.57	112.54
Cmax (ng/mL)	1.97	1.77	111.26	106.58	116.14

Fed Study (ARL/10/409)

Parent Drug: Dextromethorphan Dextromethorphan Polistirex Extended Release Suspension, EQ 30 mg HBr/5 mL Dose (2 X EQ 30 mg Dextromethorphan HBr), N=53 (Male = 43 and Female = 10) Least Squares Geometric Means, Ratio of Means, and 90% Confidence Intervals					
Fed Bioequivalence Study (Study No. ARL/10/409)					
Parameter	**Test**	**Reference**	**Ratio**	**90% C.I.**	
AUC0-t (ng*hr/mL)	34.92	33.63	103.84	96.8629	111.3172
AUC0-inf (ng*hr/mL)	35.53	34.21	103.87	96.9404	111.2928
Cmax (ng/mL)	2.38	2.29	104.16	95.8039	113.2506

[1] Electronic Orange Book, search: Delsym; Last accessed Feb 10, 2015

The pharmacokinetic parameters of the test and reference for the active metabolite (dextrorphan) were comparable. Therefore, the metabolite data are supportive. However, the firm's fasting and fed BE studies are **inadequate** due to lack of analytical raw data and concentration and pharmacokinetic data of dextromethorphan in SAS transport files (.xpt) for fasting study subjects.

(b) (4)

Office of Study Integrity and Surveillance (OSIS):

The current ANDA is NOT a parent with a pending Office of Study Integrity and Surveillance (OSIS) inspection. Based on evaluation of the submitted data, the OSIS inspections of the clinical sites and analytical site for the current ANDA are not necessary. The studies submitted in the current ANDA do not indicate any conduct issues and no data integrity deficiencies were identified by the reviewer.

(b) (4)

In addition, because the current ANDA is considered low risk based on the data submitted, the OSIS inspection is not expected to impact the current study outcome. The OSIS inspection is complete.

The application is **inadequate** with deficiencies.

(b) (4)

2 TABLE OF CONTENTS

3 SUBMISSION SUMMARY

3.1 Drug Product Information[3]

Test Product	Dextromethorphan Polistirex Extended Release Oral Suspension, EQ 30MG HBr/5mL
Reference Product*	**Delsym®** (dextromethorphan polistirex) Extended Release Suspension, EQ 30MG HBr/5mL
RLD Manufacturer	RECKITT BENCKISER LLC
NDA No.	018658
RLD Approval Date	October 8, 1982
Indication[4]	DELSYM® is an OTC product which according to its label temporarily relieves (i) cough due to minor throat and bronchial irritation as may occur with the common cold or inhaled irritants, and (ii) the impulse to cough to help you get to sleep.

* Please note that the Orange Book lists DELSYM® as an over-the counter (OTC) drug product.

3.2 PK/PD Information[5,6]

Bioavailability	Dextromethorphan is rapidly absorbed from the GI tract
Food Effect	May be taken with or without food.
Tmax	Approximately 5-6 hours
Metabolism	It undergoes rapid and extensive hepatic metabolism to demethylated metabolites including the active metabolite, dextrorphan. Dextromethorphan is primarily metabolized by cytochrome P450 2D6 isoenzymes. The rate of metabolism varies between individuals according to phenotype (extensive or poor metabolizers).
Excretion	Excretion is primarily by renal elimination of metabolites; some drug is excreted unchanged.
Half-life	The plasma half-life is normally about 11 hours
Dosage and Administration	Shake well prior to administration. Administer using a calibrated measuring device. Adults and Adolescents (Age >12 years): 10 ml (60 mg) PO every 12 hours, not to exceed 20 ml (120 mg) PO daily. Children (6< Age <12 years): 5 ml (30 mg) PO every 12 hours, up to 10 ml (60 mg) PO daily. Children (4< Age <6 years): 2.5 ml (15 mg) PO every 12 hours, up to 5 ml (30 mg) PO daily. Age < 4 years: Do not use

Maximum Daily Dose	•Adults, Elderly, Adolescents (Age ≥12 years) 120 mg/day PO •Children 6≤ Age <12 years: 60 mg/day PO 4≤ Age <6 years: 30 mg/day PO Age < 4 years: Do not use

3.3 OGD Recommendations for Drug Product

Number of studies recommended:	2 studies

1.	**Type of study:**	Fasting
	Design:	Single-dose, two-treatment, two-period crossover in-vivo
	Strength:	30 mg/5 mL
	Subjects:	Normal healthy males and females, general population
	Additional Comments:	N/A

2.	**Type of study:**	Fed
	Design:	Single-dose, two-treatment, two-period crossover in-vivo
	Strength:	30 mg/5 mL
	Subjects:	Normal healthy males and females, general population
	Additional Comments:	N/A

Analytes to measure (in plasma/serum/blood):	Dextromethorphan and its metabolite Dextrorphan in plasma
Bioequivalence based on:	90% CI of dextromethorphan Please submit the metabolite data as supportive evidence of comparable therapeutic outcome. For the metabolite, the following data should be submitted: individual and mean concentrations, individual and mean pharmacokinetic parameters, and geometric means and ratios of means for AUC and Cmax.
Waiver request of in-vivo testing:	N/A
Source of most recent recommendations or provide the link to the current draft guidance:	The current BE recommendations for the drug product are listed in the Draft Guidance for Industry: Bioequivalence Recommendations for Specific Products. FDA Guidance for Industry: Draft Guidance on Dextromethorphan Polistirex Extended Release Oral Suspension http://www.fda.gov/downloads/Drugs/GuidanceComplianceRegulatoryInformation/Guidances/ucm085592.pdf (recommended May 2008)

Summary of OGD or DB History	Pending ANDAs (Not Yet Reviewed)	Yes (ANDAs (b) (4) and 203133)
	Approved ANDAs	Yes (ANDA 091135)
	Previously Reviewed ANDAs	Yes
	Protocols	No
	Controls	Yes
	Citizen Petitions	No

3.4 Pre-Study Bioanalytical Method Validation

3.4.1 Full Method Validation

Parent Drug: Dextromethorphan

Information Requested	Data
Bioanalytical method validation report location	Module 5.3.1.4, Report No. ARL/REP/MI/019DMX/01
Analyte	Dextromethorphan

3.4.2 Partial Method Validation

Study ARL/10/408 & ARL/10/409

Information Requested	Data
Bioanalytical method validation report location	Module 5.3.1.4, Report No. ARL/REP/MI/019DMX/01, Amendment No: 02
Amendment Purpose	Check effect of concomitant drug such as Pseudoephedrine, Caffeine, Guaifenesin, Paracetamol and Ibuprofen by processing six replicates of LQC, MQC, HQC and H1QC spiked with all above drugs and Dextromethorphan and Dextrorphan.
Analyte	Dextromethorphan and Dextrorphan
Internal standard (IS)	Dextromethorphan-d3 and Dextrorphan-d3
Method description	Solid Phase Extraction, and HPLC-MS/MS
Limit of quantitation	For Dextromethorphan: 0.011 ng/mL For Dextrorphan: 0.011 ng/mL
Standard curve concentrations (ng/mL)	For Dextromethorphan: 0.011 ng/mL to 10.275 ng/mL For Dextrorphan: 0.011 ng/mL to 10.919 ng/mL
QC concentrations (ng/mL)	For Dextromethorphan: LQC : 0.030 ng/mL MQC : 3.095 ng/mL HQC : 7.222 ng/mL H1QC : 10.172 ng/mL For Dextrorphan: LQC : 0.032 ng/mL MQC : 3.286 ng/mL HQC : 7.667 ng/mL H1QC : 10.799 ng/mL

QC precision range with concomitant drugs (%)	For Dextromethorphan: LQC : 3.40% MQC : 1.79% HQC : 0.78% H1QC : 1.94% For Dextrorphan: LQC : 7.75% MQC : 2.02% HQC : 0.77% H1QC : 1.33%
QC accuracy range with concomitant drugs (%)	For Dextromethorphan: LQC : 101.11% MQC : 100.09% HQC : 97.30% H1QC : 98.04% For Dextrorphan: LQC : 104.17% MQC : 98.62% HQC : 98.63% H1QC : 100.09%
Conclusion	The concomitant drug effect for drugs such as Pseudoephedrine, Caffeine, Guaifenesin, Paracetamol and Ibuprofen to Dextromethorphan and Dextrorphan was found to be absent.

Study ARL/10/409

Information Requested	Data
Bioanalytical method validation report location	Module 5.3.1.4, Report No. ARL/REP/MI/019DMX/01, Amendment No: 03, 04
Amendment Purpose	1. Detection system changed from API 5500 (MI/01/020/0012) to Waters TQS (MI/03/020/0003) 2. Injection volume modified from 10.0 to 5.0 µL 3. Incorporated Cross selectivity, Processed sample stability (22 Hrs) and Haemolysis effect. 4. Incorporated Stock solution stability (40 days) and Whole Blood Stability (2 Hrs) 5. Incorporated Long Term Stability in Matrix at -70°C ±10°C for 475 days.
Analyte	Dextromethorphan and Dextrorphan
Internal standard (IS)	Dextromethorphan-d3 and Dextrorphan-d3
Method description	Solid Phase Extraction, and UPLC-MS/MS The firm noted: As Dextromethorphan and its metabolite Dextrorphan is light sensitive molecule, all activities like solution preparation, sample handling, sample transfer, sample processing and sample analysis was carried out under sodium vapour lamp.

Limit of quantitation	For Dextromethorphan: 0.010 ng/mL For Dextrorphan: 0.010 ng/mL
Standard curve concentrations (ng/mL)	For Dextromethorphan: 0.010 ng/mL to 10.151 ng/mL For Dextrorphan: 0.010 ng/mL to 10.178 ng/mL
QC concentrations (ng/mL)	For Dextromethorphan: LLQC : 0.010 ng/mL LQC : 0.030 ng/mL MQC : 3.069 ng/mL HQC : 7.130 ng/mL For Dextrorphan: LLQC : 0.010 ng/mL LQC : 0.030 ng/mL MQC : 3.079 ng/mL HQC : 7.154 ng/mL
QC precision range (%)	For Dextromethorphan: LLQC : 0.00% LQC : 1.82% MQC : 0.76% HQC : 1.12% For Dextrorphan: LLQC : 5.00% LQC : 1.37% MQC : 0.89% HQC : 1.57%
QC accuracy range (%)	For Dextromethorphan: LLQC : 100.00% LQC : 94.44% MQC : 99.04% HQC : 101.53% For Dextrorphan: LLQC : 103.33% LQC : 99.44% MQC : 100.70% HQC : 102.83%
Processed sample stability (hrs)	22 Hrs at room temperature
Stock solution stability (days)	40 days at 2ºC to 8ºC
Whole blood stability (hrs)	2 hours
Cross Selectivity	% Interference For Dextromethorphan : 5.90% For Dextrorphan: 1.36%

Long Term Stability in Matrix (-70°C ±10°C)	Results: For Dextromethorphan LQC: -3.11% HQC: -0.45% For Dextrorphan LQC: 13.86% HQC: -0.57% Acceptance Criteria: % Difference: NMT± 15% when compared with initial long term analysis respective QC data Conclusion: Long term stability in matrix is established for 475 days.

SOPs submitted	Yes
Does the duration of the each of the LTSS stability parameters support the sample preparation and assay dates	Yes

Comments on the Pre-Study Method Validation:

- The firm used a validated Liquid Chromatography-Tandem Mass Spectrometry (LC-MS/MS method) to **simultaneously** measure plasma concentrations of dextromethorphan and dextrorphan for the fasting and fed BE studies. Dextromethorphan-d3 and dextrorphan-d3 were used as the internal standard.

- Sodium heparin was used as the anticoagulant for the preparation of the calibration curves and quality control (QC) samples in the validation study, which was the same anticoagulant used in subject sample collection of the BE studies.

- The solid phase extraction method was used to recover dextromethorphan and dextrorphan from human plasma. The mean percent recovery values of dextromethorphan and its internal standard dextromethorphan-d3 are 61.95% and 65.11%, respectively. The mean percent recovery values of dextrorphan and its internal standard dextrorphan-d3 are 31.28% and 32.03%, respectively. The recovery percentages of dextromethorphan and dextrorphan for all QC concentrations are comparable to their internal standards. The % CV is 6.98% for dextromethorphan and 3.48% for dextromethorphan-d3, respectively. The % CV is 5.79% for dextrorphan and 3.60% for dextrorphan-d3, respectively.

- Per firm's submission[7], there are four method validation report amendments, which are listed as below:

[7] DARRTS ANDA 203133 0000(1) 07/08/2011 ORIG-1/Multiple Categories/Subcategories, Module 5.3.1.4, Reports of Bioanalytical and Analytical Methods for Human Studies, arl-10-409-bioanalyt-methval, Method Validation Report-Amendment No. 04, pp 296 of 508

Amendment No.	Details of Amendment	Date of Amendment
01	Method transferred from API 5000 (MI/01/020/0009) to API 5500 (MI/01/020/0012)	08/02/10
02	Concomitant Drugs Effect exercise performed	12/02/10
03	1. Detection system changed from API 5500 (MI/01/020/0012) to Waters TQS (MI/03/020/0003) 2. Injection volume modified from 10.0 to 5.0 µL 3. Incorporated Cross selectivity, Processed sample stability (22 Hrs) and Haemolysis effect. 4. Incorporated Stock solution stability (40 days) and Whole Blood Stability (2 Hrs)	02/06/11
04	Incorporated Long Term Stability in Matrix at -70ºC ±10ºC for 475 days.	02/06/11

However, the firm only submitted the amendments No. 02, 03 and 04. The firm did not provide method validation report amendment No. 01, which contains details about method transfer from MS/MS model API 5000 to API 5500. The reviewer verified the in-study bioanalytical report. MS/MS model API 5000 was used in the fasting study sample analysis. Therefore, method validation report amendment No. 01 does not apply to current study.

- The firm submitted the long-term storage stability (LTSS) data of dextromethorphan and dextrorphan in human plasma with sodium heparin as the anticoagulant for 475 days under storage conditions at -70ºC±10ºC. Both LTSS data exceed the storage period for the sample of fasting (43 days) and fed (58 days) BE studies.

- The calibration curve range in the method validation was established from 0.01 ng/mL to 10.168 ng/mL for dextromethorphan. The firm provided dilution integrity study for dextromethorphan (dilution factors as 2, 5 and 10). The Dilution integrity data is adequate to cover the C_{max} concentrations in fasting and fed BE studies.

- The pre-study method validations for dextromethorphan and dextrorphan are **adequate**.

Table 3. SOP's Dealing with Bioanalytical Repeats of Study Samples

SOP No.	Effective Date of SOP	SOP Title
(b) (4)		STANDARD OPERATING PROCEDURE FOR REPEAT SAMPLE ANALYSIS

Is there any other particular concern that should be investigated further?	No.

Comments from the Reviewer:

1. In the fasting study, a total of 166 samples (5.2%) were reanalyzed out of 3187 study samples for dextromethorphan. A total of 3 samples (0.1%) were reanalyzed out of 3187 study samples for metabolite dextrorphan. In the fed study, a total of 213 samples (5.2%) were reanalyzed out of 3020 study samples for dextromethorphan. A total of 72 samples (2.4%) were reanalyzed out of 3020 study samples for dextrorphan.

2. There were one hundred and fifty seven (157) samples in the fasting study and one hundred and thirty four (134) samples in the fed study that were reanalyzed for dextromethorphan under the reason of "sample outside assay range". The upper limit of calibration standard curve for dextromethorphan is 10.168 ng/mL. All reassy values after dilution and correction with the dilution factors (5 fold) were greater than 85% of 10.168 ng/mL. In addition, the firm had conducted acceptable pre-study dilution integrity study. The firm also submitted acceptable incurred sample reanalysis (ISR) data. However, the firm did not provide 100% analytical raw numerical data. The firm will be asked to provide this information for verification purpose.

3. There were nine (9) samples in the fasting study and four samples in the fed study that were reanalyzed for dextromethorphan under the reason of "positive pre-dose". The original values and repeat values are comparable. All values are slightly above LOQ (0.01 ng/mL) or BLQ. The reviewer deems those repeats are acceptable.

4. There were nineteen (19) samples in the fed study that were reanalyzed for dextromethorphan under the reason of "inconsistent internal standard area response". The SOP (b) (4) (Standard Operating Procedure for Repeat Sample Analysis; effective date (b) (4)) defines the inconsistent internal standard area response as the following: *the sample in the batch having internal standard response beyond ±50% of mean internal standard response in the batch including calibration curve and quality control samples (excluding system suitability and blank samples), and those samples will be repeated in singlet.* However, the firm did not provide the original analytical raw numerical data. The firm will be asked to provide this information for verification purpose.

5. There was one rejected batch in the fasting study (Run ID: ARL_10_408_SUB_07) for dextromethorphan and dextrorphan (simultaneous detection) due to autosampler error. Entire batch resubmitted as ARL_10_408_SUB_07_R after injecting system suitability. The rejection is in line with SOP # (b) (4) (Standard Operating Procedure for Batch Acceptance of Subject Sample Analysis; effective date (b) (4)).

6. There was one rejected batch in the fed study (Run ID: SUB_29) for dextromethorphan and dextrorphan (simultaneous detection) due to interference in CS0 at analyte retention time & multiple reaction monitoring (MRM) more than 20% of LLOQ area. The rejection is in line with SOP (b) (4) (Standard Operating Procedure for Batch Acceptance of Subject Sample Analysis; effective date (b) (4)), which states "*in blank matrix, response of the interfering peaks, if any, at the retention time and MRM of analyte(s) and internal standard should be ≤ 20% of the extracted CS-1 (LLOQ) response for analyte(s) and ≤ 5% of the extracted mean internal standard response, respectively*". However, the firm did not include the original data to support the reason for batch rejection. Therefore, the firm will be asked to submit the raw data for calibration standards, QC samples and study samples, such as peak area of analyte and internal standard, calculated concentration, etc. of the failed batch.

7. Overall, the reanalysis of study samples of the fasting and fed BE studies are **inadequate** per the above comments.

3.6 Waiver Request(s) For Modified Release Dosage Forms

N/A

3.7 Deficiency Comments

Deficiencies Related to the Bioequivalence Studies

1. The firm did not submit **ALL** analytical raw numerical data. The firm will be asked to provide complete (100%) raw numerical data including original and repeated analysis for all samples, including the data of peak area/height for the analyte, peak area/height for the internal standard, ratio of the peak area/height for the analyte to the peak area/height for the internal standard, dilution factor (if any), and the corresponding concentration for each assayed and reassayed sample of all samples, calibration standard concentration samples, and quality control samples for its fasting (#ARL/10/408) and fed (#ARL/10/409) BE studies..

2. The firm did not submit concentration and pharmacokinetic data of dextromethorphan in SAS transport files (.xpt) for fasting study subjects. Instead, the firm provided concentration and pharmacokinetic data of dextromethorphan in SAS transport files (.xpt) for fed study in duplicated. Therefore, the firm will be asked to submit dextromethorphan concentration and pharmacokinetic data for the fasting study in SAS transport format.

Deficiency Related to the Formulation

3. [redacted] (b) (4)

For Future Submissions

4. The firm used a non-standard high-fat vegetarian breakfast in the fed BE study (#ARL/10/409). Currently, there is no adequate data from which to conclude that a high-fat vegetarian breakfast served prior to dosing in BE studies under a fed state will have the same effect on drug absorption as the standard FDA high-fat breakfast using meat as the main protein source. Therefore, the DBIII does not encourage the use of vegetarian meals for breakfast in future fed BE study.

3.8 Recommendations

1. The Division of Bioequivalence III (DBIII) finds the fasting bioequivalence (BE) study (#ARL/10/408) **inadequate** due to the reason cited in the above deficiency comments. The Amneal Pharmaceuticals conducted the fasting study on its test product, Dextromethorphan Polistirex Extended Release Oral Suspension, EQ 30MG HBr/5mL, Batch # BB-ST-10012B, comparing it to RECKITT BENCKISER LLC's Delsym® (dextromethorphan polistirex) Extended Release Suspension, EQ 30MG HBr/5mL, Batch # 54554.

2. The DBIII finds the fed BE study (#ARL/10/409) **inadequate** due to the reason cited in the above deficiency comments. The Amneal Pharmaceuticals conducted the fed study on its test product, Dextromethorphan Polistirex Extended Release Oral Suspension, EQ 30MG HBr/5mL, Batch # BB-ST-10012B, comparing it to RECKITT BENCKISER LLC's Delsym® (dextromethorphan polistirex) Extended Release Suspension, EQ 30MG HBr/5mL, Batch # 54554.

No. of Groups	1
Washout Period	7 days
Randomization Scheme (Sequence of T and R)	**Yes,** **TR:** 2, 3, 5, 8, 9, 12, 14, 15, 17, 20, 22, 23, 25, 27, 29, 31, 33, 36, 38, 40, 42, 43, 46, 47, 49, 52, 53, 56 and 58 **RT:** 1, 4, 6, 7, 10, 11, 13, 16, 18, 19, 21, 24, 26, 28, 30, 32, 34, 35, 37, 39, 41, 44, 45, 48, 50, 51, 54, 55and 57
Blood Sampling Times	Pre-dose (collect within 1 hour prior to dosing), 1.00, 1.50, 2.00, 2.25, 2.50, 2.75, 3.00, 3.50, 4.00, 4.50, 5.00, 5.50, 6.00, 7.00, 8.00, 9.00, 10.00, 11.00, 12.00, 14.00, 17.00, 24.00, 30.00, 36.00, 48.00, 72.00, and 96.00 hours post-dose (72.00 and 96.00 hours samples were collected on ambulatory basis)
Blood Sample Processing & Storage (include storage temperature)	Blood samples were collected in sodium heparin vacutainer at desired sampling time point. Intravenous indwelling cannula was kept patent by injecting 0.2 mL of heparinized saline solution except for each ambulatory sample. Blood samples were collected after discarding the first 0.2 mL of heparinized blood from i.v. cannula. Centrifugation of the samples was done within 30 minutes after the last blood sample collection of respective time point. Blood samples were centrifuged at 5°C, at 3500 RPM for 10 minutes under refrigeration. Plasma was separated and placed in suitable labeled vials in two aliquots, one as analytical sample and the other as control sample. All the plasma samples were stored below -50°C until the analysis of the samples.

Comments on Study Design:

1. A total of 58 healthy adult subjects were enrolled in this study. 57 subjects completed the study. Data from 53 subjects were used in the dextromethorphan statistical analysis. Subject No. (b) (6) (period II) withdrew from the study due to adverse events including mild headache and moderate loose motion. Subjects No. (b) (6) were excluded from dextromethorphan analysis due to pre-dose concentrations exceed more than 5% of Cmax. However, those subjects were included in statistical analysis for metabolite dextrorphan. Therefore, the subjects included in the statistical analysis for dextromethorphan and dextrorphan are (b) (6) (b) (6), respectively.

2. Sodium heparin is used as anticoagulant in sample collection, which is consistent with pre-validated bioanalytical method.

3. The subjects were dosed with 10 ml Dextromethorphan Polistirex Extended Release Suspension EQ 30mg HBr/5ml (total EQ 60 mg Dextromethorphan HBr). The dose was selected based on the adult dosage in RLD labeling[8]. To ensure complete dosing of the oral suspension, the firm used a syringe which was held in upright position and was rotated 3-4 times in either direction to ensure thorough mixing prior to administration to the subjects' mouth. The syringe was then rinsed in a clean beaker with a part of water taken from the glass containing 240 ± 2 mL water. The rinsing solution and the remaining water were finally all administered to the subjects. The compliance for dosing was also assessed by a thorough check of the oral cavity by using a tongue depressor and torch immediately after dosing. The firm's study design and drug administration method are acceptable.

Reviewer's Comment:

1. The demographic profile is listed for dextromethorphan. Subjects No. (b) (6) (b) (6) were excluded from dextromethorphan statistical analysis due to pre-dose concentrations exceed more than 5% of Cmax. However, those subjects were included in statistical analysis for dextrorphan.

2. The firm did not give detailed BMI mean and range, but noted "*On protocol basis subjects were enrolled according to Life Insurance Corporation Chart*". The reviewer checked the fasting study protocol (Study Code: ARL/10/408, Version: 03, Date: November 15, 2010), the firm used "*body weight within ± 15% of ideal weight as related to height and body frame according to Life Insurance Corporation (LIC) Chart"* (attached below) as the study inclusion criteria. The reviewer justifies that the

study subjects' body weight distributes in the normal weight range (BMI: 18.5 – 25) and won't impact the outcome of the study.

[a] The laboratory parameter was normal during screening, but was found to be abnormal in the post-study evaluation. As the subject had received both the treatments, it is difficult to attribute this adverse event to either of the treatments.

Subjects Experiencing Emesis

Subject Number	Test/Reference	Period	Time Post-Dose	Duration Between Dosing and Emesis (hrs)
N/A				

Was the adverse event profile observed during the fasting bioequivalence study comparable for the test and reference product? Please comment.

The total number of subjects who reported adverse events following the administration of test product is slightly greater than the total number of subjects who reported adverse events following the administration of the reference product. Eight (8) adverse events were observed in seven subjects following the administration of the test product and two (2) adverse events were observed in two subjects following the administration of the reference product. In addition, there are five (5) adverse events noted in four subjects during post-study evaluation, which cannot be attributed to either test or reference treatment.

Are there any serious adverse events or death? If so, are they reported to the OGD Safety Committee?

No serious adverse events (SAEs) were reported during the fasting BE study.

Are there any other safety concerns based on the adverse event profile?

No.

Table 10. Protocol Deviations, Fasting Bioequivalence Study

Type	Subject #s (Test)	Subject #s (Ref.)
Deviation in scheduled time in blood sample collection	(b) (6)	
Deviation in measurement of 24.00 hours post dose vitals sign in period I		
Deviation in housing criteria of at least 10.50 hours pre-dose in period I[a]		
Clinical laboratory investigations were to be done at in-house clinical laboratory, however; due to instrument break down (b) (4) samples were outsourced at (b) (4) for biochemical investigation.		

[a] As these deviations have occurred prior to any treatment being administered, their categorization with respect to the test or reference products cannot be done.

Comments on Dropouts/Adverse Events/Protocol Deviations:

- There was one (1) dropout throughout the study. Subject No. (b) (6) withdrew from the study after 5.50 hours blood sampling time in Period II due to adverse events (mild headache and moderate loose motion). The dropout was in accordance with the firm's protocol (Study Code: ARL/10/408, Version 03).

- All adverse events were mild in intensity, except the loose motion in Subject No. (b) (6) is in moderate intensity. The most common clinical adverse event caused by administration of test product or reference product is mild headache or dizziness, with the incidence of 8.62% and 1.72%, respectively. These adverse events are consistent with what has been reported in RLD[9], where drowsiness, dizziness, and fatigue can occur with therapeutic dosage and is believed to be drug-related.

- There were one hundred and fourteen (114) blood sampling deviations during the fasting BE study. As per the protocol, post-dose blood sample collection was to be done within 2 minutes of the scheduled time. Time point deviations were due to cannula blockage or poor blood flow or during ambulatory samples. Most time deviations for non-ambulatory samples are minor (within 10 minutes). Thus are considered to be insignificant by the reviewer. Ambulatory samples were collected in

[9] http://www.clinicalpharmacology-ip.com/Forms/Monograph/monograph.aspx?cpnum=179&sec=monadve&t=0

72.00 and 96.00 hours, thus the time deviations are in the elimination phase and won't impact the study outcome. The firm used actual sampling times for its pharmacokinetic (PK) calculations. Those time deviations should not change the bioequivalence study outcome.

- There were six (6) protocol deviations in measurement of 24.00 hours post-dose vitals sign in Period I. Per protocol, vital signs were to be measured within ± 30 minutes of scheduled time. However, for few subjects in Period I, 24:00 hrs vitals were recorded 10-20 minutes before scheduled time. These protocol deviations should not impact the bioequivalence study outcome.

- There were ten (10) protocol deviations in housing criteria. Per the protocol, all subjects were to be checked in the study at least 10.50 hours pre-dose. However, Subject Nos. (b) (6) (10 subjects) in Period I did not follow this criteria due to late availability of the pathology report. Since all these subjects were in the center and their restrictions, inclusion and exclusion criteria were well maintained, these deviations won't impact the bioequivalence study outcome.

- There was one (1) protocol deviation in the location of clinical laboratory investigation. Per protocol, clinical laboratory investigations were to be done at in-house clinical laboratory. However, due to instrument break down, samples were outsourced at (b) (4) for biochemical investigation. This protocol deviation should not impact the bioequivalence study outcome.

- The overall protocol deviations did not compromise the integrity of the study.

- The firm's handling of dropouts/adverse events/protocol deviations are acceptable.

- The clinical results are acceptable.

Are the concentrations of standard curve and QC samples relevant to the concentration of the samples?	Yes
Are there any concerns related to sample analysis (including reanalysis, run rejection, etc.)?	No

Were 20% of chromatograms included?*	Yes, Subject Nos. (b) (6)
Did the firm provide 100% numerical raw data (e.g. peak height, peak area, response count of IS and analyte) in run sequence order (i.e. Run log) in the instrument printout format?	**No**, the firm only submitted 20% of raw numerical data along with chromatograms.

*Subject No. (b) (6) was withdrawn from the study.

Table 12. SOP's Dealing with Sample Analysis

SOP No.	Effective Date of SOP	SOP Title
(b) (4)		STANDARD OPERATING PROCEDURE FOR REPEAT SAMPLE ANALYSIS

Comments:

1. There was one rejected batch (Run ID: 22/01/11 ARL_10_408_SUB_07) for dextromethorphan and dextrorphan (simultaneous detection) due to autosampler error. Entire batch resubmitted as ARL_10_408_SUB_07_R after injecting system suitability. The rejection is in line with SOP (b) (4) (Standard Operating Procedure for Batch Acceptance of Subject Sample Analysis; effective date (b) (4)).

2. The firm used 228 (7.2% of total 3187 sample analyzed) samples in its incurred sample reproducibility (ISR) testing for dextromethorphan and dextrorphan. ISR testing was performed as per SOP (b) (4) (Standard operating procedure incurred sample reanalysis, effective date (b) (4) The SOP acceptance criteria were set as at least 67% of the ISR samples should be within ±20% in terms of difference between repeat and initial values when compared with mean of initial and repeat values. A total of 226 out of 228 (99.1%) were found to be within ± 20% difference. Therefore, ISR for dextromethorphan and dextrorphan was found to be within acceptance criteria. The analytical methods are reproducible.

3. The firm only submitted 20% of raw numerical data along with chromatograms. The firm will be asked to provide complete (100%) raw numerical data including original and repeated analysis for all samples.

4. The firm's fasting study assay is **incomplete**.

4.1.1.4 Pharmacokinetic Results

Please note that the information below is obtained based on the assumption that the firm's repeated assays are acceptable. The PK parameters may change upon the DBIII receives additional information and re-evaluates the firm's repeated assays.

Firm Calculated

Is there a Tmax difference between T and R	No, T/R ratio: 1 (5.5 hrs vs. 5.5 hrs)
Are any CIs marginal?	No
Were the subjects dosed in groups?	No
Is the study design replicate and/or reference-scaled?	No
Is sampling time adequate?	Yes

Overall Comment:

- The firm excluded Subjects No. (b) (6) from statistical analysis for dextromethorphan due to pre-dose concentrations exceed more than 5% of Cmax. These subjects were kept in the statistical analysis for dextrorphan. The data exclusion and inclusion were in accordance with the firm's protocol (Study Code: ARL/10/408, Version 03).

- Based on the firm's calculation, the 90% confidence intervals (CIs) for the least squares geometric means of LnAUCt, LnAUCi and LnCmax of parent drug dextromethorphan meet the BE criteria of 80.00- 125.00%.

- However, the firm did not submit concentration and pharmacokinetic data of dextromethorphan in SAS transport files (.xpt) for fasting study subjects. Instead, the firm provided concentration and pharmacokinetic data of dextromethorphan in SAS transport files (.xpt) for fed study in duplicated. Therefore, the firm will be asked to submit dextromethorphan concentration and pharmacokinetic data for the fasting study in SAS transport format. .

- The PK parameters of the test and reference for the active metabolite dextrorphan were comparable. Therefore the metabolite data are supportive. The 90% CI for the least squares geometric mean of LnCmax for dextrorphan is 115.26-125.11%, which slightly falls out of the BE acceptance range of 80.00 - 125.00%. However, per draft product specific BE guidance of dextromethorphan polistirex[10], BE evaluation was made based on the data of the parent compound (dextromethorphan).

- However, the firm's *in vivo* BE study under fasted conditions is still **inadequate** due to the deficiencies specified in Section 3.7.

Table 17. Study Information

Study Number	ARL/10/409
Study Title	A randomized, open label, balanced, two-treatment, two-period, two-sequence, single dose, crossover, bioequivalence study of Dextromethorphan Polistirex Extended-Release Suspension 30mg/5mL manufactured by Amneal Pharmaceuticals, USA with Delsym® (Dextromethorphan Polistirex Extended-Release Suspension) 30mg/5mL distributed by Reckitt Benckiser Inc., Parsippany, NJ 07054-0224, in normal, healthy, adult, male and female human subjects under fed conditions
Clinical Site (Name & Address)	Accutest Research Laboratories (I) Pvt. Ltd., A-31, M.I.D.C., T.T.C., Industrial Area, Khairane, Navi Mumbai-400 709, INDIA.
Principal Investigator	Dr. Suhas Khandave M.D. (Pharmacology)
Dosing Dates	Period I: 19/February/11 Period II: 28/February/11
Analytical Site (Name & Address)	(b) (4)
Analysis Dates	03/17/11 - 04/18/11
Analytical Director	(b) (4)
Storage Period of Biostudy Samples (no. of days from the first day of sample collection to the last day of sample analysis)	58 days

Table 18. Product Information

Product	**Test**	**Reference**
Treatment ID	**A**	**B**
Product Name	Dextromethorphan Polistirex ER Suspension	Delsym® (dextromethorphan polistirex) Extended Release Suspension
Manufacturer	Amneal Pharmaceuticals, USA.	Reckitt Benckiser Inc., Parsippany, NJ 07054-0224
Batch/Lot No.	BB-ST-10012B	54554
Manufacture Date	12/01/10	
Expiration Date		03/2013
Strength	EQ 30 mg HBr/5 mL	EQ 30 mg HBr/5 mL
Dosage Form	Suspension	Suspension
Bio-Batch Size	(b) (4)	

Production Batch Size	(b) (4)	
Potency (Assay)	100.9%	99.2%
Content Uniformity (mean)	Top: 100.3% Middle: 100.3% Bottom: 100.2%	
Dose Administered	10 mL	10 mL
Route of Administration	Oral	Oral

Was the drug product administered per labeling?	Yes

Washout Period	9 days
Randomization Scheme (Sequence of T and R)	**Yes** **TR:** 1, 3, 5, 8, 9, 12, 14, 16, 18, 19, 21, 23, 26, 27, 29, 31, 33, 36, 38, 39, 41, 43, 45, 48, 50, 51, 54, 56 and 58 **RT:** 2, 4, 6, 7, 10, 11, 13, 15, 17, 20, 22, 24, 25, 28, 30, 32, 34, 35, 37, 40, 42, 44, 46, 47, 49, 52, 53, 55 and 57
Blood Sampling Times	Pre-dose (collect within 1 hour prior to dosing), 1.00, 1.50, 2.00, 2.25, 2.50, 2.75, 3.00, 3.50, 4.00, 4.50, 5.00, 5.50, 6.00, 7.00, 8.00, 9.00, 10.00, 11.00, 12.00, 14.00, 17.00, 24.00, 30.00, 36.00, 48.00, 72.00, and 96.00 hours post-dose (72.00 and 96.00 hours samples were collected on ambulatory basis)
Blood Sample Processing & Storage (include storage temperature)	Blood samples were collected in sodium heparin vacutainer at desired sampling time point. Intravenous indwelling cannula was kept patent by injecting 0.2 mL of heparinized saline solution except for each ambulatory sample. Blood samples were collected after discarding the first 0.2 mL of heparinized blood from i.v. cannula. Centrifugation of the samples was done within 30 minutes after the last blood sample collection of respective time point. Blood samples were centrifuged at 5°C, at 3500 RPM for 10 minutes under refrigeration. Plasma was separated and placed in suitable labeled vials in two aliquots, one as analytical sample and the other as control sample. All the plasma samples were stored below -50°C until the analysis of the samples.

Standard FDA Meal Used?	No. The details of the calories from fat, carbohydrate and protein for each individual component were provided. The test meal meets the high fat and high calorie recommendation.

Components of Non-standard FDA Meal Used in Fed Bioequivalence Study

Food-item	Amount	Ingredients	CHO (g)	Protein (g)	Fat (g)	Energy (calories)
HIGH FAT, HIGH CALORIE BREAKFAST						
01) Bread	2 small slices	Bread toast, (~35-40g)	15.0	3.0	0.5	80
		Butter, 10g	0.0	0.0	8.0	72
02) Paneer Bhurji	~ 150g	Paneer, 100g	7.9	13.4	23	292

LUNCH						

Comments on Study Design:

1. A total of 58 healthy adult subjects were enrolled in this study. 54 subjects completed the study. Data from 53 subjects were used in the dextromethorphan statistical analysis. Subject No. (b) (6) withdrew from the study due to non-compliance to fed condition in Period I (vomiting prior to dosing of Period I). Subject Nos. (b) (6) were withdrawn from the study due to adverse events (. Subject No. (b) (6) withdrew from the study due to onset of menses before dosing in Period I. Subjects No. (b) (6) was excluded from dextromethorphan statistical analysis r due to pre-dose concentration exceed more than 5% of Cmax. However, this subject was included in statistical analysis for dextrorphan. Therefore, the subjects included in the statistical analysis for dextromethorphan and dextrorphan are (b) (6) and (b) (6) respectively.

2. Sodium heparin is used as anticoagulant in sample collection, which is consistent with pre-validated bioanalytical method.

3. Guidance for Industry, Food-Effect Bioavailability and Fed Bioequivalence Studies (December 2002) states that "*A high-fat (approximately 50 percent of total caloric content of the meal) and high-calorie (approximately 800 to 1000 calories) meal is recommended as a test meal for food-effect BA and fed BE studies. This test meal should derive approximately 150, 250, and 500-600 calories from protein, carbohydrate, and fat, respectively*". The firm used vegetarian meals for their fed BE studies, maintaining a high-fat and high calorie meal.

4. There is no adequate data from which to conclude that vegetarian meals in bioequivalence studies will have the same effect on drug absorption as meals using meat as the main protein source. Therefore, the Division of Bioequivalence III does not encourage the use of vegetarian meals for fed bioequivalence studies.[11] The firm will be informed of the Agency's current recommendations as it pertains to fed meals.

5. The study design is **acceptable**.

[11] Control review of 71-559 (V:\FIRMSAM\COBALT\Controls\071559C1207.doc)

4.1.2.2 Clinical Results

	Range		
Other Factors		Nil	Nil

Reviewer's Comment:

1. The demographic profile is listed for dextromethorphan. Subjects No. (b) (6) was excluded from dextromethorphan statistical analysis due to pre-dose concentration exceed more than 5% of Cmax. However, this subject was included in statistical analysis for dextrorphan.

2. The firm did not give detailed BMI mean and range, but noted "*On protocol basis subjects were enrolled according to Life Insurance Corporation Chart*". The reviewer checked the fed study protocol (Study Code: ARL/10/409, Version: 03, Date: November 15, 2010), the firm used "*body weight within ± 15% of ideal weight as related to height and body frame according to Life Insurance Corporation (LIC) Chart"* (attached in Section 4.1.1.2) as the study inclusion criteria. The reviewer

justifies that the study subjects' body weight distributes in the normal weight range (BMI: 18.5 – 25) and won't impact the outcome of the study.

Table 21. Dropout Information, Fed Bioequivalence Study

Subject No.	Reason	Period	Replaced?
(b) (6)	Subject was withdrawn due to non-compliance to fed condition	I	NA
	Subject was withdrawn due to adverse event after 72.00 hours post dose blood sample collection	I	NA
	Subject was withdrawn due to onset of menses in Period I before dosing	I	NA
	Subject was withdrawn due to adverse event after 09.00 hours post dose blood sample collection	II	NA

Table 22. Study Adverse Events, Fed Bioequivalence Study

Body System / Adverse Event	Reported Incidence by Treatment Groups	
	Study No. ARL/10/409	
	Test	Reference
Body as a whole		
Headache	01 (01.82%)	01 (01.79%)
Giddiness	01 (01.82%)	00 (00.00%)
Swelling over left cheek and periorbital region	00 (00.00%)	01 (01.79 %)
Fever	01 (01.82 %)	00 (00.00%)
Gastrointestinal		
Emesis	00 (00.00%)	01 (01.79 %)
Blood and Lymphatic system		
High eosinophil count[a]	00 (00.00%)	00 (00.00%)
High WBC count[a]	00 (00.00%)	00 (00.00%)
Urinary Tract Infection		
Abnormal urine analysis [a]	00 (00.00%)	00 (00.00%)
Total	**03 (05.45 %)**	**03 (05.36 %)**

[a] The laboratory parameter was normal during screening, but was found to be abnormal in the post-study evaluation. As the subject had received both the treatments, it is difficult to attribute this adverse event to either of the treatments.

Subjects Experiencing Emesis

Subject Number*	Test/Reference	Period	Time Post-Dose	Duration Between Dosing and Emesis (hrs)
(b) (6)	Reference	I	9.00	9.4 hours

Was the adverse event profile observed during the fasting bioequivalence study comparable for the test and reference product? Please comment.

Comparable. There is no strong evidence suggesting that the test drug caused substantially more serious adverse events comparing to the reference drug.

Are there any serious adverse events or death? If so, are they reported to the OGD Safety Committee?

No serious adverse events (SAEs) were reported during the fed BE study.

Are there any other safety concerns based on the adverse event profile?

No

Table 23. Protocol Deviations, Fed Bioequivalence Study

Type	Subject #s (Test)	Subject #s (Ref.)
Deviation in scheduled time in blood sample collection	(b) (6)	
Deviation in use of opened unused bottle of test and the reference investigational products for dispensing and dosing	--	--
Deviation in reporting of adverse event to IEC and sponsor within 14 calendar days	--	--
Deviation in measurement of 24.00 hours post dose vitals sign in Period II	(b) (6)	
Deviation in assigning the subject number serially as per the reporting time for the enrollment of Period I of the study[a]		

[a]As these deviations have occurred prior to any treatment being administered, their categorization with respect to the test or reference products cannot be done.

Comments on Dropouts/Adverse Events/Protocol Deviations:

- There were four (4) dropouts throughout the study. Subject No. (b) (6) withdrew from the study due to non-compliance to fed condition in Period I (vomi g prior to dosing of Period I). Subject No. (b) (6) was withdrawn from the study due to adverse event (moderate swelling over left cheek and periorbital region) after 72.00 hours post-dose blood sample collection in period I. Subject No. (b) (6) withdrew from the study due to onset of menses before dosing in period I. Subject No. (b) (6) was withdrawn from the study due to adverse event (moderate fever) after 9.00 hours post-dose blood sample collection in Period II. Those dropouts were in accordance with the firm's protocol (Study Code: ARL/10/409, Version 03).

- Subject No. (b) (6) experienced two mild adverse events including headache and emesis when received reference treatment in Period I, and experienced one moderate adverse event when received test treatment in Period II. The episode of vomiting for Subject No. (b) (6) with reference treatment is **within** 2 x the median of Tmax of dextr ethorphan (5.5 hrs). Subject No. (b) (6) was withdrawn from the study in Period II due to fever in moderate severity.

- All adverse events were mild in intensity, except the swelling over left cheek and periorbital region in Subject No. (b) (6) and fever in Subject No. (b) (6) were in moderate intensity. These adverse events are consistent with what has been reported in RLD[12], where drowsiness, dizziness, vomiting, rash, and fatigue have been reported.

- There were one hundred and eight (108) blood sampling deviations during the fed BE study. As per the protocol, post-dose blood sample collection was to be done within 2 minutes of the scheduled time. Time point deviations were due to cannula blockage or poor blood flow or during ambulatory samples. Most time deviations for non-ambulatory samples are minor (within 11 minutes). Thus are considered to be insignificant by the reviewer. Ambulatory samples were collected in 72.00 and 96.00 hours, thus the time deviations are in the elimination phase and won't impact the study outcome. The firm used actual sampling times for its pharmacokinetic (PK) calculations. Those time deviations should not change the bioequivalence study outcome.

- There were two (2) protocol deviations in measurement of 24.00 hours post-dose vitals sign in Period II. Per protocol, vital signs were to be measured within ± 30 minutes of scheduled time. However, 24.00 hours post dose vitals sign in Period II was erroneously taken 01 minute before the scheduled time of Subject No. (b) (6) minutes after the scheduled time of Subject No. (b) (6) These protocol deviations should not impact the bioequivalence study outcome.

- There were two (2) protocol deviations in assigning the subject number for the enrollment of Period I of the study. Per the protocol, all the volunteers were to be assigned serially the subject number as per their reporting time for the enrollment of Period I of the study. However check in for subject nos. (b) (6) (b) (6) was done after enrollment of subject no. (b) (6) as previously enrolled subject nos. (b) (6) (b) (6) went home due to personal reasons and hence were replaced with subject nos. (b) (6). This deviation should not impact the bioequivalence study outcome.

- There was one (1) protocol deviation in use of opened unused bottle of test and the reference investigational products for dispensing and dosing. Per protocol, the test and the reference investigational products (suspension) from opened unused bottle

[12] http://www.clinicalpharmacology-ip.com/Forms/Monograph/monograph.aspx?cpnum=179&sec=monadve&t=0

were to be destroyed at the end of the study period. However, in order to have sufficient quantity for retention purpose, this opened unused bottle was used for dispensing and dosing during subsequent study period. This protocol deviation should not impact the bioequivalence study outcome.

- There was one (1) protocol deviation in reporting of adverse event to IEC and sponsor. Per protocol, all adverse event and serious adverse event whether drug related or not were to be reported to the sponsor and IEC by the investigator within 14 calendar days. However, erroneously the reporting of adverse event to IEC and sponsor was delayed by 03 days. This protocol deviation should not impact the bioequivalence study outcome.

- There were four missing samples in the fed study. Missing sample values were labeled “MSV” in firm provided SAS transport dataset. These missing samples are in 72.00 hours or 96.00 hours ambulatory sampling time and are missing due to subjects not reported.

- The overall protocol deviations did not compromise the integrity of the study.

- The firm’s handling of dropouts/adverse events/protocol deviations are acceptable.

- The clinical results are **acceptable**.

Are the concentrations of standard curve and QC samples relevant to the concentration of the samples?	Yes
Are there any concerns related to sample reanalysis or run rejection?	No

Were 20% of chromatograms included?	Yes, Subject Nos. (b) (6) (b) (6)
Did the firm provide numerical raw data (e.g. peak height, peak area, response count of IS and analyte) in run sequence order (i.e. Run log) in the instrument printout format?	**No**, the firm only submitted 20% of raw numerical data along with chromatograms.

Table 25. SOP's Dealing with Sample Analysis

SOP No.	Effective Date of SOP	SOP Title
(b) (4)		STANDARD OPERATING PROCEDURE FOR REPEAT SAMPLE ANALYSIS

Comments:

1. There was one rejected batch run (Run ID: SUB_29) for dextromethorphan and dextrorphan (simultaneous detection) due to interference in CS0 at analyte retention time & MRM more than 20% of LLOQ area. The rejection is in line with SOP # (b) (4) (Standard Operating Procedure for Batch Acceptance of Subject Sample Analysis; effective date (b) (4), which states "*in blank matrix, response of the interfering peaks, if any, at the retention time and MRM of analyte(s) and internal standard should be ≤ 20% of the extracted CS-1 (LLOQ) response for analyte(s) and ≤ 5% of the extracted mean internal standard response, respectively*". However, the firm did not provide raw numerical data to support its batch rejection. The firm will be asked to provide this information.

2. The firm used 208 (6.9 % of total 3020 sample analyzed) samples in its incurred sample reproducibility (ISR) testing for dextromethorphan and dextrorphan. ISR testing was performed as per SOP (b) (4) (Standard operating procedure incurred sample reanalysis (ISRA), effective date (b) (4)). The SOP acceptance criteria were set as at least 67% of the ISR samples should be within ±20% in terms of difference between repeat and initial values when compared with mean of initial and repeat values. A total of 208 out of 208 (100%) were found to be

within ±20% difference. Therefore, ISR for dextromethorphan and dextrorphan was found to be within acceptance criteria. The analytical methods are reproducible.

3. The firm only submitted 20% of raw numerical data along with chromatograms. The firm will be asked to provide complete (100%) raw numerical data including original and repeated analysis for all samples.

4. The firm's fed study assay is **incomplete** per the above comments.

4.1.2.4 Pharmacokinetic Results

Please note that the information below is obtained based on the assumption that the firm's repeated assays are acceptable. The PK parameters may change upon the DBIII receives additional information and re-evaluates the firm's repeated assays.

Is there a Tmax difference between T and R	No , T/R ratio: 1 (5.5 hr vs. 5.5 hrs)
Are any CIs marginal?	No
Were the subjects dosed in groups?	No
Is the study design replicate and/or reference-scaled?	No
Is sampling time adequate?	Yes

Overall Comment:

- The firm excluded Subjects No. (b) (6) from dextromethorphan statistical analysis due to pre-dose concentrations exceed m re than 5% of Cmax. This subject was included in the statistical analysis for dextrorphan. The data exclusion and inclusion were in accordance with the firm's protocol (Study Code: ARL/10/409, Version 03).

- Per the RLD labeling, no food effect is specified for Delsym® (Dextromethorphan Polistirex Extended Release Suspension), EQ 30MG HBR/5ML. In the current application, the Cmax concentration of dextromethorphan was increased by 20.8% and 29.4% for test and reference products, respectively. The AUCt of dextromethorphan was increased by 39.3% and 44.3% for test and reference products, respectively. The Cmax concentration of dextrorphan was increased by 25.8% and 45.0% for test and reference products, respectively. The AUCt of dextrorphan was increased by 40.8% and 54.7% for test and reference products, respectively.

- Based on the firm's calculation, the 90% CIs for the least squares geometric means of LnAUCt, LnAUCi and LnCmax of dextromethorphan meet the BE criteria of 80.00-125.00%.

- The PK parameters of the test and reference for the active metabolite dextrorphan were comparable. Therefore the metabolite data are supportive.

- However, the firm's *in vivo* BE study under fed conditions is still **inadequate** due to the deficiencies specified in Section 3.7.

[13] DARRTS ANDA 203133, 0001(2) 08/25/2011 ORIG-1/Quality/Response to Information Request, ORIG-1/Quality/Quality Information, Module 1.2 Cover Letters

Are the amounts of all inactive ingredients based on Maximum Daily Dose (MDD) within IIG (per unit) limits?	No, the firm has conducted a number of toxicity studies to justify the amounts of sodium polystyrene sulfonate used in the test formulation.
If no, are they all above/within IIG (per day) limits?	No, Please see comments
Are all color additives and elemental iron within limits specified by CFR (if applicable) or less than 0.1% of the total unit weight (w/w)?	N/A.
Are all strengths of the test product proportionally similar per the BA/BE guidance criteria?	N/A

Comments:

1. Per RLD labeling, the maximum daily dose (MDD) for Dextromethorphan Polistirex ER Suspension, EQ 30 mg HBr/5 mL for adults, elderly and adolescents (age ≥12 years) is 120 mg/day [14].

2. The RLD formulation is listed as below:

[14] http://www.accessdata.fda.gov/drugsatfda_docs/label/2012/021449s020lbl.pdf

4.3 Office of Study Integrity and Surveillance (OSIS) Inspection

(b) (4)

Summary OSI Inspection History for the Clinical and Analytical Sites:

1. NDA 205040 (Clinical Site): The OSI inspection was requested in 10/10/2013[32]. The clinical study was conducted between 07/13/2011 – 07/24/2011[33], which is within ± 3.5 years from the study dates of the current ANDA. The OSI inspection outcome for the clinical site was VAI (Voluntary Action Indicated).

   OSI finding #1: An investigation was not conducted in accordance with the signed statement of investigator and investigational plan. Specifically, your Clinical Investigator is responsible for ensuring that an investigation is conducted per signed Form FDA-1572 and the study protocol. However, review of records of the Study Protocols ARL/11/227 and ARL/11/228 revealed the following deviations:

   A) Your Clinical Investigator failed to delegate the responsibilities in writing for ensuring that all associates and employees assisting in these investigations are informed about their obligation in meeting the above commitments. Instead, he signed one document dated 07/11/11 and 07/11/11 for documenting his discussion with a Sub/Co-Investigator regarding the details of Study Protocols ARL/11/227 and ARL/11/228, respectively.

   B) Your Clinical Investigator did not review or countersign any documents of the study subjects which include informed consent forms (ICF), Screening, including their blood tests/ECG reports required for their enrollment in the study, randomization and drug dosing, other case report forms (CRF), protocol deviation, adverse event reports and post study blood tests. Instead, he countersigned a coversheet each of all CRFs dated 08/01/11 and 08/02/11 of the aforesaid of Study Protocols ARL/11/227 and ARL/11/228, respectively.

   OSI evaluation: The clinical investigator should have delegated authorities to Sub/Co-Investigator and associates in writing for their responsibilities for studies ARL/11/227 and ARL/11/228. Also, the investigator himself should have reviewed

[32] DARRTS NDA 205040 ARAOJO, DAVID E, 10/10/2013 N/A 10/10/2013 FRM-CONSULT-09 (Biopharmaceutical Inspections Request)
[33] NDA 205040 reference BE studies submitted (b) (4)
(b) (4)

informed consent forms (ICF), screening, drug dosing, protocol deviation, adverse event reports and post study blood tests. However, the observation may not have impact on results of the clinical studies. This review cannot ascertain whether human subject safety was affected. The clinical data from studies ARL/11/227 and ARL/11/228 are acceptable for review.

Reviewer's Comments for OSI Finding #1: In current application, the clinical investigator has countersigned the documents of the study subjects such as informed consent forms (ICF), randomization and drug dosing, other case report forms (CRF), protocol deviation, and adverse event reports. Therefore, the reviewer has determined that that the above OSI finding #1 **does not have an** impact on the current ANDA.

Justification not to issue ECD/IR for ANDA 203133

From: Chen, Alicia Sent: Mon 2/23/2015 9:47 AM
To: Ren, Ke; Wang, Yun (OGD/DB3)
Cc:
Subject: FW: ECD/IR for ANDA 203133

Hello Ke and Yun,

The RPM replied that her recommendation is to hold off on our ECD/IR and to issue a CR. This is because Chemistry has major deficiencies and labeling has deficiencies as well. Please let me know what you think and what you'd like to do, and I will reply back to the RPM with our decision.

Thanks!,
Alicia

[34] DARRTS NDA 205425 ZEBALLOS, MONICA I, 07/24/2013 N/A 07/24/2013 FRM-CONSULT-09 (Biopharmaceutical Inspections Request)

BIOEQUIVALENCE DEFICIENCIES TO BE PROVIDED TO THE APPLICANT

ANDA: 203133

APPLICANT: Amneal Pharmaceuticals

DRUG PRODUCT: Dextromethorphan Polistirex Extended Release Suspension, EQ 30 mg HBr/5 mL

The Division of Bioequivalence III (DBIII) has completed its review and has identified the following deficiencies:

Deficiencies Related to the Bioequivalence (BE) Studies

1. You did not submit **ALL** analytical raw numerical data. Please provide complete (100%) raw numerical data, in the instrument printout format, including original and repeated analysis for all samples, including the data of peak area/height for the analyte, peak area/height for the internal standard, ratio of the peak area/height for the analyte to the peak area/height for the internal standard, dilution factor (if any), and the corresponding concentration for each assayed and reassayed sample of all samples, calibration standard concentration samples, and quality control samples for your fasting (#ARL/10/408) and fed (#ARL/10/409) BE studies.

2. You did not submit concentration and pharmacokinetic data of dextromethorphan in SAS transport files (.xpt) for fasting (#ARL/10/408) study subjects. Instead, you provided concentration and pharmacokinetic data of dextromethorphan in SAS transport files (.xpt) for fed (#ARL/10/409) study in duplicated. Therefore, please submit dextromethorphan concentration and pharmacokinetic data for the fasting study in SAS transport format.

Deficiency Related to the Formulation

3. (b) (4)

For Future Submissions

4. You used a non-standard high-fat vegetarian breakfast in the fed BE study (#ARL/10/409). Currently, there is no adequate data from which to conclude that a high-fat vegetarian breakfast served prior to dosing in BE studies under a fed state will have the same effect on drug absorption as the standard FDA high-fat breakfast

using meat as the main protein source. Therefore, the DBIII does not encourage the use of vegetarian meals for breakfast in future fed BE study.

The bioequivalence comments provided in this communication are comprehensive as of issuance. However, these comments are subject to revision if additional concerns raised by chemistry, manufacturing and controls, microbiology, labeling, other scientific or regulatory issues or inspectional results arise in the future. Please be advised that these concerns may result in the need for additional bioequivalence information and/or studies, or may result in a conclusion that the proposed formulation is not approvable.

Sincerely yours,

{See appended electronic signature page}

REVIEW OF A DISSOLUTION AMENDMENT

I. EXECUTIVE SUMMARY

This is a bioequivalence (BE) amendment (01/04/2013) for Amneal's Dextromethorphan Polistirex Extended Release Oral Suspension, 30 mg/5 mL. In this amendment the firm acknowledged its acceptance of the FDA recommended dissolution method and specifications (communicated on 05/16/2012), as follows:

Dissolution Medium:	500 mL of 0.1N HCl at 37ºC + 0.5ºC for 1 hour followed with addition of 400 mL of phosphate buffer (final pH 6.8) containing 0.25 M Sodium chloride after 1 hr sampling.
USP Apparatus:	II (Paddle)
RPM:	50
Temperature:	37°C± 0.5°C
Specifications	Acid Stage: 1 hr (b) (4) Buffer Stage: 30 min: (b) (4); 60 min: (b) (4); 360 min (6 hrs) NLT (b) (4)

Note: Individual dissolution data are provided in the Attachment section.

Brief Background:
The original dissolution review [DARRTS ANDA 203133 REV-BIOEQ-02(Dissolution Review), 02/27/2012] was found incomplete. The submitted dissolution results indicated that the FDA-recommended method [500 mL of 0.1 N HCl, paddle at 50 rpm] is not appropriate for this drug due to slow release (b) (4) at 180 minutes. In addition, the firm only collected samples up to 180 minutes. The dissolution testing was found incomplete.

On 04/24/2012, the firm submitted amendment providing additional dissolution testing as requested by the Division of Bioequivalence I (DB I). Based on the comparative dissolution data obtained in different dissolution media [DARRTS ANDA 203133 REV-BIOEQ-02(Dissolution Review), 05/08/2012], the DB I recommended the above dissolution method and specifications as the most appropriate and discriminating method for the test product. The firm was asked to acknowledge the following dissolution method and specifications.

On 06/14/2012 and 08/08/2012, the firm submitted two amendments [DARRTS ANDA 203133 REV-BIOEQ-02(Dissolution Review), 07/20/2012 and 09/12/2012]. In these amendments, the firm accepted the FDA recommended dissolution method; however, the firm proposed different specifications (see below):

The firm's proposed specifications		
	Time Points	% Dissolution
Acid Stage	1 hour	(b) (4)
Buffer Stage	30 minutes	
	60 minutes	
	360 minutes (6 hrs)	

To justify its request of change, the firm provided the results of dissolution data from three lots two of which were stored lots for 17 and 18 months [DARRTS ANDA 203133 REV-BIOEQ-02(Dissolution Review), 07/20/2012]. The DB did not accept the dissolution specifications on the basis of the dissolution testing data on the stored lots. Therefore, in the latest DBI letter to the firm, dated 09/12/2012, for supporting the firm's newly proposed specifications, the DBI requested that the firm submit dissolution data using 12 units of the newly manufactured test lot, comparing it with 12 units of an unexpired lot of the reference listed drug product. In addition, the firm was asked to provide documents to show that the new lot is manufactured, controlled and tested under the same conditions as the test biolot used in the original bioequivalence studies.

In the current amendment responding to the DBI's 09/12/2012 letter, instead of providing the data requested, the firm acknowledged its acceptance of the original FDA recommended dissolution method and specifications. The dissolution portion of this ANDA is now adequate. The BE will review the fasted and fed BE studies at a later date.

II. TABLE OF CONTENTS

III. BACKGROUND ON THE DISSOLUTION SECTION OF THIS APPLICATION:

See the original dissolution review [DARRTS ANDA 203133 REV-BIOEQ-02(Dissolution Review), 02/27/2012, and 05/08/2012].

IV. RESPONSES TO DEFICIENCY COMMENTS:

Deficiency comments are as stated in the DB dissolution review of the original submission [DARRTS ANDA 203133 REV-BIOEQ-02(Dissolution Review), 09/12/2012].

DB's Deficiency Comment

Your submitted dissolution data for a newly manufactured test lot, for only 6 units, to support your proposed change in the FDA-recommended specifications for your drug product, Dextromethorphan Polistirex Extended-Release Suspension, 30 mg/5 mL, are incomplete. Please submit dissolution data for 12 units of the newly manufactured test lot, comparing it with 12 units of an unexpired lot of the reference listed drug product.

Please be informed of the following:

(1) In the submission of your dissolution study amendment, please include a statement confirming that the new lot was manufactured, controlled and tested under the same conditions as the biobatch (Lot #BB-ST-10012B) used in the original bioequivalence studies, in terms of i) formulation, ii) manufacturing process, iii) in-process controls, iv) specifications, v) site, vi) equipment, etc.

(2) Please inform the Division of Chemistry (DC), Office of Generic Drugs, of the manufacturing of the new batch of the test product, and submit to the Division of Chemistry the complete Chemistry Manufacturing and Controls (CMC) data and documentation of the new test lot for evaluation by the DC.

(3) Please submit to the DBI the Certificates of Analysis (COA) for the new test lot and the unexpired reference lot used in the additional request dissolution testing. Please clearly indicate the dissolution testing date.

Firm's Response to the Deficiency Comment

After evaluating the dissolution data of all the batches (R&D Batches and ANDA submission batch), Amneal acknowledges the agency's recommended dissolution method and specifications recommended in the bioequivalence deficiency letter dated May 16, 2012 (see blow).

Dissolution Medium:	500 mL of 0.1N HCl at 37 °C ± 0.5 °C for 1 hour followed with addition of 400 mL of phosphate buffer (final pH 6.8) containing 0.25 M Sodium chloride after 1 hr sampling.
USP Apparatus:	II (Paddle)
RPM :	50
Temperature:	37 º C ± 0.5 º C
Specifications	Acid Stage: 1 hr (b) (4) Buffer Stage: 30 min: (b) (4) 60 min: (b) (4) 360 min (6 hrs) NLT (b) (4)

Accordingly, Amneal has revised the drug product specifications and analytical method to include the FDA recommended specifications and dissolution testing parameters. Please refer Module 3.2.P.5.1 for the revised drug product specifications and Module 3.2.P.5.2 for the revised dissolution test method. The revised dissolution test method was validated as per ICH guidance in the actual lab conditions and the validation report is provided in Module 3.2.P.5.3 of this amendment.

DB's Comment on the Firm's Response to the Deficiency Comment

The firm's response is acceptable. The firm acknowledged its acceptance of the following FDA-recommended dissolution method and specifications:

Dissolution Medium:	500 mL of 0.1N HCl at 37ºC ± 0.5ºC for 1 hour followed with addition of 400 mL of phosphate buffer (final pH 6.8) containing 0.25 M Sodium chloride after 1hr sampling.
USP Apparatus:	II (Paddle)
RPM:	50
Temperature:	37°C± 0.5°C
Specifications	Acid Stage: 1 hr (b) (4) Buffer Stage: 30 min: (b) (4) 60 min: (b) (4); 360 min (6 hrs) NLT (b) (4)

IV. DEFICIENCY COMMENTS:

None

V. RECOMMENDATIONS:

The in vitro dissolution testing conducted by Amneal Pharmaceuticals on its Dextromethorphan Polistirex Extended Release Oral Suspension, 30 mg/5 mL, is acceptable. The DB I acknowledges that the firm will performed the following recommended dissolution method and specifications.

Dissolution Medium:	500 mL of 0.1N HCl at 37ºC ± 0.5ºC for 1 hour followed with addition of 400 mL of phosphate buffer (final pH 6.8) containing 0.25 M Sodium chloride after 1hr sampling.
USP Apparatus:	II (Paddle)
RPM:	50
Temperature:	37°C± 0.5°C
Specifications	Acid Stage: 1 hr (b) (4) Buffer Stage: 30 min: (b) (4); 60 min: (b) (4) 360 min (6 hrs) NLT (b) (4)

VI. ATTACHMENTS:

REVIEW OF A DISSOLUTION AMENDMENT

I. EXECUTIVE SUMMARY

In the previous dissolution amendment [DARRTS 203133, REV-BIOEQ-02(Dissolution Review), 07/20/2012], the firm submitted acceptable dissolution data according to the FDA-recommended dissolution method (table, provided below). Based on the submitted dissolution data [DARRTS 203133, REV-BIOEQ-02(Dissolution Review), 05/08/2012], the Division of Bioequivalence (DB) has recommended the following specifications:

The FDA recommended dissolution method and specifications	
Dissolution Medium:	500 mL of 0.1N HCl at 37ºC ± 0.5ºC for 1 hour followed with addition of 400 mL of phosphate buffer (final pH 6.8) containing 0.25 M Sodium chloride after 1hr sampling.
USP Apparatus:	II (Paddle)
RPM:	50
Temperature:	37°C± 0.5°C
Specifications	**Acid Stage:** 1 hr (b) (4) **Buffer Stage:** 30 min: (b) (4) 60 min: 360 min (6 hrs) NLT (b) (4)

In this amendment (08/08/2012), the firm accepted the FDA recommended dissolution method; however, the firm proposed the following different specifications:

The firm's proposed specifications		
	Time Points	**% Dissolution**
Acid Stage	1 hour	(b) (4)
Buffer Stage	30 minutes	
	60 minutes	
	360 minutes (6 hrs)	

To justify its proposed specifications, the firm compared dissolution data obtained from a fresh lot (6 units) to the bio-lot (12 units) stored for 17 months, details are provided below (section III of this review).

From the DBI point of view, the firm's response to the above deficiency (letter dated: 05/15/2012) is still incomplete. The firm is requested to submit dissolution data using 12 units of the newly manufactured test lot, comparing it with 12 units of an unexpired lot of the reference listed drug product. In addition, the firm should provide documents to show that the new lot is manufactured, controlled and tested under the same conditions as the test biolot used in the original bioequivalence studies.

The dissolution part of this application is incomplete pending firm's response to the deficiency cited above.

The DBI will review the fasted and fed BE studies at a later date.

II. TABLE OF CONTENTS

III. BACKGROUND ON THE DISSOLUTION SECTION OF THIS APPLICATION:

See the original dissolution review [DARRTS ANDA 203133 REV-BIOEQ-02(Dissolution Review), 02/27/2012, 05/08/2012 and 07/20/2012].

IV. RESPONSES TO DEFICIENCY COMMENTS:

Deficiency comments are as stated in the DB dissolution review of the original submission [DARRTS ANDA 203133 REV-BIOEQ-02(Dissolution Review), 07/20/2012].

DB's Deficiency Comment

Your proposal to change the FDA-recommended specifications for your test product, Dextromethorphan Polistirex Extended-Release Suspension, 30 mg/5 mL, is not acceptable based on unacceptable supportive data. (b) (4) The DB observed that the results showed the opposite direction of change. By comparing the dissolution results of the biostudy test lot # BB-ST-10012B (manufactured in December 2010), provided in the original submission, with the dissolution results of the same lot at 17 months old, the data indicated that the dissolution mean value (b) (4) at the 6-hour time point.

The dissolution specifications are generally established based on the dissolution data on 12 units of the fresh biostudy test lot (not stored lot) that has been shown bioequivalent in bioequivalence studies. Therefore, the dissolution testing data on the stored lots, as submitted by you in the current amendment, are not acceptable for supporting your proposed change in specifications. The dissolution data for batch # BB-ST-10012B manufactured in December 2010, and for the Process Engineering (PE) Batch # BB-PE-10-012 manufactured in November 2010 were obtained when they were at least 17 and 18 month old, respectively.

You may submit additional dissolution data of at least three ***fresh*** production lots to support your proposed revision of the dissolution specifications.

Alternatively, please acknowledge your acceptance of the following FDA-recommended dissolution method and specifications:

Dissolution Medium:	500 mL of 0.1N HCl at 37ºC ± 0.5ºC for 1 hour followed with addition of 400 mL of phosphate buffer (final pH 6.8) containing 0.25 M Sodium chloride after 1hr sampling.
USP Apparatus:	II (Paddle)
RPM:	50
Temperature:	37°C± 0.5°C
Specifications	Acid Stage: 1 hr (b) (4) Buffer Stage: 30 min: (b) (4) 60 min: (b) (4) 360 min (6 hrs) NLT (b) (4)

Firm's Response to the Deficiency Comment

Based on the communication between Teresa Ramson, Regulatory Manager, OGD, DBE and Srinivas Kone from Analytical R&D of Amneal Pharmaceuticals on August 07, 2012, Amneal hereby submits this Amendment. This Amendment is in reference to the Amneal's reply (ANDA # 203133; Sequence # 0007 dated on June 14, 2012) of Amneal's proposal to slightly change the FDA recommended specifications for our drug product, Dextromethorphan Polistirex Extended Release Suspension, eq. to 30 mg/5 mL of Dextromethorphan Hydrobromide. In the Bioequivalence Deficiency Letter dated 07/25/2012, the Division of Bioequivalence stated that the (b) (4) Further, it is mentioned in the deficiency letter that the DB observed that the results showed the opposite direction of change. By comparing the dissolution results of the bio study test lot # BB-ST-10012B (manufactured in December 2010), provided in the original submission, with the dissolution results of the same lot at l7 months old, the data indicated that the dissolution mean value (b) (4) at the 6-hour time point.

In view of the above observation made by the Division of Bioequivalence, Amneal would like to clarify to the agency that the dissolution results of the bio study test lot # BB-ST-10012B (manufactured in December 2010) provided in the original submission ((b) (4) at 6 hours) was as per our in-house dissolution test method where as the dissolution results of the same lot BB-ST-10012B (17 months old) provided in the Bioequivalence amendment ((b) (4) at 6 hours) dated June 14, 2012 (Sequence# 0007) was as per the dissolution test method recommended by the Division of Bioequivalence in the deficiency letter dated May 16, 2012.

In order to compare the dissolution data of the 17 months old lot # BB-ST-10012B with that of the initial dissolution results; Amneal has manufactured a fresh representative R&D batch (# RD1590-176) and conducted dissolution test using the DB recommended dissolution method to obtain initial dissolution profiles. Obtained results are compared in below table. The dissolution results in the following table shows that the % dissolved in 6 hours for the freshly manufactured batch (initial) is (b) (4) as compared to the 17 months old batch, i.e. (b) (4) using DB recommended Dissolution method.

Table 1. Dissolution Summary					
Batch #	Sample # (No. of Units)	Acid stage	Buffer stage		
		1 hour	30 minutes	1 hour	6 hours
BB-ST-10012B (Mfg Date# 12/2010)	1	(b) (4)

DB's Comment on the Firm's Response to the Deficiency Comment

The dissolution testing is incomplete (for details, see the deficiency comment section, below).
Results of f_2 calculation for the above submitted dissolution data is 65.72

The firm's response to the above deficiency is incomplete.

IV. DEFICIENCY COMMENTS:

The dissolution testing is incomplete. The firm is requested to submit dissolution data using 12 units of the newly manufactured test lot, comparing it with 12 units of the unexpired lot of the reference product. Since the firm is planning to use a newly manufactured test lot for setting the dissolution specifications for its test drug product, the firm will be asked to (1) indicate to the DBI that the new lot is manufactured, controlled and tested under the same conditions as the biolot used in the original bioequivalence study, in terms of i) formulation, ii) manufacturing process, iii) in-process controls, iv) specifications, v) site, vi) equipment, etc. (2) to inform the Division of Chemistry, Office of Generic Drugs, of the manufacturing of the new batch of the test product, and submit to this review division (DBI) the complete CMC data and documentation of the new lot for evaluation by the division, and (3) to submit to the DBI the Certificates of Analysis (COA) for the new test lot.

V. RECOMMENDATIONS:

The dissolution testing conducted by Amneal Pharmaceuticals on its Dextromethorphan Polistirex Extended Release Oral Suspension, 30 mg/5 mL, is incomplete due to the deficiency cited in the deficiency section.

BIOEQUIVALENCE DEFICIENCIES

ANDA:	203133
APPLICANT:	Amneal Pharmaceuticals
DRUG PRODUCT:	Dextromethorphan Polistirex Extended-Release Suspension, 30 mg/5 mL

The Division of Bioequivalence I (DBI) has completed its review of the dissolution testing portion of your submission acknowledged on the cover sheet. The review of the bioequivalence (BE) studies will be conducted later. The following deficiency has been identified:

Your submitted dissolution data for a newly manufactured test lot, for only 6 units, to support your proposed change in the FDA-recommended specifications for your drug product, Dextromethorphan Polistirex Extended-Release Suspension, 30 mg/5 mL, are incomplete. Please submit dissolution data for 12 units of the newly manufactured test lot, comparing it with 12 units of an unexpired lot of the reference listed drug product.

Please be informed of the following:

(1) In the submission of your dissolution study amendment, please include a statement confirming that the new lot was manufactured, controlled and tested under the same conditions as the biobatch (Lot #BB-ST-10012B) used in the original bioequivalence studies, in terms of i) formulation, ii) manufacturing process, iii) in-process controls, iv) specifications, v) site, vi) equipment, etc.

(2) Please inform the Division of Chemistry (DC), Office of Generic Drugs, of the manufacturing of the new batch of the test product, and submit to the Division of Chemistry the complete Chemistry Manufacturing and Controls (CMC) data and documentation of the new test lot for evaluation by the DC.

(3) Please submit to the DBI the Certificates of Analysis (COA) for the new test lot and the unexpired reference lot used in the additional request dissolution testing. Please clearly indicate the dissolution testing date.

Sincerely yours,

{See appended electronic signature page}

Dale P. Conner, Pharm.D.
Director, Division of Bioequivalence
Office of Generic Drugs
Center for Drug Evaluation and Research

REVIEW OF A DISSOLUTION AMENDMENT

I. EXECUTIVE SUMMARY

In the previous dissolution amendment [DARRTS 203133, REV-BIOEQ-02(Dissolution Review), 05/08/2012], the firm submitted acceptable dissolution data according to the FDA-recommended dissolution method (table, provided below). Based on the submitted dissolution data (individual data provided in the Attachment section of this report), the Division of Bioequivalence (DB) has recommended the following specifications:

The FDA recommended dissolution method and specifications	
Dissolution Medium:	500 mL of 0.1N HCl at 37ºC ± 0.5ºC for 1 hour followed with addition of 400 mL of phosphate buffer (final pH 6.8) containing 0.25 M Sodium chloride after 1hr sampling.
USP Apparatus:	II (Paddle)
RPM:	50
Temperature:	37°C± 0.5°C
Specifications	**Acid Stage:** 1 hr (b) (4) **Buffer Stage:** 30 min: (b) (4) 60 min: 360 min (6 hrs) NLT (b) (4)

In this amendment (06/14/2012), the firm accepted the FDA recommended dissolution method; however, the firm proposed the following different specifications:

The firm's proposed specifications		
	Time Points	**% Dissolution**
Acid Stage	1 hour	(b) (4)
Buffer Stage	30 minutes	
	60 minutes	
	360 minutes (6 hrs)	

To justify its request of change, the firm provided the results of dissolution data from three lots which two of them are stored lots for 17 and 18 months (details in the section IV of this review).

The firm's justification is not acceptable. The DB also does not agree with the firm's statement, (b) (4) However, the fact is that the results show the opposite. By comparing the dissolution results of the biolot (No. BB-ST-10012B manufactured in December 2010) provided in the original submission vs. the same lot 17 month old, the data indicate that the dissolution mean value (b) (4) at 6 hour time point (for details see the Attachment section).

From the DB point of view, the firm's proposed dissolution specifications are not acceptable. The DB's recommended dissolution specifications are established based on the submitted dissolution data for the biolot (fresh) that has been used in bioequivalence studies. The DB does not accept the dissolution specifications on the basis of the dissolution testing data on the stored lots.

In order to justify its proposed specifications, the firm may submit additional dissolution data of ***three fresh production lots of the test product***, to determine if a revision of the dissolution specification is warranted. Alternatively, the firm is requested to acknowledge the DB recommended specifications.

Therefore, the previously communicated (05/15/2012) DB - recommended dissolution method and specifications remain unchanged as provided in the table above.

The dissolution part of this application is incomplete pending firm's acceptance of the DB recommended dissolution method and specifications.

The DB will review the fasted and fed BE studies at a later date.

II. TABLE OF CONTENTS

III. BACKGROUND ON THE DISSOLUTION SECTION OF THIS APPLICATION:

See the original dissolution review [DARRTS ANDA 203133 REV-BIOEQ-02(Dissolution Review), 02/27/2012, and 05/08/2012].

IV. RESPONSES TO DEFICIENCY COMMENTS:

Deficiency comments are as stated in the DB dissolution review of the original submission [DARRTS ANDA 203133 REV-BIOEQ-02(Dissolution Review), 05/08/2012].

DB's Deficiency Comment

Your dissolution testing is acceptable. Based on the submitted dissolution data, the DB recommends the dissolution method and specifications below. Please acknowledge the following FDA-recommended dissolution method and specifications.

Dissolution Medium:	500 mL of 0.1N HCl at 37ºC ± 0.5ºC for 1 hour followed with addition of 400 mL of phosphate buffer (final pH 6.8) containing 0.25 M Sodium chloride after 1hr sampling.
USP Apparatus:	II (Paddle)
RPM:	50
Temperature:	37°C± 0.5°C
Specifications	Acid Stage: 1 hr (b) (4) Buffer Stage: 30 min: (b) (4) 60 min: (b) (4) 360 min (6 hrs) NLT (b) (4)

Firm's Response to the Deficiency Comment

Based on the Agency's recommendation on specifications for dissolution of Dextromethorphan Polistirex Extended-Release oral Suspension Equivalent to 30 mg/5 mL of Dextromethorphan Hydrobromide, Amneal has performed dissolution testing on the ANDA submission batch (Batch # BB-ST-10012B) manufactured in December 2010, the Process Engineering (PE) Batch (Batch # BB-PE-10-012) manufactured in November 2010 and on the freshly prepared representative R&D Batch (Batch # RD1590-176) manufactured in May 2012 to verify the compliance with the FDA recommended dissolution specifications.
The observed dissolution testing results are summarized in below table:

Table 1. Dissolution Summary					
Batch #	Sample # (No. of Units)	Acid stage	Buffer stage		
		1 hour	30 minutes	1 hour	6 hours
BB-ST-10012B (Mfg Date# 12/2010)	1	[redacted] (b) (4)			
	2				
	3				
	4				
	5				
	6				
	7				
	8				
	9				
	10				
	11				
	12				
BB-PE-10-012 (Mfg Date# 11/2010)	1				
	2				
	3				
	4				
	5				
	6				
RD1590-176 (Mfg Date# 05/2012)	1				
	2				
	3				
	4				
	5				
	6				
Min (%)					
Max (%)					
Mean (%)		25	54	63	84
% RSD		10.7	7.6	6.7	4.5

It is apparent from the dissolution data that the release profiles of ANDA submission batch and PE batch (**18 Month old**) are comparable to the freshly prepared R&D batch. [redacted] (b) (4) . Therefore, the initial release of the batch at 6 hour becomes critical where % dissolved is at or just below [redacted] (b) (4) Therefore, based on these results, it is our assessment that the specification for this Extended Release suspension at 6 hour should be NLT [redacted] (b) (4) instead of NLT [redacted] (b) (4) However, this change in the specification does not alter the quality of the drug product from a release perspective and allows some space for batch to batch uniformity.

For the reason stated above, Amneal would like to have following specification for % dissolved at each time point with slight modifications from the Agency's recommended method and seeking for the Agency's acceptance.

Amneal Proposed Dissolution Specifications:

	Time Points	% Dissolution
Acid Stage	1 hour	(b) (4)
Buffer Stage	30 minutes	
	60 minutes	
	360 minutes (6 hrs)	

DB's Comment on the Firm's Response to the Deficiency Comment

The firm's justification is not acceptable. The DB does not agree with the firm's statement, (b) (4) . However, the fact is that the results show the opposite. By comparing the dissolution results of the biolot (# BB-ST-10012B manufactured in December 2010), provided in the original submission vs. the same lot 17 month old, the data indicate that the dissolution mean value (b) (4) at 6 hour time point (for details see the Attachment section).

Therefore, the firm's proposal to change the DB's recommended specifications for its test product Dextromethorphan Polistirex Extended-Release Suspension, 30 mg/5 mL is not acceptable. As per the DB practice, the dissolution specifications are established based on the dissolution data on **12 units** of the biolot (fresh, not stored) that has been used in bioequivalence studies. The DB does not accept the dissolution specifications on the basis of the dissolution testing data on stored lots. Therefore, the DB does not agree with the firm's proposed revision of the dissolution specifications.

The firm may submit dissolution data of at least three fresh (not stored) production lots, to determine if a revision of the dissolution specifications is warranted. It should be pointed out that the dissolution data submitted in this amendment [batch # BB-ST-10012B manufactured in December 2010, and the Process Engineering (PE) Batch # BB-PE-10-012 manufactured in November 2010] are based on stored lots (17 and 18 month old, respectively).

Alternatively, the firm is requested to acknowledge its acceptance of the following FDA-recommended dissolution method and specifications:

Dissolution Medium:	500 mL of 0.1N HCl at 37ºC ± 0.5ºC for 1 hour followed with addition of 400 mL of phosphate buffer (final pH 6.8) containing 0.25 M Sodium chloride after 1hr sampling.
USP Apparatus:	II (Paddle)
RPM:	50
Temperature:	37°C± 0.5°C
Specifications	Acid Stage: 1 hr (b) (4) Buffer Stage: 30 min: (b) (4); 60 min (b) (4) 360 min (6 hrs) NLT (b) (4)

IV. DEFICIENCY COMMENTS:

The dissolution testing is incomplete. The firm may submit dissolution data of at least three fresh (not stored) production lots, to determine if a revision of the dissolution specifications is warranted.
Alternatively, the firm is requested to acknowledge its acceptance of the following FDA-recommended dissolution method and specifications:

Dissolution Medium:	500 mL of 0.1N HCl at 37ºC ± 0.5ºC for 1 hour followed with addition of 400 mL of phosphate buffer (final pH 6.8) containing 0.25 M Sodium chloride after 1hr sampling.
USP Apparatus:	II (Paddle)
RPM:	50
Temperature:	37°C± 0.5°C
Specifications	Acid Stage: 1 hr (b) (4) Buffer Stage: 30 min: (b) (4) 60 min: (b) (4) 360 min (6 hrs) NLT (b) (4)

V. RECOMMENDATIONS:

The dissolution testing conducted by Amneal Pharmaceuticals on its Dextromethorphan Polistirex Extended Release Oral Suspension, 30 mg/5 mL, is incomplete due to the deficiency cited in the deficiency section.

VI. ATTACHMENTS:

Results of Dissolution Method
(Note: This method is recommended by DB)

BIOEQUIVALENCE DEFICIENCIES

ANDA:	203133
APPLICANT:	Amneal Pharmaceuticals
DRUG PRODUCT:	Dextromethorphan Polistirex Extended-Release Suspension, 30 mg/5 mL

The Division of Bioequivalence (DB) has completed its review of the dissolution testing portion of your submission acknowledged on the cover sheet. The review of the bioequivalence (BE) studies will be conducted later. The following deficiency has been identified:

Your proposal to change the FDA-recommended specifications for your test product, Dextromethorphan Polistirex Extended-Release Suspension, 30 mg/5 mL, is not acceptable based on unacceptable supportive data. The DB does not agree with your statement that (b) (4) The DB observed that the results showed the opposite direction of change. By comparing the dissolution results of the biostudy test lot # BB-ST-10012B (manufactured in December 2010), provided in the original submission, with the dissolution results of the same lot at 17 months old, the data indicated that the dissolution mean value (b) (4) at the 6-hour time point.

The dissolution specifications are generally established based on the dissolution data on **12 units** of the fresh biostudy test lot (not stored lot) that has been shown bioequivalent in bioequivalence studies. Therefore, the dissolution testing data on the stored lots, as submitted by you in the current amendment, are not acceptable for supporting your proposed change in specifications. The dissolution data for batch # BB-ST-10012B manufactured in December 2010, and for the Process Engineering (PE) Batch # BB-PE-10-012 manufactured in November 2010 were obtained when they were at least 17 and 18 month old, respectively.

You may submit additional dissolution data of at least three ***fresh*** production lots to support your proposed revision of the dissolution specifications.

Alternatively, please acknowledge your acceptance of the following FDA-recommended dissolution method and specifications:

Dissolution Medium:	500 mL of 0.1N HCl at 37°C ± 0.5°C for 1 hour followed with addition of 400 mL of phosphate buffer (final pH 6.8) containing 0.25 M Sodium chloride after 1hr sampling.
USP Apparatus:	II (Paddle)

REVIEW OF A DISSOLUTION AMENDMENT

I. EXECUTIVE SUMMARY

The original dissolution review [DARRTS ANDA 203133 REV-BIOEQ-02(Dissolution Review), 02/27/2012] was found incomplete. The submitted dissolution results indicated that the FDA-recommended method [500 mL of 0.1 N HCl, paddle at 50 rpm] is not appropriate for this drug due to slow release (b) (4) at 180 minutes. In addition, the firm only collected samples up to 180 minutes.

In this amendment, the firm provided additional dissolution testing as requested by Division of Bioequivalence I (DB I). Based on the comparative dissolution data obtained in different dissolution media (data are provided in the Attachment section), DB I recommends the following dissolution method and specifications as the most appropriate and discriminating method for the test product, Dextromethorphan Polistirex Extended Release Oral Suspension, 30 mg/5 mL.

Dissolution Medium:	500 mL of 0.1N HCl at 37ºC + 0.5ºC for 1 hour followed with addition of 400 mL of phosphate buffer (final pH 6.8) containing 0.25 M Sodium chloride after 1 hr sampling.
USP Apparatus:	II (Paddle)
RPM:	50
Temperature:	37°C± 0.5°C
Specifications	Acid Stage: 1 hr (b) (4) Buffer Stage: 30 min: (b) (4); 60 min: (b) (4); 360 min (6 hrs) NLT (b) (4)

The firm should acknowledge the above mentioned dissolution method and specifications.

The DB I will review the fasted and fed BE studies at a later date.

II. TABLE OF CONTENTS

III. BACKGROUND ON THE DISSOLUTION SECTION OF THIS APPLICATION:

See the original dissolution review [DARRTS ANDA 203133 REV-BIOEQ-02(Dissolution Review), 02/27/2012].

IV. RESPONSES TO DEFICIENCY COMMENTS:

Deficiency comments are as stated in the DBE dissolution review of the original submission [DARRTS ANDA 203133 REV-BIOEQ-02(Dissolution Review), 02/27/2012].

Deficiency Comment #1

You have conducted dissolution testing using the dissolution method recommended in the FDA dissolution method website, as well as your proposed dissolution method. The dissolution was shown to be incomplete at the last sampling time point of 3 hours, based on the FDA-recommended method (with a mean of (b) (4) *and* (b) (4) *for the test and reference product, respectively). On the other hand, the dissolution relatively quickly reached a mean of* (b) (4) *for the test product at 4 hours, based on your proposed method which uses* (b) (4) (b) (4) *In order to fully and properly evaluate all available methods, and determine the most appropriate method and specifications for your test product, we recommend that you conduct additional dissolution testing using the following method which uses no surfactant: The testing should be done in 500 mL of 0.1N HCl at 37ºC + 0.5ºC for 1 hour, followed with addition of 400 mL of phosphate buffer (final pH 6.8), at 37ºC + 0.5ºC, after 1 hr sampling, using USP apparatus II (Paddle) at 50 rpm. The recommended sampling times are 30, 60, 90, and 180 minutes and until at least* (b) (4) *of the labeled amount of the drug is dissolved.*

Firm's Response to the Deficiency Comment #1

As recommended by the agency in the Bioequivalence deficiency letter dated March 07, 2012, Amneal has performed dissolution testing on RLD and Amneal' product in following dissolution medium and conditions without surfactant:

Dissolution Medium:	500 mL of 0.1N HCl for 1 hour followed with addition of 400 mL of phosphate buffer (final pH 6.8) after 1 hr sampling.
USP Apparatus:	II (Paddle)
RPM:	50
Temperature:	37°C± 0.5°C

Time Point:	1 Hour (Acid Stage) 30, 60, 90 and 180 minutes and until at least (b) (4) of the labeled amount of the drug is dissolved.

From the dissolution results, about (b) (4) of drug release at 6 hours with a stagnant value from 6 hours to 24 hours was observed for RLD. Similarly for Amneal's product, about (b) (4) release obtained at 6 hours with a stagnant value up to 24 hours is observed. The drug did not released beyond (b) (4) till 24 hours time point. The individual dosage unit data as well as the mean, range (min and max) and RSD of 12 units of Amneal's drug product and RLD are summarized in following tables.

Dissolution Parameters:

Dissolution Medium: **500 mL of 0.1N HCl at 37°C ± 0.5°C for 1 hour, followed with addition of 400 mL of phosphate buffer (final pH 6.8)**

Apparatus: USP Apparatus II

RPM: 50

Temperature: 37°C ± 0.5°C

Time Points: 1 hour in acid followed by 30 minutes, 1, 1.5, 3, 6, 9, 12, 18 and 24 hours in buffer

Since the Dextromethorphan Polistirex Extended Release oral Suspension is pertaining to a resin complex, a possible cause of these results could be less availability of cations in order to exchange the drug for release. Hence, Amneal had contacted the Division of Bioequivalence on March 23, 2012 to discuss these results and recommended to allow the addition of cations (NaCl) in the dissolution medium to obtain the desired drug release.

Based on the communication between DB I (Teresa Ramson, Regulatory Manager, OGD, DBI) and Amneal Pharmaceuticals (Srinivas Kone from Analytical R&D) on March 28, 2012, Amneal has performed additional dissolution testing to evaluate the effect of Sodium chloride at different concentration levels (b) (4) 0.25M) on the release of drug from the drug product. ***Details of the results are provided in the Attachment section of this review (below).***

The following table summarizes the results:

Table 17. Comparative dissolution results with different NaCl concentration

Graphical presentation to evaluate the effect of NaCl

(b) (4)

Firm's comments on the dissolution results:
The comparative dissolution results indicated that the release of Dextromethorphan Hydrobromide increases with the increase in the Sodium Chloride concentration. The optimum level of Sodium chloride is 0.25 M.

Based on the dissolution data, it seems that the dissolution testing performed with 500 mL 0.1N HCl (Acid Stage) followed by addition of 400 mL Phosphate buffer (pH 6.8) containing 0.25 M Sodium chloride gives best suitable results.

DB's Comment on Deficiency Comment #1:

Based on the comparison dissolution data in different dissolution media, DB I recommends the following dissolution method and specifications (see below) as the most appropriate and discriminating method for the test product, Dextromethorphan Polistirex Extended Release Oral Suspension, 30 mg/5 mL. The recommended method is the same as that used in the Experiment III shown below.

Dissolution Medium:	500 mL of 0.1N HCl at 37ºC + 0.5ºC for 1 hour followed with addition of 400 mL of phosphate buffer (final pH 6.8) containing 0.25 M Sodium chloride after 1 hr sampling.
USP Apparatus:	II (Paddle)
RPM:	50
Temperature:	37°C± 0.5°C
Specifications	Acid Stage: 1 hr (b) (4) Buffer Stage: 30 min: (b) (4); 60 min: (b) (4); 360 NLT (b) (4)

V. DEFICIENCY COMMENTS:

The dissolution testing is incomplete. Based on the submitted dissolution data, the firm should acknowledge the following FDA-recommended dissolution method and specifications.

Dissolution Medium:	500 mL of 0.1N HCl at 37ºC + 0.5ºC for 1 hour followed with addition of 400 mL of phosphate buffer (final pH 6.8) containing 0.25 M Sodium chloride after 1 hr sampling.
USP Apparatus:	II (Paddle)
RPM:	50
Temperature:	37°C± 0.5°C
Specifications	Acid Stage: 1 hr (b) (4) Buffer Stage: 30 min: (b) (4); 60 min: (b) (4) 360 NLT (b) (4)

VI. RECOMMENDATIONS:

The dissolution testing conducted by Amneal Pharmaceuticals on its Dextromethorphan Polistirex Extended Release Oral Suspension, 30 mg/5 mL, is incomplete due to the deficiency cited in the deficiency section.

VII. ATTACHMENTS:

Dissolution using Phosphate Buffer 6.8 with addition of Sodium Chloride

Since the Dextromethorphan Hydrobromide Extended Release Suspension pertains a resin complex, a possible cause of these results could be less availability of cations in order to exchange the drug for release.

Therefore, Amneal contacted the Division of Bioequivalence to discuss about the results. Based on the controlled correspondence with Division of Bioequivalence, Amneal added different molality of Sodium Chloride in the phosphate buffer pH 6.8 to establish the proper concentration of Sodium Chloride as Sodium Chloride adds more cations irrespective of any pH change.

Based on these following dissolution media were evaluated

1. (b) (4)
2.
3. 500 mL of 0.1N HCl for 1 hour and followed by addition of 400mL of phosphate buffer to pH 6.8 containing 0.25 M NaCl

Experiment III
(Note: This method is recommended by DB I)

Dissolution Medium: 500 mL of 0.1N HCl at 37°C ± 0.5°C for 1 hour, followed with addition of 400 mL of phosphate buffer (final pH 6.8) with **0.25 M NaCl**

Apparatus: USP Apparatus II

RPM: 50

Temperature: 37°C ± 0.5°C

Time Points: 1 hour in acid followed by 30 minutes, 1, 1.5, 3, 6, 9, 12, 18 and 24 hours in buffer

BIOEQUIVALENCE DEFICIENCIES

ANDA:	203133
APPLICANT:	Amneal Pharmaceuticals
DRUG PRODUCT:	Dextromethorphan Polistirex Extended-Release Suspension, 30 mg/5 mL

The Division of Bioequivalence I (DBI) has completed its review of the dissolution portion of the submission acknowledged on the cover sheet. The review of the bioequivalence studies will be conducted later. The following deficiency has been identified:

Your dissolution testing is acceptable. Based on the submitted dissolution data, the DBI recommends the dissolution method and specifications below. Please acknowledge the following FDA-recommended dissolution method and specifications.

Dissolution Medium:	500 mL of 0.1N HCl at 37°C ± 0.5°C for 1 hour followed with addition of 400 mL of phosphate buffer (final pH 6.8) containing 0.25 M Sodium chloride after 1hr sampling.
USP Apparatus:	II (Paddle)

I. EXECUTIVE SUMMARY

This is a review of the dissolution testing data only.

There is no USP method for this product but there is an FDA-recommended method. The firm conducted the dissolution testing using the FDA-recommended method as well as three other media (all media used 500 mL buffer, paddle, 50 rpm) as follows:

1. 0.1N Hydrochloric Acid (**FDA-recommended method**)
2. (b) (4)
3.
4.

The submitted dissolution results indicate that the FDA-recommended method [500 mL of 0.1 N HCl, paddle at 50 rpm] is not appropriate for this drug due to slow release (b) (4) at 180 minutes. In addition, the firm only collected samples up to 180 minutes. The other three methods show relatively fast release by the first hour ((b) (4) release).

Based on the submitted dissolution data and consultation with DB I dissolution focal point (see the Attachments section for details), the firm is requested to conduct additional dissolution testing in 500 mL of 0.1N HCl at 37ºC $\pm$ 0.5ºC, with addition of 400 mL of Phosphate Buffer (final pH 6.8), at 37ºC $\pm$ 0.5ºC, after 1 hr sampling, using USP apparatus II (Paddle) at 50 rpm. The recommended sampling times are 30, 60, 90, and 180 minutes or until at least (b) (4) of the labeled amount of the drug is dissolved.

The submitted dissolution testing is incomplete.

The DB I will review the fasted and fed BE studies at a later date.

Are the dissolution data pooled?	No
Is the Dissolution SOP provided in Module 3?	Yes
Is the Assay SOP submitted?	Yes
Is the Validation Report for the Assay Method submitted?	Yes

II. COMMENTS:

1. There is no USP method for this product but there is an FDA-recommended method. The firm conducted the dissolution testing using the FDA-recommended method as well as three other media (all media used 500 mL buffer, paddle, 50 rpm) as follows:

   i. 0.1N Hydrochloric Acid (**FDA-recommended method**)
   ii. (b) (4)
   iii.
   vi.

   The submitted dissolution results indicate that the FDA recommended method [500 mL of 0.1N HCl, paddle at 50 rpm] is not appropriate for this drug due to slow release (b) (4) at 180 minutes. In addition, the firm only collected samples up to 180 minutes. The other three methods show relatively fast release by the first hour (b) (4) Therefore, the submitted dissolution testing is incomplete.

   Based on the submitted dissolution data and consultation with DB I dissolution focal point (see the Attachments section for details), the firm is requested to conduct additional dissolution testing in 500 mL of 0.1N HCl at 37ºC ± 0.5ºC, with addition of 400 mL of Phosphate Buffer (final pH 6.8), at 37ºC ± 0.5ºC, after 1 hr sampling, using USP apparatus II (Paddle) at 50 rpm. The recommended sampling times are 30, 60, 90, and 180 minutes or until at least (b) (4) of the labeled amount of the drug is dissolved.

2. The DB I will review the fasting and fed BE studies at a later date.

III. DEFICIENCY COMMENTS:

1. The firm's submitted dissolution testing is incomplete. The firm is requested to conduct additional dissolution testing in 500 mL of 0.1N HCl at 37ºC ± 0.5ºC, with addition of 400 mL of Phosphate Buffer (final pH 6.8), at 37ºC ± 0.5ºC, after 1 hr sampling, using USP apparatus II (Paddle) at 50 rpm. The recommended sampling times are 30, 60, 90, and 180 minutes or until at least (b) (4) of the labeled amount of the drug is dissolved.

IV. RECOMMENDATIONS:

The dissolution testing conducted by Amneal Pharmaceuticals on its Dextromethorphan Polistirex Extended Release Oral Suspension, 30 mg/5 mL is incomplete due to the deficiency cited in the deficiency section.

V. ATTACHMENTS:

To: Wahba, Zakaria Z
Subject: RE: A request for dissolution consult - ANDA 203133 (Dextromethorphan Polistirex ER Suspension, 30 mg/5 mL)

Hi Zak:

Here are my thoughts on your question:

1. The FDA-recommended method (i.e. the NDA method) does not dissolve to completion, and as such, probably is not the best dissolution method for release specification for generic versions of this product. Please note that the specifications for the NDA are (b) (4) at 0.5 hours; (b) (4) at 1 hour; and (b) (4) in 3 hours; and at 24 hours, only approximately (b) (4) is dissolved [see in DARRTS for NDA #018658 11/08/2004 REV-CLINPHARM-01(General Review)]. According to Guidance for Industry: Extended Release Oral Dosage Forms - Development, Evaluation, and Application of In Vitro / In Vivo Correlations: *the last time point should be the time point where at least 80% of the drug has dissolved. If the maximum amount dissolved is less than 80%, the last time point should be the time when the plateau of the dissolution profile has been reached.* Based on the submitted data for ANDA #203133, the dissolution has NOT reached plateau at 3 hours (180 minutes). According to data on NDA, dissolution hasn't really reached a clear plateau even at 24 hours [see in DARRTS for NDA #018658 11/08/2004 REV-CLINPHARM-01(General Review)]. Based on these observations, I think the FDA-method is not appropriate for this product.

2. As you pointed out, the firm's proposed method (b) (4) is less discriminatory than the method used in ANDA # 091135 [500 mL of 0.1 N HCl at 37°C ± 0.5°C, with addition of 400 mL of Phosphate Buffer **(final pH = 6.8)**, at 37°C ± 0.5°C, after 1 hr sampling, using USP apparatus II (Paddle) at 50 rpm]. In addition, the firm's proposed method uses (b) (4) and is a method which uses a single buffer media for dissolution method.

3. In my opinion, I would recommend the firm conduct comparative dissolution testing using the method from ANDA #091135 [500 mL of 0.1 N HCl at 37°C ± 0.5°C, with addition of 400 mL of Phosphate Buffer **(final pH = 6.8)**, at 37°C ± 0.5°C, after 1 hr sampling, using USP apparatus II (Paddle) at 50 rpm].

4. After the firm submits the new dissolution testing results, then a decision on the most appropriate dissolution method (i.e. their proposed method or the method recommended from ANDA #091135) and specifications for this product can be made.

If you have any further questions, please let me know. Please remember that this is just my opinion, and consult with your TL for further input.

Thanks,

Wayne

From: Wahba, Zakaria Z

To: Munshi, Utpal; Dehaven, Wayne
Cc: Wahba, Zakaria Z
Subject: A request for dissolution consult - ANDA 203133 (Dextromethorphan Polistirex ER Suspension, 30 mg/5 mL)

Hi Wayne and Utpal,
The firm conducted its dissolution testing in 4 different media (all 500 mL, paddle, 50 rpm) as follows:

1. 0.1 N Hydrochloric Acid **(FDA-recommended method)**
2. (b) (4)
3.
4.

The submitted results indicate that the FDA recommended method (method 1) is not appropriate for this drug (slow release: (b) (4) in 180 min). In addition, the firm only collected its samples up to 180 min. The other three methods show relatively fast release by the first hour ((b) (4) release).

In house data (DARRTS) for ANDA 09135: The initial dissolution reviewer for ANDA 091135 considered the dissolution testing was inadequate. In the full review of ANDA 09135 [DARRTS ANDA 091135 REV-BIOEQ-01(General Review), 07/28/2011, reviewer: W. DeHaven, Ph.D.], the dissolution was accepted and the following comment was communicated to the firm:

The DBE acknowledges that you will continue to conduct dissolution testing in 500 mL of 0.1 N HCl at 37ºC + 0.5ºC, with addition of 400 mL of Phosphate Buffer, at 37ºC + 0.5ºC, after 1 hr sampling, using USP apparatus II (Paddle) at 50 rpm.
The test product should meet the following specifications:
1 hr: NMT (b) (4)
3 hrs: (b) (4)
6 hrs:
12 hrs: NLT (b) (4)

Please provide me with your dissolution consult on this ANDA.
Thanks,
Zak

BIOEQUIVALENCE DEFICIENCY

ANDA:	203133
APPLICANT:	Amneal Pharmaceuticals
DRUG PRODUCT:	Dextromethorphan Polistirex Extended-Release Suspension, 30 mg/5 mL

The Division of Bioequivalence has completed its review of the dissolution portion of the submission acknowledged on the cover sheet. The review of the bioequivalence studies will be conducted later. The following deficiency has been identified:

You have conducted dissolution testing using the dissolution method recommended in the FDA dissolution method website, as well as your proposed dissolution method. The dissolution was shown to be incomplete at the last sampling time point of 3 hours, based on the FDA-recommended method (with a mean of 36% and 30% for the test and reference product, respectively). On the other hand, the dissolution relatively quickly reached a mean of (b) (4) for the test product at 4 hours based on your proposed method which uses (b) (4). In order to fully and properly evaluate all available methods, and determine the most appropriate method and specifications for your test product, we recommend that you conduct additional dissolution testing using the following method which uses no surfactant: The testing should be done in 500 mL of 0.1N HCl at 37°C ± 0.5°C for 1 hour, followed with addition of 400 mL of phosphate buffer (final pH 6.8), at 37°C ± 0.5°C, after 1 hr sampling, using USP apparatus II (Paddle) at 50 rpm. The recommended sampling times are 30, 60, 90, and 180 minutes and until at least (b) (4) of the labeled amount of the drug is dissolved.

Comparative dissolution profiles of all additional dissolution testing should include individual dosage unit data as well as the mean, range, and relative standard error (%RSD) at each time point for twelve dosage units of each lot tested. Please also provide summary tables for the dissolution testing data in eCTD table format.

Sincerely yours,

{See appended electronic signature page}

Re:	Generics Consult #2011-0554; ANDA#: 203133
Subject:	Pharmacology/Toxicology review of the (b) (4) (b) (4) USP (b) (4) in Dextromethorphan Polistyrex Extended Release Oral Suspension

---

BACKGROUND

The Office of Generics is requesting a Pharmacology/Toxicology review of (b) (4) (b) (4), an inactive ingredient listed under ANDA 203133 for Dextromethorphan Polistyrex Extended Release Oral Suspension (with an equivalent of 30 mg/5 ml of Dextromethorphan Hydrobromide (Dex HBr). This over-the-counter drug is used to temporarily relieve cough due to minor throat and bronchial irritation as may occur with the common cold or inhaled irritants and can be dosed up to 4 times daily (representing 120 mg Dex HBr/day or up to 2 mg/kg/day for an average person of 60 kg body weight). The sponsor, Amneal Pharmaceuticals, (b) (4) /including a 28-day and a 90-day oral toxicity study conducted in the rat, both of which show a favorable toxicity profile. Further justification given by the sponsor included the absence of post-marketing adverse experience for (b) (4) as well as the long history of use of (b) (4) as an active and inactive ingredient in the following products: 1) (b) (4)

INFORMATION REQUEST

AMNEAL PHARMACEUTICALS
Attention: Pavan Kumar
Director, Regulatory Affairs
50 HORSEBLOCK RD
BROOKHAVEN, NY 11719

Dear Pavan Kumar:

Please refer to your Abbreviated New Drug Application (ANDA) dated July 7, 2011, submitted pursuant to section 505(j) of the Federal Food, Drug, and Cosmetic Act (the Act) for DEXTROMETHORPHAN POLISTIREX SUSPENSION, EXTENDED RELEASE, 30MG/5ML (OTC).

We also refer to your submission dated April 24, 2017.

We are reviewing the Quality section of your submission and have the following comments and information requests. We request a prompt written response, no later than July 6, 2017, in order to continue our evaluation of your ANDA.

Drug Product Deficiencies:

If you do not submit a complete response by July 6, 2017, the review will be closed and the listed deficiencies will be incorporated in a COMPLETE RESPONSE correspondence.

Please note, submitting unsolicited information in your response to this Information Request may have an impact on your Target Action Date.

All items listed on this Information Request shall be addressed in its entirety, any partial or incomplete response will not be reviewed and the same deficiency list will be issued to you again as part of the Complete Response Letter issued by OGD. Please note that a commitment to address an item in the future is not considered satisfying the Information Request.

Send your submission through the Electronic Submission Gateway http://www.fda.gov/ForIndustry/ElectronicSubmissionsGateway/default.htm. Prominently

identify the submission with the following wording in bold capital letters at the top of the first page of the submission:

Subject: Easily Correctible Deficiency for ANDA 203133

ANDA 203133

Amneal Pharmaceuticals
85 Adams Avenue
Hauppauge, NY 11788
Attention: Alpesh Patel

Dear Sir:

Please refer to your Abbreviated New Drug Application (ANDA) submitted on July 8, 2011 under section 505(j) of the Federal Food, Drug, and Cosmetic Act for Dextromethorphan Polistirex Extended Release Oral Suspension, EQ 30 mg dextromethorphan hydrobromide (HBr)/5 mL.

The following Easily Correctable Deficiency has been identified:

In the amendment submission date July 14, 2016, you only submitted the complete (100%) raw numerical data for the fasting BE study (#ARL/10/408) and sample list report for two repeated batches for the fed BE study (#ARL/10/409), but did not submit ALL analytical raw numerical data for your fed BE study (#ARL/10/409). Please provide complete (100%) raw numerical data, in the instrument printout format, including original and repeated analysis for all samples, including the data of peak area/height for the analyte, peak area/height for the internal standard, ratio of the peak area/height for the analyte to the peak area/height for the internal standard, dilution factor (if any), and the corresponding concentration for each assayed and reassayed sample of all samples, calibration standard concentration samples, and quality control samples for your fed (#ARL/10/409) BE study.

The bioequivalence comments provided in this communication are comprehensive as of issuance. However, these comments are subject to revision if additional concerns raised by chemistry, manufacturing and controls, microbiology, labeling, other scientific or regulatory issues or inspectional results arise in the future. Please be advised that these concerns may result in the need for additional bioequivalence information and/or studies, or may result in a conclusion that the proposed formulation is not approvable.

Provide a complete response to these deficiencies by November 18, 2016. We will not process or review a partial response. Facsimile or e-mail responses will not be accepted. Prominently identify the submission with the following wording in bold capital letters at the top of the first page of the submission:

EASILY CORRECTABLE DEFICIENCY
BIOEQUIVALENCE
REFERENCE #11213491

If FDA does not receive a complete response by November 18, 2016, the review will be closed and the listed deficiencies will be incorporated in a COMPLETE RESPONSE correspondence. For more information, please refer to the guidance for industry, ANDA Submissions – Amendments and Easily Correctable Deficiencies under GDUFA, available on FDA's website.

If you have any questions, contact Linda Park, Office of Bioequivalence Project Manager at 240-402-5120.

**Please acknowledge receipt of this communication by sending an email to linda.park1@fda.hhs.gov

Sincerely,

Linda Park

Subject: TARGET ACTION DATE NOTIFICATION on ANDA 203133

ANDA 203133

NOTIFICATION -- TARGET ACTION DATE

AMNEAL PHARMACEUTICALS
85 ADAMS AVE
HAUPPAUGE, NEW YORK 11788 UNITED STATES
Attention: Alpesh Patel

Dear Sir,

Please refer to your Abbreviated New Drug Application (ANDA) submitted under section 505(j) of the Federal Food, Drug, and Cosmetic Act for Dextromethorphan Polistirex Extended-release Oral Suspension, 30 mg/5 mL (OTC).

We acknowledge your response to the Complete Response letter dated July 14, 2016.

The Office of Generic Drugs (OGD), Center for Drug Evaluation and Research, Food and Drug Administration (FDA), is notifying you of our new internal, administrative TARGET ACTION DATE for the above indicated ANDA.

The Target Action Date is the date by which FDA will strive to provide a communication on this ANDA. A TAD will be considered met if the applicant receives an Approval, Tentative Approval, Complete Response (CR) or a complete set of Informational Requests (IRs) by the action date. A complete set of IRs means that each pending discipline communicated its comments to the applicant. In that case, the TAD will be met if the last discipline communicates its IR by the action date.

We note that FDA is not required to inform applicants of Target Action Dates, but is providing Target Action Dates at this time as a courtesy to help applicants ascertain when communications may occur for their applications as we implement the Generic Drug User Fee Amendments of 2012 (GDUFA). Notification of a Target Action Date does not constitute a commitment or guarantee that we will take action on your application by the Target Action Date. Any amendments submitted after this notification will affect whether FDA will provide a communication on the application by the Target Action Date.

GDUFA establishes goal dates for the review of ANDAs submitted beginning October 1, 2014. Target Action Dates are not GDUFA goal dates.

The Target Action Date for this ANDA is December 14, 2016.

Please contact your Regulatory Project Manager, Vikas Arora at (240) 402-8884 for an additional status update of your application.

Sincerely,

Vikas Arora

FROM: Teresa Ramson FDA CONTACT PHONE: (240) 276-8782

Dear Sir:

This facsimile is in reference to the bioequivalence data submitted on July 7, 2011, pursuant to Section 505(j) of the Federal Food, Drug, and Cosmetic Act for Dextromethorphan Polistirex Extended-Release Suspension, 30 mg/5 mL.

Reference is also made to your amendment submitted on August 08, 2012.

The Division of Bioequivalence has completed its review of the submission(s) referenced above and has identified deficiencies which are presented on the attached ____ page(s). This facsimile is to be regarded as an official FDA communication and unless requested, a hard-copy will not be mailed.

You should submit a response to these deficiencies in accord with 21 CFR 314.96. Your amendment should respond to all the deficiencies listed. **Facsimiles or partial replies will not be considered for review.** Your cover letter should clearly indicate:

Bioequivalence Response to Information Request

If applicable, please clearly identify any new studies (i.e., fasting, fed, multiple dose, dissolution data, waiver or dissolution waiver) that might be included for each strength. We also request that you include a copy of this **communication with your response.**
Please submit a copy of your amendment in an archival (blue) jacket and unless submitted electronically through the gateway, a review (orange) jacket. Please direct any questions concerning this communication to the project manager identified above.

Please remember that when changes are requested to your proposed dissolution methods and/or specifications by the Division of Bioequivalence, an amendment to the Division of Chemistry should also be submitted to revise the release and stability specification. We also recommend that supportive dissolution data or scientific justification be provided in the CMC submission to demonstrate that the revised dissolution specification will be met over the shelf life of the drug product.

SPECIAL INSTRUCTIONS:

*Effective **01-Aug-2010**, the new mailing address for Abbreviated New Drug Application (ANDA) Regulatory Documents is:*

Office of Generic Drugs
Document Control Room, Metro Park North VII
7620 Standish Place
Rockville, Maryland 20855-2810

ANDAs will only be accepted at the new mailing address listed above. For further information, please refer to the following websites prior to submitting your ANDA Regulatory documents: Office of Generic Drugs (OGD): http://www.fda.gov/cder/ogd or Federal Register: http://www.gpoaccess.gov/fr/

Please submit your response in electronic format. This will improve document availability to review staff.

ANDA:	203133
APPLICANT:	Amneal Pharmaceuticals
DRUG PRODUCT:	Dextromethorphan Polistirex Extended-Release Suspension, 30 mg/5 mL

The Division of Bioequivalence I (DBI) has completed its review of the dissolution testing portion of your submission acknowledged on the cover sheet. The review of the bioequivalence (BE) studies will be conducted later. The following deficiency has been identified:

Your submitted dissolution data for a newly manufactured test lot, for only 6 units, to support your proposed change in the FDA-recommended specifications for your drug product, Dextromethorphan Polistirex Extended-Release Suspension, 30 mg/5 mL, are incomplete. Please submit dissolution data for 12 units of the newly manufactured test lot, comparing it with 12 units of an unexpired lot of the reference listed drug product.

Please be informed of the following:

(1) In the submission of your dissolution study amendment, please include a statement confirming that the new lot was manufactured, controlled and tested under the same conditions as the biobatch (Lot #BB-ST-10012B) used in the original bioequivalence studies, in terms of i) formulation, ii) manufacturing process, iii) in-process controls, iv) specifications, v) site, vi) equipment, etc.

(2) Please inform the Division of Chemistry (DC), Office of Generic Drugs, of the manufacturing of the new batch of the test product, and submit to the Division of Chemistry the complete Chemistry Manufacturing and Controls (CMC) data and documentation of the new test lot for evaluation by the DC.

(3) Please submit to the DBI the Certificates of Analysis (COA) for the new test lot and the unexpired reference lot used in the additional request dissolution testing. Please clearly indicate the dissolution testing date.

Sincerely yours,

BIOEQUIVALENCE AMENDMENT

ANDA 203133

OFFICE OF GENERIC DRUGS, CDER, FDA
Document Control Room, Metro Park North VII
7620 Standish Pl.
Rockville, MD 20855-2810

APPLICANT: Amneal Pharmaceuticals

TEL: 631-952-0214 Ext. 331

ATTN: Pavan Kumar

FAX: 631-299-3995

FROM: Teresa Ramson

FDA CONTACT PHONE: (240) 276-8782

Dear Sir:

This facsimile is in reference to the bioequivalence data submitted on July 7, 2011, pursuant to Section 505(j) of the Federal Food, Drug, and Cosmetic Act for Dextromethorphan Polistirex Extended-Release Suspension, 30 mg/5 mL.

Reference is also made to your amendment submitted on June 14, 2012.

The Division of Bioequivalence has completed its review of the submission(s) referenced above and has identified deficiencies which are presented on the attached ____ page(s). This facsimile is to be regarded as an official FDA communication and unless requested, a hard-copy will not be mailed.

You should submit a response to these deficiencies in accord with 21 CFR 314.96. Your amendment should respond to all the deficiencies listed. **Facsimiles or partial replies will not be considered for review.** Your cover letter should clearly indicate:

Bioequivalence Response to Information Request

If applicable, please clearly identify any new studies (i.e., fasting, fed, multiple dose, dissolution data, waiver or dissolution waiver) that might be included for each strength. We also request that you include a copy of this **communication with your response.**
Please submit a copy of your amendment in an archival (blue) jacket and unless submitted electronically through the gateway, a review (orange) jacket. Please direct any questions concerning this communication to the project manager identified above.

Please remember that when changes are requested to your proposed dissolution methods and/or specifications by the Division of Bioequivalence, an amendment to the Division of Chemistry should also be submitted to revise the release and stability specification. We also recommend that supportive dissolution data or scientific justification be provided in the CMC submission to demonstrate that the revised dissolution specification will be met over the shelf life of the drug product.

SPECIAL INSTRUCTIONS:

*Effective **01-Aug-2010**, the new mailing address for Abbreviated New Drug Application (ANDA) Regulatory Documents is:*

Office of Generic Drugs
Document Control Room, Metro Park North VII
7620 Standish Place
Rockville, Maryland 20855-2810

ANDAs will only be accepted at the new mailing address listed above. For further information, please refer to the following websites prior to submitting your ANDA Regulatory documents: Office of Generic Drugs (OGD): http://www.fda.gov/cder/ogd or Federal Register: http://www.gpoaccess.gov/fr/

Please submit your response in electronic format. This will improve document availability to review staff.

BIOEQUIVALENCE DEFICIENCIES

ANDA:	203133
APPLICANT:	Amneal Pharmaceuticals
DRUG PRODUCT:	Dextromethorphan Polistirex Extended-Release Suspension, 30 mg/5 mL

The Division of Bioequivalence (DB) has completed its review of the dissolution testing portion of your submission acknowledged on the cover sheet. The review of the bioequivalence (BE) studies will be conducted later. The following deficiency has been identified:

Your proposal to change the FDA-recommended specifications for your test product, Dextromethorphan Polistirex Extended-Release Suspension, 30 mg/5 mL, is not acceptable based on unacceptable supportive data. The DB does not agree with your statement that [redacted] (b) (4) The DB observed that the results showed the opposite direction of change. By comparing the dissolution results of the biostudy test lot # BB-ST-10012B (manufactured in December 2010), provided in the original submission, with the dissolution results of the same lot at 17 months old, the data indicated that the dissolution mean value decreased from 92% to 86% at the 6-hour time point.

The dissolution specifications are generally established based on the dissolution data on **12 units** of the fresh biostudy test lot (not stored lot) that has been shown bioequivalent in bioequivalence studies. Therefore, the dissolution testing data on the stored lots, as submitted by you in the current amendment, are not acceptable for supporting your proposed change in specifications. The dissolution data for batch # BB-ST-10012B manufactured in December 2010, and for the Process Engineering (PE) Batch # BB-PE-10-012 manufactured in November 2010 were obtained when they were at least 17 and 18 month old, respectively.

You may submit additional dissolution data of at least three ***fresh*** production lots to support your proposed revision of the dissolution specifications.
Alternatively, please acknowledge your acceptance of the following FDA-recommended dissolution method and specifications:

Dissolution Medium:	500 mL of 0.1N HCl at 37°C ± 0.5°C for 1 hour followed with addition of 400 mL of phosphate buffer (final pH 6.8) containing 0.25 M Sodium chloride after 1hr sampling.
USP Apparatus:	II (Paddle)
RPM:	50
Temperature:	37°C± 0.5°C
Specifications	Acid Stage: 1 hr (b) (4) Buffer Stage: 30 min: (b) (4) 60 min: (b) (4) 360 min (6 hrs) NLT (b) (4)

Sincerely yours,

{See appended electronic signature page}

Please submit your response in electronic format. This will improve document availability to review staff.

ANDA:	203133
APPLICANT:	Amneal Pharmaceuticals
DRUG PRODUCT:	Dextromethorphan Polistirex Extended-Release Suspension, 30 mg/5 mL

The Division of Bioequivalence has completed its review of the dissolution portion of the submission acknowledged on the cover sheet. The review of the bioequivalence studies will be conducted later. The following deficiency has been identified:

You have conducted dissolution testing using the dissolution method recommended in the FDA dissolution method website, as well as your proposed dissolution method. The dissolution was shown to be incomplete at the last sampling time point of 3 hours, based on the FDA-recommended method (with a mean of 36% and 30% for the test and reference product, respectively). On the other hand, the dissolution relatively quickly reached a mean of (b) (4) for the test product at 4 hours, based on your proposed method which uses (b) (4) (b) (4). In order to fully and properly evaluate all available methods, and determine the most appropriate method and specifications for your test product, we recommend that you conduct additional dissolution testing using the following method which uses no surfactant: The testing should be done in 500 mL of 0.1N HCl at 37°C ± 0.5°C for 1 hour, followed with addition of 400 mL of phosphate buffer (final pH 6.8), at 37°C ± 0.5°C, after 1 hr sampling, using USP apparatus II (Paddle) at 50 rpm. The recommended sampling times are 30, 60, 90, and 180 minutes and until at least 80% of the labeled amount of the drug is dissolved.

Comparative dissolution profiles of all additional dissolution testing should include individual dosage unit data as well as the mean, range, and relative standard error (%RSD) at each time point for twelve dosage units of each lot tested. Please also provide summary tables for the dissolution testing data in eCTD table format.

Sincerely yours,

ANDA 203133

Amneal Pharmaceuticals
Attention: Alpesh Patel
131 Chambers Brook Road
Branchburg, NJ 08876

Dear Sir:

We acknowledge the receipt of your abbreviated new drug application submitted pursuant to Section 505(j) of the Federal Food, Drug and Cosmetic Act.

Reference is also made to the telephone conversation(s) dated August 17, 2011 and August 25, 2011 and your correspondence dated August 25, 2011 and September 2, 2011.

NAME OF DRUG: Dextromethorphan Polistirex Extended-release Suspension, 30 mg/5 mL

DATE OF APPLICATION: July 7, 2011

DATE (RECEIVED) ACCEPTABLE FOR FILING: July 8, 2011

You have filed a Paragraph IV patent certification, in accordance with 21 CFR 314.94(a)(12)(i)(A)(4) and Section 505(j)(2)(A)(vii)(IV) of the Act. Please be aware that you need to comply with the notice requirements, as outlined below. In order to facilitate review of this application, we suggest that you follow the outlined procedures below:

CONTENTS OF THE NOTICE

You must cite section 505(j)(2)(B)(ii) of the Act in the notice and should include, but not be limited to, the information as described in 21 CFR 314.95(c).

SENDING THE NOTICE

In accordance with 21 CFR 314.95(a):

- Send notice by U.S. registered or certified mail with return receipt requested to each of the following:

  1) Each owner of the patent or the representative designated by the owner to receive the notice;

2) The holder of the approved application under section 505(b) of the Act for the listed drug claimed by the patent and for which the applicant is seeking approval.

3) An applicant may rely on another form of documentation only if FDA has agreed to such documentation in advance.

DOCUMENTATION OF NOTIFICATION/RECEIPT OF NOTICE

You must submit an amendment to this application with the following:

- In accordance with 21 CFR 314.95(b), provide a statement certifying that the notice has been provided to each person identified under 314.95(a) and that notice met the content requirements under 314.95(c).

- In accordance with 21 CFR 314.95(e), provide documentation of receipt of notice by providing a copy of the return receipt or a letter acknowledging receipt by each person provided the notice.

- A designation on the exterior of the envelope and above the body of the cover letter should clearly state "PATENT AMENDMENT". This amendment should be submitted to your application as soon as documentation of receipt by the patent owner and patent holder is received.

DOCUMENTATION OF LITIGATION/SETTLEMENT OUTCOME

You are requested to submit an amendment to this application that is plainly marked on the cover sheet “PATENT AMENDMENT” with the following:

- If litigation occurs within the 45-day period as provided for in section 505(j)(4)(B)(iii) of the Act, we ask that you provide a copy of the pertinent notification.

- Although 21 CFR 314.95(f) states that the FDA will presume the notice to be complete and sufficient, we ask that if you are not sued within the 45-day period, that you provide a letter immediately after the 45 day period elapses, stating that no legal action was taken by each person provided notice.

- You must submit a copy of a copy of a court order or

judgment or a settlement agreement between the parties, whichever is applicable, or a licensing agreement between you and the patent holder, or any other relevant information. We ask that this information be submitted promptly to the application.

If you have further questions you may contact Martin Shimer, Chief, Regulatory Support Branch, at (240) 276-8675.

We will correspond with you further after we have had the opportunity to review the application.

Please identify any communications concerning this application with the ANDA number shown above.

Should you have questions concerning this application, contact:

Sarah Nguyen
Project Manager

5.3.1.3 In Vitro-In-Vivo Correlation Study Reports

1. Summary Bioequivalence tables Yes
Table 11. Product Information Yes
Table 16. Composition of Meal Used in Fed Bioequivalence Study Yes; Table 26 in ANDA

5.3.1.4 Reports of Bioanalytical and Analytical Methods for Human Studies

1. Summary Bioequivalence table:

	Table 9. Reanalysis of Study Samples Yes Table 14. Summary of Standard Curve and QC Data for Bioequivalence Sample Analyses Yes Table 15. SOPs Dealing with Bioanalytical Repeats of Study Samples Yes **Case Report Forms** should be placed under the study to which they pertain, and appropriately tagged. Refer to The eCTD Backbone File Specification for Study Tagging //www.fda.gov/downloads/Drugs/DevelopmentApprovalProcess/FormsSubmissionRequirements/ElectronicSubmissions/UCM163560.pdf	
5.4	**Literature References**	
	Possible Study Types:	
Study Type	**IN-VIVO BE STUDY(IES) with PK ENDPOINTS** (i.e., fasting/fed/sprinkle) FASTING AND FED ON 30 MG/5 ML 1. Study(ies) meets BE criteria (90% CI of 80-125, C max, AUC) Select 2. EDR Email: Data Files Submitted Select 3. In-Vitro Dissolution Select	
Study Type	**IN-VIVO BE STUDY with CLINICAL ENDPOINTS** 1. Properly defined BE endpoints (eval. by Clinical Team) Select 2. Summary results meet BE criteria: 90% CI of the proportional difference in success rate between test and reference must be within (-0.20, +0.20) for a binary/dichotomous endpoint. For a continuous endpoint, the test/reference ratio of the mean result must be within (0.80,1.25) Select 3. Summary results indicate superiority of active treatments (test & reference) over vehicle/placebo ($p<0.05$) (eval. by Clinical Team) Select 4. EDR Email: Data Files Submitted Select	
Study Type	**IN-VITRO BE STUDY(IES)** (i.e., in vitro binding assays) Select 1. Study(ies) meets BE criteria (90% CI of 80-125) Select 2. EDR Email: Data Files Submitted Select 3. In-Vitro Dissolution Select	

Study Type	**NASALLY ADMINISTERED DRUG PRODUCTS** **1. <u>Solutions</u> (Q1/Q2 sameness)** Select a. In-Vitro Studies (Dose/Spray Content Uniformity, Droplet/Drug Particle Size Distrib., Spray Pattern, Plume Geometry, Priming & Repriming) Select **2. <u>Suspensions</u> (Q1/Q2 sameness):** a. In-Vivo PK Study Select 1. Study(ies) meets BE Criteria (90% CI of 80-125, C max, AUC) Select 2. EDR Email: Data Files Submitted Select b. In-Vivo BE Study with Clinical End Points Select 1. Properly defined BE endpoints (eval. by Clinical Team) Select 2. Summary results meet BE criteria (90% CI within +/- 20% of 80-125) Select 3. Summary results indicate superiority of active treatments (test & reference) over vehicle/placebo ($p<0.05$) (eval. by Clinical Team) Select 4. EDR Email: Data Files Submitted Select c. In-Vitro Studies (Dose/Spray Content Uniformity, Droplet/Drug Particle Size Distrib., Spray Pattern, Plume Geometry, Priming & Repriming) Select	
Study Type	**IN-VIVO BE STUDY(IES) with PD ENDPOINTS** (e.g., topical corticosteroid vasoconstrictor studies) 1. Pilot Study (determination of ED50) Select 2. Pivotal Study (study meets BE criteria 90%CI of 80-125) Select	
Study Type	**TRANSDERMAL DELIVERY SYSTEMS** 1. <u>In-Vivo PK Study</u> Select a. Study(ies) meet BE Criteria (90% CI of 80-125, C max, AUC) Select b. In-Vitro Dissolution Select c. EDR Email: Data Files Submitted Select 2. <u>Adhesion Study</u> Select 3. <u>Skin Irritation/Sensitization Study</u> Select	

Updated 05/16/2011

Guidance on Dextromethorphan Polistirex

This guidance represents the Food and Drug Administration's (FDA's) current thinking on this topic. It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. You can use an alternative approach if the approach satisfies the requirements of the applicable statutes and regulations. If you want to discuss an alternative approach, contact the Office of Generic Drugs.

Active ingredient: Dextromethorphan Polistirex

Form/Route: Extended Release Oral Suspension /Oral

Recommended studies: 2 studies

1. Type of study: Fasting
   Design: Single-dose, two-way crossover *in-vivo*
   Strength: 30 mg/5 mL
   Subjects: Normal healthy males and females, general population.
   Additional Comments:

---

2. Type of study: Fed
   Design: Single-dose, two-way crossover *in-vivo*
   Strength: 30 mg/5 mL
   Subjects: Normal healthy males and females, general population.
   Additional comments:

Analytes to measure (in appropriate biological fluid): Dextromethorphan and its metabolite Dextrorphan in plasma.

Bioequivalence based on (90% CI): Dextromethorphan
Please submit the metabolite data as supportive evidence of comparable therapeutic outcome. For the metabolite, the following data should be submitted: individual and mean concentrations, individual and mean pharmacokinetic parameters, and geometric means and ratios of means for AUC and Cmax.

Waiver request of in-vivo testing: Not Applicable

Dissolution test method and sampling times:
Please note that a **Dissolution Methods Database** is available to the public at the OGD website at http://www.fda.gov/cder/ogd/index.htm. Please find the dissolution information for this product at this website. A dosage unit for a suspension is the labeled strength (5 ml). A total of 12 units from 12 different bottles should be used.

In addition to the method above, for modified release products, dissolution profiles on 12 dosage units each of test and reference products generated using USP Apparatus I at 100 rpm and/or Apparatus II at 50 rpm in at least three dissolution media (pH 1.2, 4.5 and 6.8 buffer) should be submitted in the application. Agitation speeds may have to be increased if appropriate. It is acceptable to add a small amount of surfactant, if necessary. Please include early sampling times of 1, 2, and 4 hours and continue every 2 hours until at least 80% of the drug is released, to provide assurance against premature release of drug (dose dumping) from the formulation. Specifications will be determined upon review of the data submitted in the application.

Finalized May 2008
